EXTRACT

From an Act prescribing Rules for the Government of the State Library, passed March 8th, 1861.

SECTION 11. The Librarian shall cause to be kept a register of all books issued and returned; and all books taken by the members of the Legislature, or its officers, shall be returned at the close of the session. If any person injure or fail to return any book taken from the Library, he shall forfeit and pay to the Librarian, for the benefit of the Library, three times the value thereof; and before the Controller shall issue his warrant in favor of any member or officer of the Legislature, or of this State, for his per diem, allowance, or salary, he shall be satisfied that such member or officer has returned all books taken out of the Library by him, and has settled all accounts for injuring such books or otherwise.

SEC. 15. Books may be taken from the Library by the members of the Legislature and its officers during the session of the same, and at any time by the Governor and the officers of the Executive Department of this State, who are required to keep their offices at the seat of government, the Justices of the Supreme Court, the Attorney-General and the Trustees of the Library.

CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XXXV. SAN FRANCISCO, CALIFORNIA: THURSDAY EVENING, APRIL 27, 1871. NUMBER 16.

The California Farmer
Journal of Useful Sciences.

PUBLISHED EVERY THURSDAY EVENING,

BY WARREN & DO:

OFFICE—No 220 *Clay street (up stairs) Below Battery*

SANFRANCISCO

TERMS OF SUBSCRIPTION.

By mail, for one year, $4; for six months, $2. For a Club of five new subscribers, a sixth copy will be sent gratis. When payments are delayed six months $1 additional per year will be charged, and $1 each year also for every year delayed. City subscribers, delivered by carrier, $5 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance. Payments in Gold or Silver.

☞ All letters on business connected with the office should be addressed to WARREN & Co. PUBLISHERS.

LIST OF AGENTS:

Our Subscribers can send money BY MAIL safely Register at the Post-office, and the money will come direct and sure.

WELLS, FARGO & Co., *at all their Offices in the State* POSTMASTERS, *in all places everywhere is not for us*

WHITE & BAUER, Washington Street, San Francisco.

VILMORRIN, ANDRIEUX, Co., Seedmen, Paris.

W. B. BANCROFT, Bookseller, New San Diego.

REARING GRAPE VINES IN POTS.

A horticulturist in Stuttgardt has devised an ingenious method of rearing grape-vines in pots so as to obtain grapes with very little trouble in a room or other sheltered place. For this purpose a vigorous healthy cutting of the late growth of the wood is taken, from three to five feet in length having at the upper and two fruit buds. The cutting is to be entirely enveloped with moss, and bound with bast, but so as to leave the extremity bearing the fruit buds uncovered. The cutting thus prepared is to be inserted spirally into a sufficiently large flower pot, leaving the fruit buds projecting above the edge of the pot, which is then to be filled with rich hot-bed earth well moistened, and placed in the sun behind a window and kept uniformly moist. The water applied should never be cold, but rather lukewarm, so as to stimulate to the utmost the development of the young roots. When the weather is such that there is no danger from night frosts, the pot may be placed outside the window or against a sunny wall, or even inserted in the ground, in order to secure a more uniform moisture and temperature. When the two fruit buds have produced branches, having bunches of grapes upon them, these roots are to be trimmed so that two sound leaves remain over each grape shoot, in order to keep up the circulation of the sap, since, without this the grapes would not develope. A single leaf would be sufficient, but two are better, for greater security. An occasional watering with a liquid manure is advisable in order to stimulate the growth of the plant, although this must be applied with care, since an excess will do more harm than good. In one instance a grape shoot treated in this way produced nine large bunches of fine grapes, although such a number would be rather more than could conveniently be supported by the plant.

THE MICROSCOPE.

The microscope, like most useful inventions has been brought to its present perfection, not by a single vault of inventive genius, but by slow and thoughtful steps of progression.

Microscopy, we have the initiatory number of a Magazine upon this Science, No 1 of "American Journal of Microscopy" a Magazine that is to be devoted to this Wonderful Science, which will reveal what *human Eyes* have failed to see before.

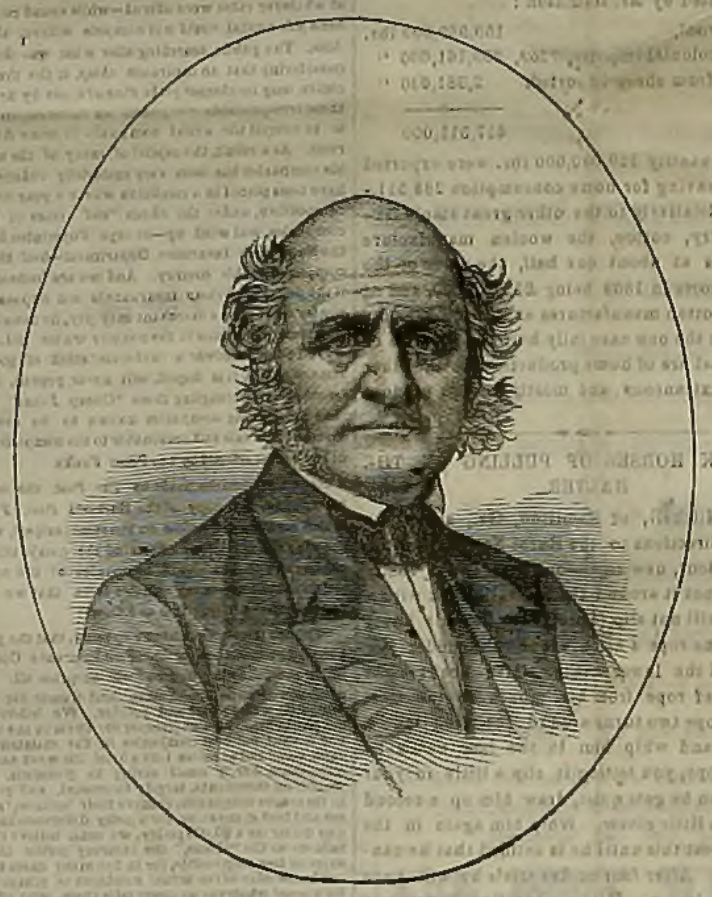
The Work is published by G. Meade & Co. Chicago, the Publishers have a field for their operations, as wide as Gods Universe, high as Heaven, and deep as the fathomless Sea, we bid them "God Speed" in their Enterprize, and wish them Success.

OVERLAND MONTHLY.

This excellent California Monthly continues to improve and maintain a high character, and with increasing *Fame* and Subscribers also. The May number is equal to any issued, containing a large amount of original matter of a high character. We rejoice at the success of the "*Overland Monthly.*"

HEATHEN CHINEE.

We are indebted to Messrs. J. H. Carmany & Co. Publishers, for a copy of a "Fac Simile" of the *Original Manuscript* of the "Heathen Chinee," as written by Francis Bret Harte for the "*Overland Monthly.*" The fame of this Poem will make it desirable as a Keepsake for the friends of this rising Poet.



MARSHALL PINKNEY WILDER.

There are few men in our community, whose lives afford a more striking example of what can be accomplished by the concentration of power and unconquerable perseverance, than that of MARSHALL P. WILDER. The bare enumeration of the important positions he has held and still holds and the self-sacificing labors he has performed, is sufficient evidence of extraordinary talent and ability, and of a magnetic personal power and influence, which alone could have enabled him to take the front rank as a benefactor of mankind.

Marshall Pinckney Wilder was born on the 22d of September, 1798, in the town of Rindge, N. H., a little village six miles south of the Monadnock. His father had removed to that place from the town of Sterling, in Massachusetts, in 1764, and opened a store in company with a brother, and it was here, amid the charms of rural life, that the character of Col. Wilder was developed and the strength and vigor of his constitution was formed. His early education was obtained in the public schools, to which he was sent at the early age of four years, though he afterwards, at the age of twelve, attended the academy at New Ipswich one year, and then studied with the village pastor till the age of sixteen, when his father gave him the choice of going to college, becoming a merchant or working on the farm. He chose the latter, and followed it long enough to gain that firm health and constitution which is, no doubt, the secret of the mental and physical energy which has since characterized his long and useful life.

But the business of the store had increased to such an extent that his services were needed there, and he entered, like a sailor before the mast, earning promotion step by step, and acquiring habits of industry, method and punctuality so important to success in life, till he became a partner in the concern and postmaster of the town.

Having a taste for military tactics, he joined the New Hampshire militia at sixteen, and rose rapidly in rank, being commissioned Adjutant at twenty-one, Lieut. Colonel at twenty-five, and Colonel of the Regiment at twenty-six. Subsequently, on his removal to Boston, he joined the Ancient and Honorable Artillery Company, with which he was many years connected, accepting the command which had been repeated offered to him and declined, in 1857.

In 1825, wishing a wider field of operations, he removed to Boston and established himself in the West India goods, trade, doing an extensive wholesale business under the firm of Wilder & Payson, in Union Street, and subsequently Wilder & Smith in North Market Street, and in his own name at No. 3, Central Wharf, where he was engaged in the wholesale importing business till 1837, when he became partner in the Commission House of Parker, Blanchard & Wilder, in Water Street, afterwards, Parker, Wilder & Parker, in Pearl Street, and some years after, Parker, Wilder & Co., Winthrop Square, a house with which he is still connected. In all this business career, he has, like all other merchants, passed through many periods of commercial embarrassment, but such has been his indomitable energy and integrity of character, that he has never failed to meet his obligations and maintain a high and honorable reputation which secured success.

But Col. Wilder had higher aspirations than to accumulate wealth. To amass a fortune was not the all-absorbing ambition of his mind. A wider field of usefulness and philanthropy opened before him, and though devoting a reasonable time and attention to business, all his leisure was given to horticultural and agricultural pursuits, and while cultivating his grounds, importing seeds, and trees and plants from distant countries, he was doing all he could to instil into the public mind a taste and love for rural labors and to elevate the rank and position of those engaged in the honorable employments of the farm and the garden. And it is by no means derogatory to the merits of others to say that the immense progress in rural ornamentation, the increase of beautiful rural homes and gardens filled with fruits and flowers, within a circle of twenty miles around Boston, the abundance of pears and peaches and apples and strawberries, which have filled the fruit stands and often at so low a price as to be within reach of the humblest citizen, is due to him more than to any other one individual.

The Massachusetts Horticultural Society was organized in 1829, and Col. Wilder, though not one of the original corporators, joined it one year after, and took hold earnestly with Gen. Dearborn, to make the Society a real and permanent blessing to the community.

The establishment of the beautiful Cemetery of Mount Auburn, was due to the Massachusetts Horticultural Society, and the arrangement by which, on the relinquishment of control over it, the Society should receive a fourth part of the net proceeds from the annual sale of lots, was chiefly owing to the indomitable perseverance of Col. Wilder, by whom a reconciliation of conflicting interests was effected, securing to the Society a large and permanent annual income, from which the Society has already received more than one hundred thousand dollars.

Col. Wilder was chosen the fourth President of the Society in 1840, and was re-elected to this honorable position for eight consecutive years. During this time, he was instrumental in securing the lot on School Street, and as President, laid the corner stone of the old Horticultural Hall on the 14th of Sept., 1844, a building which served the purposes of the Society for fifteen years, when it was sold to H. D. Parker, in 1858, for the sum of $70,000 a sum about double the cost, and the Society removed to its more spacious and elegant New Hall in 1865. During his administration, the exhibitions were sometimes closed with a grand festival, and these resulted in the Triennal Celebrations, three of which took place during Col. Wilder's administration, at those at Faneuil Hall, Sept. 19th, 1845, and Sept. 22, 1848, being especially remarkable for the magnificence with which they were gotten up, and the great number of distinguished guests who were present.

Among the more prominent of the horticultural labors of Col. Wilder, may be mentioned his experiments in hybridization. These researches were not confined to fruits alone, in which he gained a high and deserved reputation, but extended to flowers, where he made the Camellia a specialty, having many hundred varieties of this elegant plant many of which he originated with great skill. These efforts and the result of hybridizing are set forth in the Proceedings of the Massachusetts Horticultural Society, in a paper on "The Hybridization of the Camellia and its Varieties." He also contributed a paper entitled "Observations on the Camellia, with some account of its introduction into Great Britain and this Country," to *Hovey's Magazine of Horticulture, Vol. 5, p 13.*

He has been constantly importing many fruit trees from England, France, Belgium and Germany, sparing no labor or expense to get new varieties, and at the same time distributing with a liberal hand the best varieties by trees and grafts. Among the magnificent prizes which were the result of these untiring labors, is the Beurre d'Anjou pear, so widely renowned at the present time, imported and introduced by him. "In his orchards the pear," says Livingston, "occupies a place corresponding with that of the Camellia in his greenhouses."

It was natural, therefore, that on the establishment, in 1848, of the American Pomological Society, the fruit growers of the country should look to him as its first President, an office which he has held for twenty years. Space will not allow us to enumerate the labors, the address and the valuable papers, which he has, from time to time, contributed to the world through the medium of this Society. He still holds the high position of President, and is expected to preside at the next session to be held in Richmond, Va., in September next.

But we are more directly interested in the more strictly agricultural portion of his labors. On his resignation of the position of President of the Massachusetts Horticultural Society, he went to work to organize an agricultural society in his own county of Norfolk. We were present at the first exhibition ever held by that Society, one of the most remarkable we ever attended. The banquet on that occasion, when Col. Wilder presided for the first time, was a rare intellectual feast, with Gov. Briggs, Daniel Webster, Edward Everett, Robert C. Winthrop, Ex-Governor Lincoln, Ex-Governor Hill, of New Hampshire, Charles Francis Adams, Josiah Quincy, senior and junior, General Dearborn, Horace Mann, and many other celebrities. Want of space alone forbids a more extended notice of this extraordinary entertainment.

The next of his remarkable public efforts was to initiatory steps for the organization of the State Board of Agriculture as a Department of the State government, his labors in behalf of the establishment of an Agricultural College and of the United States Agricultural Society. He still holds the position of senior member of the State Board, and was President during the active life of the United States Agricultural Society, for six years, till the year 1858. His work for this Society was most wonderful. He was present at every meeting in Washington, where he delivered instructive, able and eloquent addresses, and at the exhibitions which were held in many different States. At the close of his connection with the Society an elegant tea service was presented to him, and at the next annual meeting the "Large Gold Medal of Honor" was awarded to him bearing the inscription: "Awarded to Hon. Marshall P. Wilder, Founder, First President and Constant Patron."

We should be glad to be able to allude to the Festivals of the Sons of New Hampshire resident in Boston, the first of which occured on the 7th of Nov. 1840, when Daniel Webster was President, and Col. Wilder, first Vice President; the second on Nov. 2d, 1853, when Col. Wilder presided, and delivered an address remarkable for its chaste eloquence and appropriateness. The Association again met on the 20th of June, 1861, to receive the Second Regiment of New Hampshire Volunteers on their route to the army. The Boston Cadets escorted them on their march to the Music Hall, where sixteen hundred partook of a collation at which Col. Wilder also presided and addressed them in touching and encouraging words which called forth hearty cheers.

There have been many other public occasions in which he has taken a prominent and honorable part shrinking from no labor however arduous, sacrificing self and contributing often liberally in many ways to instruct, to entertain, to elevate the people. Among them was the celebration the 4th of July, 1855, of the two hundred and twenty-fifth anniversary of the settlement of Dorchester, with Hon. Edward Everett, the orator of the day, with Governor Gardner, Dr. Walker, President of Harvard University, Hon. Rufus Choate, and many other distinguished visitors. Two thousand ladies and gentlemen sat down to a rare banquet in a mammoth tent, where a graceful arch encircled the front of the platform, decked with evergreens and flowers, with the inscription

MARSHALL P. WILDER,

PRESIDENT OF THE DAY.

"Blessed is he that turneth the waste places into a garden, and maketh the wilderness to blossom as the rose."

His recent efforts in behalf of the New England Historic Genealogical Society are well known. The rooms of the Society in Bromfield Street were well known to be unsafe as a depository of the immensely valuable treasures stored there, and Colonel Wilder, as Chairman of a Committee, took hold with his usual untiring energy, and in a short space of time the requisite funds to purchase and furnish a new lot and building, were secured, raising for this purpose $40,000 in less than four months.

Though having little taste or inclination for political life, Col. Wilder was elected to the House of Representatives from Dorchester in 1830. The next year he was a member of Governor Briggs' council, and the year following a Senator, and in the organization of the legislature, he was chosen President of the Senate. In fact that he possesses great ability as a presiding officer is abundantly shown in the eminent success that has always attended his work in this direction, and the prosperity of the numerous institutions over which he has been called upon to preside. His personal influence has been sufficient to magnetize a half dying form into new and active life.

And this strong personal characteristic is especially remarked among his friends. No one can approach him in doubt, in despondency, or in embarrassment, and leave him without higher hope, a stronger courage and a manlier faith in himself. We owe him many a blessing for that.

He still lives, thank God, in the midst of a united family, and surrounded by all that can make the evening of his days serene and happy. The energy that has impelled him to labor for many years still exists, and few men accomplish more than he. As an evidence of this it is sufficient to say that he still holds the following responsible positions, the duties of which he is always prompt to fulfill. He is President of the American Pomological Society, senior member of the State Board of Agriculture, a senior Trustee of the Massachusetts Agricultural College, Honorary President of the Norfolk Agricultural Society, a member of the Executive Committee of the Massachusetts Horticultural Society, President of the New England Historic Genealogical Society, a member of the Government of the Institute of Technology, a Director of the New England Life Insurance Company and of the National Insurance, and of the Hamilton National Bank, positions which he has held for thirty-five years, and senior partner of the firm of Parker, Wilder & Co. He has recently made a trip of observation to Europe, as Commissioner to the World's Fair, also to the South and to California, and reported at considerable length upon each, and is we believe contemplating a still longer trip to the Eastern continent.

The results of his observations on California have been given in a public lecture before the Norfolk Agricultural Society and the State Board of Agriculture, and the Mercantile Library Association of Boston, and so great is the desire to hear it, that invitations have been received from *Philadelphia, Portland, and other places.

We know of no man who can point to a prouder record of beneficent activity, to duties more faithfully performed, or to a life more completely filled up with labors more useful to his fellowmen. Long may he live to enjoy the grateful affection of his family and friends, and when the sunset comes to him as it must come to all, may it be peaceful and fragrant as the flowers he has loved so well.

*Since delivered to a very large and delighted audience.

To dream gloriously when you are asleep, and to bring angels down to converse with you when you are awake, you must labor in the cause of virtue and beneficence.

THE WOOL MARKET.

There is at this time a *furore* for *Wool buying*, and the purchasers are mostly from abroad, purchasing all they can find, at full and very liberal prices, and *we* think it will be well to *let them have the wool.*

Although we had quoted poor, common, burry wool at nominally low figures, yet it is a fact, all the most common kinds of wool, dirty tags, mixed or anything in the shape of wool, has been sold almost as high as fine wool *last year*, while choice wool, have brought *tip top* prices, as will be seen by our tables.

We learn also that even with these high rates, some of our Wool growers talk of "Holding on," this would be a sad mistake, for as sure as "Water finds its own level" so will *Foreign Wool* be poured into the State in large lots, which will bring down Wool again, to *last year rates*, now is the *wool growers time*, and we sincerely hope they will improve it wisely, for they should not be wool speculators, but wool growers only.

Agriculture.

EGGS SHIPPED SUCCESSFULLY.

[J. B., in "*The New York Poultry Bulletin*, writes to the Editor and gives his plan of packing eggs designed for setting. As but few persons may chance to have that paper, we give his plan for general benefit, and particularly now while we have quite a Poultry furore in our midst. We confess our pleasure, however, at the successful introduction of such superb birds as have lately been imported here by our Poultry men.—Ed. F.]

Mr. Editor.—As the time has come for shiping eggs for hatching, I will give my mode of sending them, which may be of some interest to the many readers of the *Bulletin*. 1st, Breeding fowls should have plenty of range, and be fed regularly. 2d, when the eggs are laid or soon after, they should be set on the small end (not Columbus fashion) in bran, if not shipped the same day, and be kept in a dry place above ground; cellar will not do. 3d, Make or procure a light box the required size, somewhat longer than wide, have some coffee sacking, or tow-cloth, set the box on the cloth and cut about four inches wider each way than the bottom of the box; tack the cloth on the sides of the box about one inch from the bottom, turn the bottom up, and take two rolls of hay about as thick as your arm; the rolls can be doubled up, or straight hay can be cut the length of the box; put the hay under the loose cloth, one bunch on each side, or edge of the bottom, tack the cloth down in the middle with carpet tacks, or lay a strip of leather on the cloth, so the heads of the tacks will not slip through; now finish the cushion by tacking the ends up nicely, turn the box right side up (cushion down,) have fine cut bright hay, fill the box two-thirds full, press tightly, set the eggs on the small end by making a hole with your finger, fill up with more cut hay rounding full, have your lid ready, *screw* it down. 4th, Take a strap and *screw* it on for a handle, the shape of a basket handle. 5th, Direct plainly, and mark "This side up," "Eggs to set," "Handle with care," "Delay not." (*I* mark with stencil-plates.) 6th, Take it to the express office carefully, and "let 'em flicker" to any part of the United States. I will insure them to hatch successfully nine times out of ten (if the hen does her duty,) after being shipped 2000 miles or more; for instance; I made four different shipments the two last seasons, to Utah, of 106 eggs—83 hatched, distance about 2000 miles. It seems impossible, but I have the "documents" to show the facts. It is some trouble to be so careful, or particular, but nevertheless, it gives *satisfaction*. The soft bottom and the handle is the great secret. If any one knows a better mode I would like to hear it through your valuable *Poultry Bulletin*.

FEEDING POULTRY

Onions are said to be an admirable food for fowls, or rather an adjunct to the ordinary food. If given regularly, it is said they will prevent the attacks of the more ordinary diseases of poultry. Meat is said by authorities to be an essential food for poultry, especially in winter, when they cannot get the worms they pick up in summer. Others, again, maintain that the habit of giving meat to poultry is productive of grave evils—the cause of many of the worst form of disease that effect them. By these authorities it is called an unnatural food, inasmuch as the digestive organs of the birds are not fitted to assimilate them. There must, we think, be some mistake in all this, or we know of a surety that fowls do eat when they can get it, and entirely of their own accord, an enormous quantity of animal food; here it is not cooked; the game found in nature's garden is raw. If meat is an unnatural food for poultry, they certainly have a most unnatural appetite for it. Throw in one lump of meat amongst a lot of fowls; if not literally a bone of contention, it is something vastly like it, so eager are all to get a grab at it. We believe the habit of giving much food in a short space of time to poultry is a very bad one. If you notice their habits you will perceive that the process of picking up their food under the ordinary, or what we may call the natural condition, is a very slow one. Grain by grain does the meal get taken, and with the aggregate no small amount of sand, small pebbles, and the like, all of which, passing into the crops, assist digestion greatly. But in the "hen" mode mode of feeding poultry, a great heap is thrown down, and the birds allowed to "peg away" at such a rate that their crop is filled far to rapidly, and the process of assimilation is slow, painful, and incomplete. No wonder that so many cases of chocked craw are met with under this treatment.

HUMORS OF THE DAY.

A Comic story is told of Dean Stanley's parrot, which was a great pet of the whole family. One day Polly managed to open her cage and get away, to the consternation of the whole household. After a great search, some one found Polly in the garden on the top of an apple-tree. The welcome news was communicated to the dean, who, with the whole of the inmates, rushed out at once, accompanied by Doctor Vaughan, who, with some friends, was then on a visit to the dean. Polly was found swinging herself in a topmost branch, but when she discovered the large audience below her, she looked gravely down at them and said, "Let us pray."

IRRIGATION OF LAND.

So much is now said and done upon the subject of Irrigation of our lands, that we select an article from *Cassil's Technical Education*, which presents some views which will be entirely new to many of our Farmers. This is a truly scientific sketch and will be found valuable:

Irrigation may be spoken of as the art of carrying water on to land in order to increase its fertility. This art has been practiced from the earliest times in all civilized countries. Water meadows have been established in this country for hundreds of years, but of late public attention has been aroused to the importance of still further extending the area of land thus treated. Although drainage and irrigation appear at first sight to aim at two opposite objects—the first to take water from the land, and the second to cause water to flow into it—yet they must not be looked upon as antegonistic. It indeed can readily be shown that while draining frees land from superfluous moisture, it is the means of causing a larger body of water than formerly to pass through any given section of the soil. The same rainfall descends upon the drained as upon the undrained field, but owing to the arrangement of underground channels, there is in the former case no puddling of the surface, no trickling over the land into contiguous ditches; evaporation is checked, and the land is dry, because the water has quickly passed through it. Drainage, therefore, is a means for altering the condition of water in the soil, rather than of depriving the soil of so valuable an element of fertility. By it a stagnant condition is changed into a state of movement, and full advantages of the rains are realized. Without it the land is water-logged, and showers, which ought to find their way down to the roots of plants, soak the surface and feed the neighboring gutters. The benefit of irrigation may likewise be traced to the constant change of the water as it pass over the surface of the meadow, giving up its riches to the herbage near which it flows. Thus drainage and irrigation may be shown to have much in common, and the idea of their being opposed to each other may be dispelled. Nay, further, as a preparatory step in the formation of water meadows, it is often considered advisable to under-drain the field, thus showing that the two operations, so far from neutralizing, may assist each other in improving the same land.

MIXING SOILS.

The time has come in California when some care and attention *must* be given to *feeding our lands*. A very large area of land at present used for wheat has been cropped three, five, and even *ten years*, and farmers wonder the soil does not produce well, the *soil is exhausted*.

The following valuable hints from the *Experimental Farm Journal*, will be found valuable to the wise farmer:

"There often exist on the same farm materials entirely separate from each other, which, if mixed together, would add greatly to the fertility of the land. A neighboring farmer had seven or eight acres of excellent black muck or peat, averaging several feet deep, which might have been underdrained at a moderate expense, and rendered a fertile field, but which the owner suffered to lie idle and useless year after year. Much of his adjacent farm consisted of dry ridges and knolls, out of which the vegetable matter had nearly or entirely disappeared, which might have been much benefited by this muck. The work could have been done in winter at little expense—but there, for half a lifetime, lay the great muck bed under water, and the dry ridges parched in the summer sun. All that was needed was mixing the different materials of the farm. Sub-soils are frequently quite different in character from the worked soil above. We once saw a striking illustration of this difference. An open ditch, some two feet deep and many rods in length, had been dug to drain a small pond. The earth taken from this ditch was thrown by the shovel, and scattered back a rod or more on each side over the surface of the field, which was afterwards sowd with wheat. The succeeding summer was unfavorable to this crop, and while the rest did not average a product of more than five bushels per acre, the portion which had been dressed with sub-soil yielded, by estimate, at the rate of twenty bushels."

RAIN.

Mr. R. H. Scott has described, at the Royal Institution, the three principal causes of rain and examples:—1, ascending currents of air which produce the great tropical summer rains; 2, the contact of hot damp air with cold ground, which makes the west coast of continents so rainy, and 3, the setting in of a cold wind after a warm one, and the reverse—as when a N. W. wind sets in after a S. W. wind, or when a S. E. wind follows a frost. The measurement of rain was next explained. An inch of rain over four square feet is equal to a gallon of water, or 10 lbs; over a square mile, to 80,000 tuns. The wettest place in the world is Cherrapoongee, where the falling is 600 in. take place in six months' Our rainfall at the sea level varies from 69 in at Cahirciveen, in Kerry, is about 20 in on the east of England. In mountainous districts it sometimes amounts to more—as much as 140 in at Seathwaite.—*British Trade Journal*.

They have smart children at Martha's Vineyard. A little six-year-old girl, daughter of a Methodist minister, committed a fault and denied it. Her mother, learning she was guilty, asked her why she told the untruth, when she replied with great *sang froid*: "I should not, if I believed as you and father do, but I am a Universalist."

"Let us clearly understand it: the sinner may offend much against others, but he always sins most against himself, every iniquity falling with morally debasing and destructive force upon his own soul.

MUTTON AND WOOL OF GREAT BRITAIN.

Very interesting statistics from our Sheep and Wool men will be found in the following statement made by Mr. Hamilton at the late meeting of the London Statistical Society, and reported in the *Mark Lane Express*:

"Although sheep are not kept in this country for their wool alone, but rather for the meat their carcasses furnish, yet as the sheet-anchor of British agriculture they are indispensable to the scientific farmer of the present day. As from a remote period we have been celebrated for our sheep, it is not likely that in the present day we shall retrograde in the endeavors made to maintain our superiority in the requirements for the British market. The value of the sheep slaughtered annually in the kingdom cannot be less than sixteen millions sterling; and it is satisfactory to know that, even in our colonies at the antipodes, the mutton is not now entirely wasted, but is becoming an exportable article as well as the wool and skins.

The consumption of wool in this country is thus estimated by Mr. Hamilton:

Domestic wool,	159,969,000 lbs.
Foreign & colonial imports, 1869,	255,161,000 "
Skin wool from sheep imported,	2,381,000 "
	417,511,000

Of this quantity 129,000,000 lbs. were exported in 1869, leaving for home consumption 288,511,000 lbs. Relatively to the other great staple textile industry, cotton, the woolen manufacture now stands at about one half, the value of the woolen exports in 1869 being £22,625 000, and of this the cotton manufactures exported £53,000,000; but in the one case fully half the supplies of raw material are of home production; in the other all are of extraneous and mostly foreign production."

TO BREAK HORSES OF PULLING ON THE HALTER.

Dr. T. S. Mitchell, of Hamilton, Ga., sends the following directions to the Rural New Yorker:

Have a stout, new rope—one that is not easily broken; knot it around the animal's neck with a knot that will not slip (I prefer the Texan's knot) then give the rope a hitch around the under jaw just behind the lower tusks. Give about eight feet play of rope from his mouth to the tree. Give the rope two turns around the tree; take a keen whip and whip him in the face until he pulls the rope, you letting it slip a little in your hand. When he gets quiet, draw him up a second time, and a little closer. Whip him again in the face. Repeat this until he is satified that he cannot get off. After four or five trials he will have learned the lesson. If the operation is properly managed, after the third to the fifth trial to get away, he will stand and allow you to whip him in the face, and never move his feet, and will never pull on the halter again. This is reliable. I have used it often with success

CHEAP INSURANCE AND ITS CONSEQUENCES.

[*From the Chicago Evening Post, Feb. 15, 1870.*]

A few days ago *The Post* made some remarks on the dangers threatening the insurance interests of the country—urging the public, as a matter of self-interest, not to let the idea of *cheap* insurance be the only one in view, but to endeavor to bestow it in such a manner as will support the reliable companies of the country. The public have for some years had the idea that insurance, like other patronage should be bestowed where it will involve the least outlay—and agents, bidding for patronage, have advertised to write policies *cheaper* than others. Of course, irresponsible companies could afford to write policies at much cheaper rates than sound companies, because they do not and have not given an absolute indemnity. If they have paid losses, it has been because of the accidental circumstance that, at the time, it *seemed* to the managers to be to *their* interest to pay; and the other accident, that the company had funds with which to pay. Companies started without capital, trusting to some accidental incident of business to earn a capital, and feeling that if such could not be done, its managers would at least get their hands on sufficient money to compensate them for the wear and tear of conscience and loss of time—companies organized and conducted on this basis, having everything to gain and nothing to lose, could, of course, afford to take risks at whatever rates were offered—while sound companies, with *bona fide* capital, could not compete without almost certain loss. The public, searching after what was *cheap*, and never considering that an insurance *cheap*, at the time of its execution, may be *cheaper* yet in case of a loss by fire, have given these irresponsible companies an encouragement so strong as to compel the sound companies to come down to their rates. As a result, the capital of many of the most responsible companies has been very materially reduced, and they have been placed in a condition where a year or two more of competition, under the cheap "cut" rates of irresponsible companies, will wind up—so says Superintendent Miller, of the New York Insurance Department—half the responsible companies in this country. And we are hastening to a day, if the delusion of *cheap* insurance is not exposed, when, no matter what rates a merchant may pay, he cannot find enough insurance companies in the country whose policies he *knows* will be paid, to cover a moderate stock of goods. Such a state of affairs, it is hoped, will never prevail, but can only be averted by strangling these "Cheap Johns" in insurance and patronizing companies known to be sound, at rates known to be safe and reasonable to the companies, regardless of the terms offered by the Peter Funks.

Since the remarks made by *The Post*, the other day we have received a copy of the Hartford *Post*, February 8th, which contains an article on the same subject, with statistics showing the disastrous effects of the competition with the cheap rates on the sound companies of the country. The article contains so many valuable facts, that we transfer it to our columns entire. It is as follows:

"Though it has often been repeated, that the year 1870 was a most disastrous one for the Fire insurance Companies, we think the following figures will surprise all. Those who complain of exhorbitant rates, and clamor for a reduction would do well to read and ponder. We believe it to be for the public interest, and cheaper for them in the end, to assist and sustain our best companies in the maintenance of fair rates—and not to nurse into a brief life weak and unreliable companies, for a small saving in premium. When our wealthiest merchants, largely interested, and even directors in insurance companies, remove their business from our oldest and best companies, for a petty difference in premium of one dollar on a $5,000 policy, we must believe that for such failures as the "Home," the insuring public themselves are more or less responsible, for in too many cases they act without knowledge of the actual condition of companies, but take for gospel whatever an agent tells them, who offers to insure at a low rate, looking more to low rates than companies' high standing. As a consequence, a large majority of insurance companies have been, and still are, selling their ware below cost. Is this true policy for the assured? Superintendent Miller, of the New York Insurance Department, is reported as having said, that a year or two more would wind up one-half the companies in the country. These figures, at least, furnish good foundation for such a prediction.

"From the advance copy of the *Spectator's* chart, compiled from the official returns, showing the standing of all the companies doing business in the State of New York, we find on comparing the net surpluses with the returns one year ago, that out of 141 companies, 88 show a loss amounting in the aggregate to the enormous sum of $2,563,000, a sum of which is, of course, attributable to shrinkage in assets.

All the foregoing applies equally to California, and it is very necessary that parties seeking actual protection by insurance should look well to the character and ability of Companies. The best is always the cheapest.

"*The following table shows the loss in the net surplus as compared with last year, of some of the leading New York Companies:*

Ætna	$45,000
Buffalo Fire & Marine	55,000
Commerce, Albany	11,000
Fulton	12,000
Home, of New York	74,000
Market	74,000
North America	42,000
Washington	33,000
Astor	40,000
Capital City	15,000
Continental	11,000
G	20,000
Irving	43,000
Merchants'	47,000
Republic	42,000
Western, Buffalo	18,000
Atlantic	14,000
Columbia	16,000
Corn Exchange	7,000
Hanover	18,000
Lamar	23,000
Niagara	52,000
Security	300,000
Yonkers	54,000

"*The following table shows the falling off of some of the Foreign Companies doing business in New York:*

American, Philadelphia	$174,000
Detroit Fire & Marine	3,000
Franklin, Philadelphia	63,000
Independent, Boston	55,000
Manufacturers'	87,000
Norwich	43,000
Boston, Boston	60,000
Eliot, Boston	10,000
Girard, Philadelphia	90,000
People's Worcester	17,000
Lancaster, Pa.	22,000
Merchant's Providence	33,000
Narragansett, Providence	36,000
Cleveland	7,000
Equitable, Providence	8,000
Hide & Leather, Boston	53,000
Providence, Washington	17,000
Rodger Williams	8,000
Springfield	6,000
Sun Cleveland	42,000

"*The following table gives a list of the agency companies showing a gain in net surplus of over $20,000:*

Lorillard	$47,000
Phœnix	81,000
Merchants', Chicago	33,000
North American, Philadelphia	132,000
Manhattan	95,000
National, Boston	30,000
Pacific, San Francisco	35,000

which list is lamentably small.

"*The following shows the losses in surplus of the Hartford companies:*

Ætna	$40,000
Charter Oak	18,000
North American	27,000
City	13,000
Phœnix	75,000

"*Companies showing a gain:*

Hartford	$110,000
Merchants'	7,000
Connecticut	24,000

"Thus out of 141 companies only eleven agg[regate] have shown a gain in surplus."

OIL CAKE MEAL

THE BEST FEED KNOWN

FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. This description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 16 per cent; Oil Cake Meal, 22 1-100 per cent. For life-saving properties to all stock exposed to sudden changes of weather or over-driving has no equal.

For MILCH COWS particularly valuable, increasing the quantity of milk and giving it a richness of cream greater than any feed known. A suitable quantity for the start at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food, generally mixed with the mash of bran, slops, roots, or any feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two gallons to one. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($35 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

PACIFIC OIL & LEAD WORKS,

NOS 3 AND 5 FRONT STREET,

San Francisco.

TRUE'S IMPROVED POTATO PLANTER,

This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed.

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of inestimable value because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

Horticulture.

PROPER WEIGHT FOR GRAPE VINES.

The Grape Vine can be over cropped like any other fruit bearing vine or tree, and in doing this the quality of fruit is correspondingly less in quantity, besides the injury done to the tree or vine for all coming years.

From that excellent little treatise on the "Grape Vine, published by *Clement Hoare, Esq.*, we extract valuable truth, and hope some of our careful Vine-growers will test it and report to us.

Scale of the greatest quantity of grapes, which any vine can perfectly mature, in proportion to the circumference of its stem, measured just above the ground:

Cir.	lbs.	Cir.	lbs.
3 inches	5	7 inches	45
3½ ditto	10	7½ ditto	50
4 ditto	15	8 ditto	55
4½ ditto	20	8½ ditto	60
5 ditto	25	9 ditto	65
5½ ditto	30	9½ ditto	70
6 ditto	35	10 ditto	75
6½ ditto	40		

It will be seen, that if 2½ inches be deducted from the circumference of the stem of any vine, the capability of it will be equal to the maturation of ten pounds of grapes for every remaining inch of girth. The proportionate quantity for fractional parts of an inch may be easily calculated.

The circumference of the largest stem in this scale is 10 inches, beyond which size I have had no opportunity of selecting a sufficient number of vines to enable me to carry the experiments further in a satisfactory manner. I have, however, at various times, examined a great many vines about that size, and have estimated the weight of their respective crops at the vintage, and when the whole crop borne by any vine has been perfectly matured, and a good supply of fine vigorous shoots for future bearing-wood produced simultaneous in the current year, the result has uniformly been that the weight of fruit has not exceeded the proportion mentioned in the scale. I think it not unreasonable, therefore to conclude, that the same proportionate quantity will apply to every vine, whatever may be the girth of its stem.

No vine is taken cognizance of, until its stem measures three inches in girth, as, under that size, vines ought never to be suffered to ripen any fruit. There is a rule that should be strictly adhered to in the management of young vines, for it may be safely asserted, that for every pound weight of grapes extracted from a vine before it has grown to that size, ten pounds will be lost during the next five years, independently of the very severe check which is given to its growth by premature bearing. But by husbanding its strength, till its roots have multiplied sufficiently to provide a full supply of nourishment without suffering from exhaustion, the plant commences its fruit-bearing life with a degree of vigor which lays a sure foundation for its future prosperity.

It may be remarked, that, in general, vines are suffered to bear a much greater quantity of grapes than the above scale represents, but in all such cases it will be found that they are not *perfectly* ripened. The grand desideratum in grapes, when used as table fruit, is *flavor*, and this is entirely regulated by the circumstances under which they are ripened. One of these circumstances is the quantity of grapes suffered to remain and ripen, as compared with the strength of the vine. The respective qualities mentioned in the scale are such as every vine of the given girth of stem can perfectly mature, but if these be exceeded, the flavor will immediately begin to diminish, and the vine may then be said to be overcropped. On the other hand, although a less quantity of grapes may be matured by a vine than the proportion represented in the scale, the flavor will not thereby be increased, in which case the vine will be undercropped. This, however, very seldom happens; but to go beyond the true bearing point, and to overcrop a vine whenever the quantity of fruit shown will admit of it, is a of universal occurrence, not only with vines trained on open walls, but with those under glass also. It is impossible to place this injurious practice in too prominent a point of view, for it is the prolific parent of almost every evil that can befal a vine, and it is really so general, that scarcely one vine in ten thousand escapes it.

Although, therefore, the proportionate quantities mentioned in the scale are much less than vines are frequently permitted to bear, they may be regarded as a close approximation to the greatest weight of fruit which can be borne, so as to be brought to the highest degree of maturation which the climate will permit. There may be a little increase in the powers of maturation of vines, when trained on very warm aspects, but I have never found it prevail to any extent, nor to be sufficiently uniform in its occurrence, to justify any variation in the proportions laid down in the scale. Some sorts of vines, also, are constitutionally disposed to show more fruit than other sorts, but the capability to mature the fruit is pretty nearly equal in all. It may be further remarked, that if a vine during any season be undercropped, the deficiency may be partly made good the following year, by causing it to bear a considerable portion of fruit more than its allotted quantity, as stated in the scale. This results from the sap not having been all expended in ripening the fruit; it has in consequence accumulated, and the plant is thereby enabled to mature a greater weight of fruit in the ensuing season, than it otherwise could do, from the sap generated in the current year.

The manner in which it is intended that this scale should be practically applied, is to measure the stem of a vine at the autumnal pruning, and to retain no more good well-ripened fruit-buds than is supposed necessary to produce the given weight of fruit that corresponds to its girt.—And if there should be any excess above that quantity in the ensuing summer, the crop must be reduced to the given weight, by cutting off a sufficient number of bunches, as soon as the blossoming is over and the fruit set, as the weight of it when ripened may then be easily estimated.

With respect to the number of buds that are necessity to be left at the autumnal pruning to produce any given weight of fruit, I have found it to be a good general rule, and applicable to all those sorts of grapes usually cultivated on open walls, to consider every bud (rejecting the two bottom ones to each shoot) as equal to the production of half a pound weight of fruit;—that is, if the stem of a vine measure five inches in girt, its capability is equal to the maturation of twenty-five pounds' weight of grapes, and, therefore, the number of buds to remain after pruning will be fifty. This proportion would, in general, be too great, even in the shyest-bearing sorts; but as accidents frequently happens to the bunches during their early growth, and as there will, in general, be some buds that will not burst, provision must be made against these casualties, by reserving a greater number of buds than would otherwise be required. The proportionate number, therefore, above-mentioned, I have found to answer well, and to be sufficient to meet all contingencies.

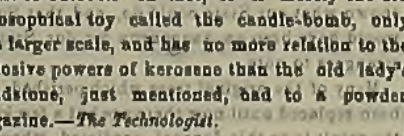
It is necessary to observe, that all the experiments on which the scale is founded were made on vines growing in 50° 46' north latitude.

EXPLOSION OF A FRUIT CAN.

A few days ago, a man placed a hot iron on the top of a tin can filled with preserved fruit, and in a few minutes the thing blew up with a tremendous report shaking the house, and, we believe, breaking the windows. From this circumstance, some of our would be scientific journals have concluded that fruit-cans are as dangerous as poor kerosene oil or gasoline, or at least that the latter are no more dangerous than the former, and we have actually seen this argument used by the vendors of a dangerous burning-fluid to prove that explosions are accidents anyway; that they are about as liable to be caused by one thing as another, and that it is no use for to deprive ourselves of the advantages of cheap lighting materials on account of them. The distinction, however, is that in the case of gasoline the danger is an inseparable accompaniment of the *usual methods* of using the article, while fruit-cans never explode if properly used. Grindstones, when made to revolve too rapidly, have been known to "explode" and kill people, but this fact did not justify the old lady who declared that she would not stay in the house until the old grindstone had been taken out of the cellar. Every sealed fruit-can is a small steam-boiler without safety-valve or outlet of any kind. In order to explode it, all we have to do is to heat it so hot that the pressure of the steam will be sufficient to burst it. In fact, it is merely the old philosophical toy called the candle-bomb, only on a larger scale, and has no more relation to the explosive powers of kerosene than the old lady's grindstone, just mentioned, had to a powder magazine.—*The Technologist.*

MARKET-GARDENING IN THE RURAL DISTRICTS.

The census often shows the drift of farm-life more accurately than any partial observation, however minute. It is quite clear, from the examination, that there is a decrease in the amount of live-stock in the New England and Middle States during the past decade, and likewise a decrease in the yield of staple grains, while there will be shown a large increase in the crops of vegetables and in garden products. This shows pretty conclusively that grain farming and live-stock raising, does not pay so well as some other branches of farming. The city and village population has increased, and the farmers in the immediate vicinity of these large towns are turning their attention more and more to supply their daily wants. They can sell potatoes and turnips every day in the year if they have them, and garden products all through the summer and fall. There is, however, a brisk demand for poultry, eggs, milk, calves, lambs, and swine, and they very properly raise what the market demands.—*American Agriculturist.*



GARDEN GROUNDS LAID OUT.

THOSE WHO WISH THEIR GARDEN GROUNDS renewed and replanted, or those who desire to have Grounds Designed and laid out upon Scientific principles and with correct taste and skill, as

Adapted to this Climate,

can have this work done to their satisfaction by calling at this Office, where all the best works on Gardening can be found, and where the various Styles, both European and American, can be seen. Grounds of any extent, from

ONE THOUSAND ACRES,

to small Gardens, in our City, will be designed and laid out and the TREES, PLANTS, Shrubs and Vines, and Bulbs all supplied of the very best variety and reliable quality, and the work done to complete satisfaction, by calling at the Office of the California FARMER.

None but Educated men ever engaged in such work.

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration, so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5.00

THE GARDEN VEGETABLES OF AMERICA. By Fearing Burr.....Price $3.50

CULTIVATION OF THE GRAPE. By W. C. Strong, of the Nonantum Hill Nurseries, Brighton. A complete guide to Grape Cultivation.....Price $1.00

FLOWERS FOR THE PARLOR AND GARDEN. By Edward Sprague Rand, Jr. Beautifully Illustrated.—Price.....$1.00

THE BOOK OF ROSES. By Francis Parkman. Containing all known Roses, with directions for the cultivation of all varieties worth growing. Beautifully illustrated.....Price $1.00

GARDEN FLOWERS AND HOW TO CULTIVATE THEM. By Edward Sprague Rand. With complete descriptions of all hardy and out-door Plants, Trees and Shrubs.....Price $1.00

THE PARLOR GARDENER. A Treatise on in-door Plants. By Cornelia J. Randolph.....Price $1.00

Gardeners, Foremen, Etc.

Those who desire to secure good and reliable Gardeners, Orchardists, Vine-pruners, and Foremen upon their Farms, can be supplied from our Office by sending notice of such wants, and giving us the special duties they desire performed, the wages they will pay, and all the particulars of board, washing, etc.

It will be our purpose to send out no person that is not fully qualified for the special duties desired, nor any man who is not of good character, nor shall we send out any man until, by a proper test, we know he is qualified in every respect.

Having long experience in this business and knowledge of what is wanted, we shall only give employment to the *Best Men.*

For our time, examinations, correspondence, etc., we shall expect a compensation that will repay us.

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us.

Farmer Office.

COMMISSION SALES-ROOM AND Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to fulfil them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should include satisfactory reference or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, several of which we have the exclusive sale for this Coast.

THE POTATOE PLANTER,
JEBB'S PATENT CHURN,
CHEESE CURD CUTTER
PATENT WEEDING HOE,
LIFTING HAY FORK,
WITH OTHER VALUABLE IMPLEMENTS.

☞ Every kind of implement will be purchased to order and shipped promptly, thus saving the expense and loss of time of a visit to the city.

OUR NEW YORK AGENCY.

TREE SEEDS

OF ALL THE VALUABLE KINDS.

Also,

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental Seeds.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference.

FLOWERING BULBS.

RARE AND CHOICE KINDS

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

Please remember that lawns can be made so as to be perfect at any season of the year.

FINEST MIXED LAWN GRASSES,
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

EVERGREEN AND DECIDUOUS SHRUBS, ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts

ORANGES, LEMONS, FIGS,

Peaches, Plums, Cherries, Apricots, Pears, Apples, Figs, Almonds, Walnuts, Nectarines, Grapes, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries,

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

These are grown at our residence under our own care where they always can be selected.

Any one desirous of having their Gardens look gay throughout the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

WARREN & CO.,
Farmers' Headquarters, 320 Clay Street, upstairs.

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING, APRIL 27, 1871.

THE CALIFORNIA FARMER READING ROOM AND MUSEUM OF NATURAL HISTORY.

220 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit attractive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them or their examination, hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

☞ Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

OUR NEW YORK AGENCY.

Geo. P. Rowell, & Co., 40 Park Row, New York

AND

S. M. Pettengill & Co., New York

Are the Sole Agents for the CALIFORNIA FARMER in that city. They are authorized to contract for our Journal for the Advertising and make Collections for the same at the very lowest rates.

Our many Patrons in that city and State are requested to call on them, give their business to them and subscribe for our Journal which will always be found on file at their READING ROOMS.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* of *our Journal*, to which we would direct their *special* attention.]

Our readers will find matters of interest for them of a practical character in every Department of our Journal this week. We ask that they will review the Departments of Agriculture, Horticulture, the Miscellaneous, and the Home Department. In each and all we are confident they will find solid matter, worthy their perusal.

Our absence from Office all the week among the Grain fields will excuse us for want of budget of items.

We are greatly indebted to Hon. Horace Capron, of the Agricultural Department at Washington, for a very choice collection of New Vegetable Seeds, and also a very choice collection of *Flower* Seeds from France.

We are again indebted to Hon. Eugene Casserly for Documents from Congress.

Also to Hon. Cornelius Cole for same favors.

To Hon. Charles Pomeroy we are also indebted Congressional Documents.

NEW BOOK ON THE FEET.

We have received a Volume from Messrs. A. L. Bancroft & Co., entitled "Dress and Care of the Feet." We shall gladly copy from its pages shortly, for such a work is greatly needed. It is published by S. R. Wells, New York, of the well known Phrenological Book Store. The Book well illustrates the subject, and should be read by all. Bancroft & Co. have the book for sale.

HON. MARSHALL P. WILDER.

We give in our present Number a sketch of the noble Life deeds of one to whom every AGRICULTURALIST, HORTICULTURIST and FLORIST in our Country is more or less indebted for the great advance made in these sciences, and the grand results flowing from his long life labors to benefit his Country and his fellow-men.

The very interesting sketch we give was furnished us by that excellent Journal the "*Massachusetts Ploughman*."

The Friends of Mr. Wilder, and their name is are countless, will remember his visit among us last summer, they can now have a perfect likeness of him, and also a sketch of his life-history worth preserving. We issue a large edition so that all can be supplied.

It has always been our custom whenever we publish Very Important Matter, like our present Number, to send *Extra Numbers* to such persons as we think would appreciate them, and who would see that the numbers we send them, will accomplish good.

Copies of this Number can be had of our Agents and at this Office.

We hope also that many to whom we send may favor us with their names as Subscribers to our Journal, and use their kindly influence for extending it circulation in their neighborhoods.

The CALIFORNIA FARMER now circulates over the whole Pacific Coast, in every State in the Union, and in all parts of Europe, thus giving our friends a rare chance to make the interests of California widely known.

BEAUTIFUL SPRING TIME.

Harper's Weekly, of April 22d, contains a very beautiful Illustration to represent the Season of Spring.

The Harpers say of this picture, that it is from the graceful pencil of Paul Frenzeny, representing Spring, under the guise of a lovely young woman, shutting up old Winter into the gloomy cavern to which the old fairy tales used to banish him, reminds us of a sweet German poem by William Muller, which was several years ago translated by the late Mrs. H. C. Conant. Though the poem does not follow out the imagery suggested by the artist, there is such a harmony of sentiment in these creations of the fancy that our readers will be glad to find them together. The poem is called

SPRING'S ENTREE.

Haste! open window, open heart;
Quickly, oh quickly!
Old Winter seeks a passage out;
He fidgets anxiously about,
Goes round the house with bustling air,
And picks his duds up here and there:
Quickly, oh quickly!

Haste! open window, open heart!
Quickly, oh quickly!
Spring knocks already at the door;
Hark! 'tis his cheering voice once more—
He knocks with all the force he may,
With his little meadow-flower bouquet:
Quickly, oh quickly!

Haste! open window, open heart!
Quickly, oh quickly!
And if you are not prompt to hear,
He has his train of servants near:
He'll summon them to help his will,
And knock and beat more loudly still
Quickly, oh quickly!

Haste! open window, open heart;
Quickly, oh quickly!
Lo! Morningbreeze, his herald, view—
A puffed-cheeked boy, of rosy hue—
He blows till all things stir and ring,
For entrance to his master, Spring!
Quickly, oh quickly!

Haste! open window, open heart;
Quickly, oh quickly!
The brave knight, Sunshine, now appears,
And breaks his way with golden spears;
While the soft flatterer, Flowerbreath, slinks
Through narrowest crevices and chinks:
Quickly, oh quickly!

Haste! open window, open heart;
Quickly, oh quickly!
Now sounds the onset, Philomel;
And hark, and hark! an echo's swell—
An echo from my inmost breast—
In sweet Spring joy, a welcome guest:
Quickly, oh quickly!

THE SEASON, CROP, &C.

The Drought! The Drought! The Northers! The Northers! with No Crops! No Crops! and high prices, now seem to be the prevailing topic.

While this talk is general, and while the consequences resulting from these reports will have their effect, it must be a great blessing to the whole community if our leading Farmers, our large Cultivators, would carefully collate and report particularly their manner of cultivation, all would then have the effects which have followed causes, and all the lost crops would in a manner be well accounted for.

The Grain and Flour market will undoubtedly be more or less effected by the rumors and complaints that come to the public mind by reports of the effects of the last "Norther" and the effect of the drought upon the crops. There can be no question but that these continued scorching and drying north winds have seriously damaged crops in various parts of the State. We have seen the results ourselves by a visit personally from this city through the Livermore Valley to Stockton over the Calaveras region, thence to Sacramento, and thence over the Marysville route and downwards through Napa, Sonoma, Vallejo route to this city, also San Mateo County, the Santa Clara region, San Jose surrounding, and upwards over Alameda County, and over all these routes we have very carefully noted the kind of cultivation given to the land, and learned the time of plowing and planting, the depth of plowing and all appertaining to the cultivation of the soil, the *continuous years* of cropping, and this too with the *same crop*, and without giving back to the soil any kind of nourishment, and in most cases with the same depth of cultivation year after year.

While we freely admit that blight has touched many crops which will be a serious loss and in many cases a total failure, we look to the large increase of acreage planted this year, and well planted, and to the improved tillage of a good portion of grainfields to *make up the loss* of those fields which yield little or nothing by reason of shallow and bad culture and late planting.

Those of our Subscribers who have perused the columns of the FARMER for the last dozen years or more, will well remember how earnestly we have advocated DEEP, and THOROUGH CULTIVATION, and this plan too, while it was almost ridiculed as chimerical for our dry climate. The FARMER also for long years has urged the practice of plowing deeper and deeper each year, with CHANGE OF CROPS and also SUMMER FALLOWING the land.

The FARMER has also for long, long years urged the plan of *early planting*, planting on dry soil so that the crop could receive the benefit of the early rains, and thus be not only a *Volunteer Crop*, but a *Cultivated* one, a truly natural grown harvest field, and by this plan securing all the benefits of the season, the same as our native OATS, GRASSES, &c.

The losses suffered this year, heavy as they may be, will result in future good by awakening a more general and certain attention to that kind of Cultivation, without which no one has a *right to expect a harvest*.

MAY, THE GALA SEASON.

"May Day" is hailed as the day when the "Goddess of Flowers" holds her high Carnival Season, when every bud and blossom pays court to this Season of Spring.

The Season of blossoms in the Spring time is most truly and beautifully pictured by the Poet "Willis" who is now among the "Living Flowers" of the Eternal City. Says the Poet.

There is to me
A daintiness about these early flowers
That touches me like poetry.
They blow out with such simple loveliness among
The common herbs of pasture, and breathe
Their lives so unobtrusively, like hearts
Whose beatings are too gentle for the world."

To all who truly love nature and worship at her shrine, the heart feels the words of another Poet, who says:

"Oh, the flowers look upward in every place,
Through this beautiful world of ours,
And, dear as the smile on an old friends face
Is the smile of the bright, bright flowers!

From the earliest days of Science, Literature, and Art, Flowers have more or less been used Emblematically to speak a language and convey Sentiments that no other created thing could represent, they crown the "Birth Place" of the *new born*, they wreath the brows of the *newly wedded* on their "Bridal Day" they are used to revive and keep alive sentiments of Love, Affection, and Respect, at the annual returns of family "Birth Days," and they finally rest upon the bier of "Loved Ones," when their mortal remains are gazed upon for the last time on earth.

Flowers are the sweetest, and truest Emblems of Love and Affection, of any Creation in nature, for they truly represent Humanity in its Life, Death, and Resurrection.

"May Day" is near at hand, already on every side preparations are now making for a great and joyous "Gala Day," Society with its teeming millions, nearly all take more or less interest in this great *Inaugural of Spring*.

California May Day presents quite a contrast with the "May Day" of New England, and the Middle States, there their backward Springs often require the May Flower seekers, to hunt for some time in the fields, before they can find the *first* flower while here in our own flower Crowned Hills and Vallies, miriads of floral gems mark the whole Earth, a carpet of the most beautiful colors, and flower crowned children, numerous almost as the wild flowers and almost wild and joyous, make the May Day Festivals of California, scenes of great and joyous merriment.

May Day this year falls on *Monday* next—when over the length and breadth, of our bright Vallies, a picture will be seen of Life and Joy, of Beauty and Brightness, just like the picture of which we speak about, as presented in Harper's Weekly, which most truly presents "Spring Time" "May Day" and the "Floral Worshippers."

"May Day" this year in California, will be universally observed by the "Little Ones" and also by many "Big Ones" who will "hie to the country for Happy scenes.

We rejoice that it is so, we trust it will always be so, and if amidst these great gatherings, there maybe confusion, noise, commotion, and a little trouble, there will already be found "Good" to grow from these festive scenes among the Flowers, more than enough to balance all the Evil arising from those who having no "Love of the Beautiful" in their hearts, are like the "Dog in the Manger" they would prevent others from the food they cannot enjoy themselves; let a prompt *Rebuke* always be given to all who would *disturb* those happy gatherings, or throw any impediment in the way of a Happy enjoyment of our glorious "MAY DAY FESTIVALS.

A PIONEER FURNITURE DEALER.

Purchasers of Furniture, as they pass up Washington street from the Post Office, will see on the right hand side of the street, opposite the Market, the name of JACOB SCHREIBER, who long years ago was well known, as the large and only Importer of Pelu, and also the extensive manufacturers of Spring Matresses and Bedding, as also a large Furniture Dealer.

The old Friends and Patrons of Mr. Schreiber, will gladly hear that he has taken a large and fine Store, and again invites them to call on him. (See his card.)

SPLENDID POULTRY.

A very splendid collection of Poultry of the choicest breeds, which have just been imported by Geo. E. Bailey, Esq., Poultry raiser at Oakland was on Exhibition on Sansome street last Thursday.

It is but just to say, they were the handsomest lot of Poultry yet been shown. There were 20 Light and 20 dark Brahmas, splendid large Birds.

Sales were made as follows, One Trio for $125, One for $100, and Five splendid Dark Brahmas of superior blood, for the handsome price of $375.

The Exhibition was very creditable to the Importer, and valuable for our State.

KERN RIVER COUNTRY.

We call special attention of our readers and particularly all who are seeking lands to settle on to the letter of our kind correspondent, from Kern River who takes a correct view of Agricultural matters on all subjects, he writes open, we hope to hear from him often.

LANDSCAPE GARDENING.

The mere preparation of the soil and planting trees and shrubs upon the soil, and filling up spaces with statues, fountains, fancy arbors, and rural chairs, is not Landscape Gardening, nor is it gardening at all; it is fancy work and wasting of time and labor and expense, which after a brief time, reveals to those who have "footed the bills" that the work not being half done, must be done over again.

A True "Landscape Gardener"—one who *Opens from Nature*, a real lover of the beautiful, one who truly knows his business, will at the first view of the grounds designed to plant and beautify, have a good conception of his plan by the size and form of the land, and also the size and style of the buildings on the grounds, together with all the undulations of the land whether great or small, and also the distances of the several buildings from streets or public highways, Lakes, Rivers, or Pond of water, for all these have to be a part of the Landscape *Picture*, which he is to complete, and these all are to be carefully viewed with the measuring rod of a true Artist's eye equally careful as he who with *brush and pallet* prepares for the critic's eye *his* picture upon the canvass.

The great majority of garden grounds, large and small, those that have been prepared even at great expence, are spoiled utterly by the planting of trees inappropriate to the space and unsuited to the locality. Often a large growing tree in a small parterre, and a small one in a large place, a tall growing one beneath a window that shuts out light, and a small growing one at the entrance gate. And the same error exist in planting the varieties of trees *evergreens* and deciduous trees, as also the ill-assorting of the various classes of trees, shrubs, vines or flowering plants, and these serious errors are being constantly made in some of the best located grounds that could be made truly beautiful, and in our public places, Parks, Squares, College Grounds, &c., and these errors arise by employing those who have neither taste, skill or judgment, and knowing nothing of "Landscape Gardening" know but little of the nature, character or the form and growth of the trees they plant. They may handle the spade, dig and rake, and they may call themselves Gardeners, but they know nothing of the science of "Gardening," and often cannot tell one tree from another in its habits of growth, and sometimes cannot even read or write, and it is by reason of ignorance and want of skill that many spots where nature stands ready with a little aid from a skillful hand and a practiced eye, to make a paradise from a waste.

Our citizens are now talking of a "Central Park," we hope when we have a "Park" it will not be located where the "Northers" will change the surface, in a "night time" to a *sand drift*, like "Black Point" for millions can be squandered in vain, if the location and soil shall not be fitted for the design.

Our "Plaza," Portsmouth Square, is a *pretty green spot*, but the passers by will often say it looks like a *grave yard*, and this arises from the character of the trees planted, and the error in their pruning. A totally different character of trees and greater in variety should have made *that spot*, a *Representative* of sample trees, shrubs and vines *from every County* in our State, with names of each and their locality upon labelled stakes at the base of each. This would have shown what our State could do, and that Square would have been an Ansgarium for our State for strangers to note.

Many of the original trees which perished, have been replaced until now there are but a few kinds, the result is as this Journal predicted when that class of trees were planted.

Our Post Office yard is another case of bad taste and worse work, in the unfitness of the soil first, and in the bad judgment and unfitness of the variety of the trees planted, and as this Journal pointed out the time the trees were altogether too large in their natural growth for so small a place, those grounds were more fitted for a *Shrubbery* than a *Park*, a few outside trees of proper kinds and suitable ones inside would have now shown a handsome spot, now it is a very doleful picture, a daub, a ruin, and before it ever can be fit to be called by a pleasant name, all the large trees, save the Elms, must be removed, the soil changed, and the work done over again.

We point to these *two places* in our City more with a hope to rectify in the future a serious error too common in the laying out of Garden Grounds, than to complain of a grevious error and waste of money that is now too late to help.

"A Thing of *Beauty* is a *Joy* forever".

But a *badly planted Garden*, never, O never!

We find some very practical and true ideas in a little pamphlet kindly sent us by H. W. S. Cleveland, Esq., Landscape Gardener, of Chicago. We here give his remarks on the subject:

The prevailing idea in regard to landscape gardening, seems to be that it is merely a decorative art, whose province is comprised in the adornment of professedly ornamental grounds, such as the parks and pleasure grounds pertaining to cities, the demesne of public institutions, and the private estates of men of wealth.

It is regarded as an expensive luxury, beyond the reach of men of moderate means, and inappropriate to the wants of a new country whose material necessities demand primary consideration. This narrow conception of the legitimate scope of the art, has resulted in no small degree from the fact that many of its nominal professors are uncultivated men, who have no idea of the development of natural beauty as a means of rendering a place attractive, but rely solely upon artificial decoration, and measure the perfection of their work by the number of curving walks, fancy flower beds, fountains, statues, vases, grottos, arbors and rustic seats they have contrived to introduce,—any or all of which may at times be appropriate, and may add to the general attractive effect, when in keeping with the character of the place, and the general style and habits of its occupants, but which can never render a place beautiful which possesses no intrinsic expression or character of beauty, while they are liable to excite the same sense of the ridiculous which results from a profuse display of jewelry on a plain person. People of common sense, with an average share of natural taste perceive the inconsistency and absurdity of such a display under ordinary circumstances, and also that it is not only expensive in the first place, but involves continual care and labor in the future, and as a principal object in seeking a country residence is to escape from the restraints of city life and secure the ease and freedom of a rural home, they revolt at the thought of an elaborately dressed place as necessarily inconsistent with the comfort they are seeking, and naturally shrink from employing a landscape gardener whose duties they suppose to consist in providing decorations which they do not want. The existence of such a feeling is in itself a favorable omen. It is the instinctive protest of simple, natural taste, based upon common sense, against the tawdry display which is attractive only to uncultivated minds, and is inconsistent with the tone of life and prevailing characteristics of a new and growing country, in whose development so many nobler objects for the use of wealth are urgently pressing their claims for consideration. A relative proportion should be preserved between the style of lifting up the estate and the condition of the country around it.

We should say in addition to the above, that a practiced eye will also preserve *proportion* of the *whole grounds*, buildings, scenery, &c., by the size of his Circles, Ovals, Squares, by the character and size of the trees planted in them.

A NEW EXPLOSIVE.

The following singular discovery of a new Explosive, as is here reported in the *British Trade Journal*, it would seem to be applied entirely to the *War Interest* and the destruction of human life and waste of property.

Messrs. Gebruder, Krebs & Co., Cologne, explain some successful experiments with a new explosive called litho-fracteur. Of these, fifteen were made under every disadvantage—in mud, in water, and in every possible way conforming to the exigencies of war, to the entire satisfaction of the Commission. Lieutenant-General Von Kameeke, who has since earned such laurels in the late war, immediately saw of what immense importance litho-fracteur would be in warfare, as a trench 10 ft to 15 ft broad and 5 ft deep, and of any length, and on any ground, however frozen or stony, could be thrown up in a minute, and so a sheltered position for artillery, cavalry, or infantry be immediately obtained by a loose layer of strong litho-fracteur. In fact, if every soldier carried a cartridge filled with this explosive, a whole army in a moment of need could intrench itself in positively no time. The discoverer of the combination of mixtures of which litho-fracteur consists has constructed a torpedo, which, drifting nine miles in any direction, to a depth of 10 ft has shown a power of destruction beyond description, so much so as to prove that no vessel, however heavily armored, could exist one moment against its action.

We would offer a far better use for such a discovery if it should be found to work successfully. We would direct the attention of our Civil Engineers to it for the purpose of throwing up Levees, and thus reclaiming millions of acres of Swamp Lands, and shield Humanity from the disasters of Flood and Ruin. It would also answer to open Canals, throw up material for Railroads, and thus carry such enterprises forward to a more rapid consumation.

We call the attention of the Managers of the Central Pacific Railroad, and all other Railroad Managers, and also our "Swamp Land Commissioners," and those planning Canals and Leveeing our "Swamp Lands" to this Invention as this will prove a great Implement for them.—ED. F.]

He is not only idle who does nothing, but he is idle who might be better employed.

The chains of habit are generally too small to be felt till they are too strong to be broken.

There is no sin we can be tempted to commit, but we shall find a greater satisfaction in repenting than in committing.

ANOTHER LOT OF POULTRY.

A very fine lot of Prize Poultry was shown by Mr. Finley, the Manager of the California Poultry Breeders' Association, the last week at Leidsdorff Street. Splendid Light and Dark Brahmas, Buff Cochins, and Spangled Hamburghs. Although we have seen fine Birds before, we feel assured these Buff Cochins, and Light Brahmas were the largest, bravest and best yet shown. They sold readily at high figures.

About $5,000 have been subscribed to the new Association, and Mr. Finley leaves in a few days for the East to procure and bring out a very large collection of Poultry, the best that can be found.

MARKET STREET FURNITURE WAREHOUSE.

We call attention to the large advertisement of Messrs. Rohr & Son, who have succeeded to the business which had been carried on by Schreiber Rohr & Co., at that place.

This firm have a large and Spacious Store, and a very extensive Stock, they say they are now ready to make large contracts, for supplying at the very best rates and invite all to call and see for themselves, for they assure them, they can suit all taster.

The State Agricultural Society, the Mechanics Institute Fair, and the Horticultural Fair, will have attention in our next.

Many Advertisements that came to us we were obliged to lay over till next week.

Home Correspondence.

COTTON IN KERN COUNTY.

Rio Bravo Sheep Ranche,
April 20, 1871.

Editor of the Farmer:

It may be remembered that Cotton, continued to advance in price, from 18 cents per pound to $1.75 cents during the war. Thomas Skiles, a neighbor of ours, cultivated a patch of Cotton, from 1860 to 1864, in the same field, which proved a success. This fact stimulated my sons, Elijah Livermore, and Julius Chesley, to try the experiment on a larger scale, consequently, in the early part of 1865, they commenced to clear and prepare the ground for a larger breadth of Cotton. Sent on to Tennessee and to Mexico, for a sufficient amount of seed, which arrived in good condition. The planting commenced, the last of April, and continued on into June, 133 acres well fitted for the seed, and several miles of ditch were opened to irrigate the ground, about forty acres of Mexican seed was first drilled in, then came the Tenessee, and Sea Island, Chinamen were imported, to do most of the tilling and irrigating labor. The Cotton field was well attended, and grew up masterly, old cotton growers pronounced it to be equal, in the stand, to any field in the older Cotton States. The whole formed squares and boiled well. It was planted on alluvial bottom land, a portion on a sandy wash of the old Kern River head. The firm soil produced the largest plants, but the whole field was promising, the average height of the plants, at maturity varied from 3½ths to 4½ feet, some portions, the cotton plants stood six feet in height, all on new land, now, as to the result, but little of the Sea Island matured before the frosts set in, one reason was, the seed was cast into the bosom of the Earth two months too late, in the Spring. This circumstance was unavoidable that year, then again, the whole field was under irrigation three weeks too long, for which there was no need. The Mexican seed coming from a more Southern Clime, though planted firstly, boiled full, and completely, but, was, in point of time, several weeks later than the Tenessee, which was full of bolls, a while the Mexican, was in squares. It proved conclusively that seed of the Mexican Cotton, should first be acclimated, but better still to plant the Tenessee in every event, and plant in March and April, as soon as the frosts disappear, of the latter, several hundred pounds of seed cotton were gathered to the acre, but not half the quantity that it would have produced, if it had been sown in April, the season was sufficient in length, if the company could have commenced in time to prove a favorable result, many bales were forwarded to Oakland and worked into strong cloth, the manufacturer paid 25 cents per pound.

There is an abundance of land in this Valley, and Kern River basin, which would produce all the various kinds of textile plants, seeds and fruits, of the temperate zones, and many that are indigenous to a more Southern Clime, if protected and put under proper culture and location, but, little, however will be done, by the way of cultivating the rich soils in this section of the State, (so barren of wood and timber, that can be procured only by great expense,) until we can be secure from the devastation of the hundreds of thousands of cattle, that roam at large over our unsettled country.

In seasons of intense drouth, like the present, there seems to be no barrier of sufficient magnitude to prevent a certain waste of time, and crop. Good Farmers will not attempt to settle and cultivate these rich inexhaustable soils, which are so abundantly lying to waste, so long as this fear exists about the coming crop, if they knew that their business was certain, good living settlements would be found dotted here and there all over this rich agricultural Country, where the Steam horse will soon be plowing its way, on the rail, through our midst, and until we have a "no fence law," placed under the fostering care of the Government, settlers are not coming in.

Respectfully submitted,
SOLOMON W. JEWETT.

SPURIOUS COFFEE AND SPICES.

NEW DEVELOPMENT IN ADULTERATION

In our last we referred to cream of tartar, without any cream of tartar in it, as one of the latest "dodges" of adulteration—if adulteration—it could be called. We have since read of another sample of the same article which contained more than 90 per cent. of sulphate of lime, and not one particle of bitartrate of potash. It would have been dear at five cents a pound, and was sold as "extra fine" at fifty-five cents.

There has also been a new development in the adulteration of coffee. People have flattered themselves that if they bought the coffee beans raw, and roasted and ground them at home, they were sure of having the genuine Mocha or Java; but artificial coffee beans are now made, like bricks, from a greenish clay, and the eye cannot distinguish them from the natural article. They are made in molds, a hundred at a time, and cost about a cent a pound. When roasted they absorb brown color from the genuine berries with which they are mixed, and the true and the false are still undistinguishable. This admixture of clay is not injurious, as it settles to the bottom of the coffee-pot, giving a literal significance to the term *grounds* as applied to that familiar sediment. The beverage is weaker, of course, but otherwise no worse; indeed, we suppose that some dietetists would say that it is all the better for the inert addition to what they consider an unwholesome decoction. The fraud may be detected by breaking open some of the raw berries and examining them closely, or by chewing them; or as some one has suggested, you can make a microscopic examination of the interior of each berry!—*Boston Journal of Chemistry.*

The Sun's First duty on rising—To strike light.

BREAD VERSUS TOBACCO.

Here is a fact for the consideration of all who regard the welfare of humanity, by statistics carefully prepared it is found that *Bread* costs in New York City $8,500 daily and Cigars cost $10,000, the cost of Whiskey and other Liquors, are not given, probably they are equal to both sums.

The consumption of Tobacco, costs the people of the United States over $600,000,000 annually, or almost one third of the National Debt.

What a commentary upon the *habits* of an *Enlightened* Nation are such facts.

TOBACCO IN GREAT BRITAIN.

The unmanufactured tobacco imported into Great Britain during 1870, amounted to 52,588,590 pounds, of which 37,046,032 pounds came from the United States, and 15,542,558 pounds from the Hanse Towns, Holland, Greece, Turkey, Japan, Cuba, New Grenada, and other countries. During the last ten years, the largest importations into Great Britain were during 1865, when they amounted to 65,034,857 pounds, of which 35,549,768 pounds were from the United States. The supply of tobacco from the United States has fallen off very much since the war of the rebellion, but the general importations of 1870 into Great Britain had risen nearly 100 per cent. over the previous year and had augmented the supply of both stemmed and unstemmed kinds from 28,631,433 pounds to 37,046,032, a rise of 36 per cent. This rise, it is stated, is owing to the increased importation of the "stemmed" variety, or as it is called, "Western stripe." The importation of tobacco from all others countries into Great Britain is still continuing to fall off, and has reached the lowest point it has ever attained since 1760. As a revenue producing article in Great Britain, tobacco during the last financial year brought into the treasury the sum of $33,043,630, as much as the duties on tea, coffee, cocoa, fruit of all kinds, refined sugar and molasses all included. The net total of the British customs revenue for 1869 produced $107,249,315 one-third of which was raised from tobacco and snuff.

A paper called *The Tobacco Plant* has recently been started in Liverpool. It must be a good paper for "puffs."

A once reputable German poet, scholar and philosopher, for many years the associate and friend of distinguished men both in this country and in Europe, is now serving as a porter in a hotel near Detroit. Rum did it.

The Detroit papers have discovered a new method to driving away the organ-grinders. Every day or two they have a small paragraph like this: "Organ-grinders in Memphis make about ten dollars a day."

MOST
IMPORTANT IMPROVEMENT
EVER MADE
ON
Sewing Machines
CAN BE SEEN IN USE AT THE
HOWE SEWING MACHINE
OFFICE,
No. 113 Kearney Street.

READ THE FOLLOWING INDORSEMENT,
signed by some of the most
Prominent Physicians:

"We the undersigned, practicing Physicians of San Francisco, having examined and witnessed the operations of

MILLS'
ADJUSTABLE TREADLE

For Sewing Machines, take pleasure in giving our testimony to the great value of the improvement, in a sanitary point of view. The peculiar feature of this new Treadle is that THE FOOT-BOARD IS MADE ADJUSTABLE BOTH VERTICALLY AND LONGITUDINALLY; so that whatever the size or shape of the foot or shoe, THE TRUE CENTRE OF MOTION OF THE FOOT MAY ALWAYS BE BROUGHT TO COINCIDE WITH THE CENTRE OF MOTION OF THE TREADLE, AND HELD THERE, thus permitting the feet to move on their natural centre without having first to overcome the inertia and weight of the heavier limbs.

First—It saves the excessive labor and waste of power consumed in keeping up the rapidly alternating motion of the lower limbs and body, whenever the machine is run with any speed.

Second—It avoids the frequent and serious injury to female health resulting directly from that motion.

By the general adoption of this Treadle we believe the only serious objection to the foot-power sewing machine will be removed, and that so far from being prejudicial to the health of the operator, its use will prove as harmless and positively beneficial as other physical exercise, tending directly to develope the muscles of the calf of the leg, strengthen the ancle, restore the elasticity of the foot, and promote circulation in the extremities."

Signed,

H. H. TOLAND, M. D.,
President Toland Medical College.
G. HOLLAND, M. D.,
H. H. HUSBAND, M. D.,
J. CAMPBELL SHOBB, M. D.,
Late Professors Physiology Toland Medical College.
C. M. BATES, M. D.,
Health Officer,
Constituting the San Francisco Board of Health.
L. J. HENRY, M. D.,
WM. F. HALE, M. D.,
BENJ. D. DEAN, M. D.,
President Medical Society of City and County San Francisco.
WM. H. GARWOOD, M. D.,
DAVID WOOSTER, M. D.,
R. BEVERLY COLE, M. D.,
Professor of Obstetrics, Toland Medical College.
J. P. WHITNEY, M. D.,
Emeritus Professor of Physiology, University of the Pacific.
L. C. LANE, M. D.,
Professor of Surgery, University of the Pacific.
C. T. DEANE, M. D.,
Physician S. F. Female Hospital, and Professor Diseases of Women and Children in Toland Medical College.

"I have carefully examined the New Treadle attached to the Howe Sewing Machine, and consider it a valuable improvement, doing away with most of the motion of the back and pelvis, which is unavoidable in operating the old style treadle, and which has proven so detrimental to health. I cheerfully recommend it to those who work with Sewing Machines, believing it to save them much suffering.

35.14 E. M. MOUSER, M.D."

Home Miscellany.

THE REIGN OF PEACE.

The lambs with wolves shall graze the verdant mead·
The boys in flow'ry bands the tiger lead;
The steer and lion at one crib shall meet,
And harmless serpents lick the pilgrim's feet,
The smiling infant in his hand shall take
The crested basilisk and speckled snake;
Pleased the green lustre of their scales survey, [play.
And with their forky tongues and pointless sting shall
Rise, crown'd with light, imperial Salem rise!
Exalt thy towery head, and lift thy eyes!
See barb'rous nations at thy gates attend,
Walk in thy light, and in thy temple bend;
See thy bright altars throng'd with prostrate kings,
And heap'd with products of Sabean springs!
For thee Idume's spicy forests blow,
And seeds of gold in Ophir's mountains glow.

KNOWLEDGE.

BY ANNA C. BRACKETT.

I know how the grape-vine tendrils feel
When the April sun shines down
All over the tangled, ragged stalks,
And the withered leaves so brown.

I have felt how the sap runs soft and warm
From delicate stem to tip;
How they uncurl soft, and tender, and fair,
At the touch of the sun-god's lip.

Then I know how they feel when the hand of fate
Unloosens their clinging hold,
And they yearningly reach in vain, as they swing
Lone in the wind so cold.

I know how they feel when the sap creeps back
And shrivelled and stiffened they seem,
Till they ask, "Was the sun of our April then
Only a dream in a dream?"

A FEW SIGNS.

Solomon said, many centuries ago, "Even a child is known by his doings, whether his work be pure, and whether it be right."—When I see a boy in haste to spend every cent as soon as he gets it, I think it is a sign that he will be a spendthrift. When I see a child hoarding up his pennies, and unwilling to part with them for any good purpose, I think it is a sign that he will be a miser. When I see a boy or girl always looking out for himself or herself, I think it is a sign that the child will grow up a very selfish person. When I see boys and girls often quarreling, I think it is a sign they will be violent men and hateful women. When I see a little boy willing to take strong drink, I think it is a sign that he will be a drunkard. When I see a boy who never attends to the service of religion I think it is a sign that he will be a profane and profligate man. When I see a child obedient to his parents, I think it is a sign of great future blessings from his heavenly parent.—And though changes sometimes take place in the character, yet as a general, rule these signs do not fail.—*Old Jonathan.*

A GOOD MOTHER'S COUNSEL.

When Andrew Jackson left his home in North Carolina for Tennessee, his mother gave him this advice, as related by himself to W. H. Sparks of Georgia: "Andy," said she, (she always called me Andy) "you are going to a new country, and among rough people: you will have to depend on yourself, and cut your own way through the world; I have nothing to give you but a mother's advice. Never tell a lie, nor take what not your own, nor sue anybody for slander or assault and battery; always settle them cases yourself." I promised, and I have tried to keep that promise. I rode off some two hundred yards to a turn in the path, and looked back. She was still standing at the fence and wiping her eyes. I never saw her after that.

HOW A SCHOOLBOY GOT LOST.

The Boston *Traveller* tells this story: The pet of a family, residing not far from La Grange street, is a boy who has recently passed his fifth year, and having donned his first jacket and trowsers, is attending a primary school. The other afternoon he failed to come at the usual hour, much to the alarm of the household, and after a long search, he was found some time after dark, at the Providence Depot. He was sent to bed without much explanation, though it is possible his treatment was what Solomon would have recommend in such an emergency. The next morning he was down to the breakfast table, evidently none the worse for the lesson, and perhaps the wiser. Taking advantage of a lull in the conversation customary at the morning meal, he turned his grave countenance toward the head of the table and giving free vent to his over-charged mind, he exclaimed, "I'll tell you, mamma, how it happened. After school, I went part of the way home with Mary——, and at the corner of a street where she left me, I kissed her, and she kissed me, and then I found I was lost." There was an explosure around the table, just about that time. It is suspected this is not the first young gentleman who has been lost under similar circumstances.

He who calls in the aid of an equal understanding, doubles his own; and he who profits by a superior understanding, raises his powers to a level with the height of the superior understanding he unites with.

LOVING AND BEING LOVED.

Azamet, the vizier, had been raised by Sultan Mahmoud to the highest office in the empire. As soon as he was established in his position he tried to reform many abuses; but the nobles and imaums plotted against him and ruined him in the estimation of the Emperor and the people, so that he was desposed.

Deprived of his property and deserted by his friends, Azamet withdrew to the wilderness of Khorasan, where he lived in a hut of his own building, and planted a little garden by the side of a brook.

Here he lived a hermit's life for two years, when Usbeck, one of his old friends, and a sage of great repute, found out his dwelling-place. Usbeck's wise counsels had had no small share in ameliorating Azamet's punishment, and as he had not forgotten his banished friend, he went to Khorasan.

The sage met the vizier about a mile from the hut; the two friends recognized each other, and embraced, while Usbeck shed tears; Azamet, on the contrary, smiled calmly, and his eyes beamed with joy. "Thanks be to God, who gives strength to the unfortunate," said Usbeck. "The man who had a fine palace in the plains of Ghilem is content with a hut in the wildest part of Khorasan! O, Azamet, your virtue has followed you into this desert; it consoles you for having lost the roses of Herat, the turquoises of Vishapour, and the silks of Mezendran, but has it consoled you for living alone? We all need companions, if not friends. What hermitage is not a tomb?"

When they drew near Azamet's hut, which he had left in the morning, they heard a young horse neigh, and saw him come galloping to meet them. When he came near the vizier he caressed him and ran home before him.

Usbeck saw two fine heifers come from a pasture near by, and run back and forth near Azamet, as if offering him their milk; they then began to follow him. Soon after two goats, with their kids, ran down from a steep rock, showing by their gambols their delight at seeing their master, and began to frolic around him.

But the signs of joy and love which all these animals showed were as nothing compared to those of two white dogs which were awaiting Azamet at the door. They did not run to meet him, but seemed to show him that they had been faithful servants over the house which their master has placed in their care. As soon, however, as he had entered, they caressed him lovingly fawning upon him, throwing themselves at his feet, and only leaping up to lick his hands. When he gave them the last caress they ran away, for very joy, in a long circuit around the cabin, barking at the top of their voices. They seemed beside themselves with delight, but soon returned, out of breath, and stretched themselves at their master's feet.

Usbeck smiled at this sight. "Well," said the vizier, "you see that I am now, as I have been from childhood, the friend of all created things. I tried to make men happy, but they would not let me. I make these animals happy, and take pleasure in their affection and gratitude. You see that, even though I am buried in the wilderness of Khorasan, I have companions, and my hermitage is not a tomb. I still live, for I love and I am beloved."

ADVICE TO YOUNG MEN.

One of the most fatal mistakes—and a common one—leading to many beside itself, which I have often heard with amazement, is conveyed in the almost proverbial phrase: "The world owes me a living." The world owes no such thing. It is no debtor to you, but you are debtor to it, and you cannot work too hard to discharge your obligation. It not only does not owe you anything, but it is not going to pay you anything except as you earn it. And just so fast as you do that, it will pay—not wealth necessarily, not what you may call success or repute, but the honest return of wages, which God stands by to throw in his benediction to make up any deficiency. We are none of us going to thrive except by work—not by waiting for this, or that, not by looking to this and the other man, not by expecting to be lifted, or boosted into success. There are Micawbers all the world over—men waiting for the world to get ready to pay the obligation they suppose it to be under, men as miserably useless as they are contemptible. The fact is, this is a very busy world—a bit selfish if you will—and too thoroughly absorbed in various and varying interest to think much about individual men, young or old. Any of us is of mighty little consequence, and if you would like a healthy snub to your estimate of yourself, shut yourself up for a week and see how superbly indifferent the world is as to your absence, and with what marvelous felicity it accommodates itself to your loss. The fly upon the coach-wheel in the fable is not more insignificant. The only thing that gives significance to you is your work, your industry and fidelity.

THE AIR WE BREATHE.

At the June meeting of the Royal Irish Academy, Dr. Sigerson read a rather startling paper on the atmosphere, illustrating at once the delicacy of chemical research and the harmful mixtures which are sometimes breathed by mechanics and others. In the air of iron works he discovered hollow balls of iron about one ten thousandth of an inch in diameter; in a shirt factory air there are little filaments of linen and cotton, with minute eggs; threshing machines and mills fill the air with fibres, starch-grains, and spores; in printing offices, antimony from the types is breathed and in stables and in the barber shops, scales and hairs; tobacco smokers breathe globules of nicotine; and in short, every workshop fills the atmosphere with floating fragments of the materials used.

One individual's selfishness doubles that of others, and this again redoubles that; and so layer upon layer of ice is frozen.

DIFFERENT WAYS OF MAKING TEA.

The Chinaman puts his tea in a cup, pours hot water upon it, and drinks the infusion off the leaves; he never dreams of spoiling the flavor with sugar or cream. The Japanese triturate the leaves before putting them in a pot. In Morocco they put green tea, a little tansy and a great deal of sugar in a teapot, and fill it up with boiling water. In Bokhara every man carries a small bag of tea about him, a certain quantity of which he hands over to the booth-keeper he patronizes, who concocts the beverage for him. The Bokhariot finds it as difficulty to pass a tea-booth as our own dram-drinker does to go by a gin-palace. His breakfast beverage is Schitschi, that is, tea, flavored with milk, cream, or mutton fat in which bread is soaked. During the daytime, sugarless green tea is drank with the accompaniment of cakes of flour and mutton-suet. It is considered an inexcusable breach of manners to cool the hot cup of tea with the breath; but the difficulty is overcome by supporting the right elbow in the left hand and giving a circular movement to the cup. How long each cup of tea takes to draw is calculated to the second; and when the can is emptied, it is passed round among the company for each tea-drinker to take up as many leaves as can be held between the thumb and finger—the leaves being esteemed a special dainty.

When Mr. Bell was traveling in Asiatic Russia he had to claim the hospitality of the Buratsky Arabs. The mistress of the tent, placing a large kettle on the fire, wiped it carefully with a horse's tail, filled it with water, and threw in some coarse tea and a little salt. When this was near boiling point, she tossed the tea about with a b rass ladle until the liquid became quite brown, and then it was poured off into another vessel. Cleansing the kettle as before, the woman again set it on the fire in order to fry a paste of meal and fresh butter. Upon this the tea and some fresh cream were poured, the ladle put into requisition and, after a time, the whole taken off the fire and set aside to cool. Half-pint wooden mugs were handed round, and the tea ladled into them, a tea forming meat and drink, and satisfying both hunger and thirst. However made, tea is a blessed invention for the weary traveler.—*Chamber's Journal.*

[We think the only way to make tea, so enjoy the full aroma of this delightful beverage (for we confess we love good tea) is a way we learned in Europe from one who had been made familiar with the best devices of lovers of tea, is as follows:

The Tea Pot to be used should always be the *Brown Tea Pot.* Pour into this tea pot water at boiling heat, let it stand long enough to heat the pot, throw this cooled water out and fill again with *boiling water*, then drop in the tea upon the water lightly, neither shaking nor stirring the water, close the lid and stop up the nose of the pot and let it stand five minutes upon the table, it is then perfect, the *tea* will then be extract of the leaves with all the aroma, and *totally differing* from tea made by *pouring the water on the tea leaves*, such a process drowns the aroma of the leaves and simply makes an *herb drink.*

If any person will try both ways with the same tea, they will be much astonished at the difference, the first plan gives a high flavored beautiful tea, the latter, a drink sometimes undrinkable. Let all try our plan with the same tea and note the difference.—Ed. F.]

REMARKABLE RESCUE.

In the year 1628, Landamman Kasper, of Brandsberg, the newly chosen Governor of Bellenz, was riding over the St. Gothard from Zug, accompanied by his servant and a faithful dog. At the top of the pass he and his servant were buried by an avalanche, which descended from the Lucendra. The dog alone shook himself free. His first care was to extricate his master. But when he saw he could not succeed in doing this, he hastened back to the hospice, and there, by pitiful howling and winning, announced that an accident had happened. The landlord and his servants set out immediately with shovels and pickaxes, and followed the dog, which ran quickly before them. They soon reached the place where the avalance had fallen. Here the faithful dog stopped suddenly, plunged his face into the snow, and began to scratch it up, barking and winning. The men set to work at once, and after a difficult labor succeeded in extricating the Landamman, and soon after his servant. They were both alive, after spending thirty-six fearful hours beneath the snow, oppressed by the most painful thoughts. They had heard the howling and barking of the dog quite plainly, and had noticed his sudden departure, and the arrival of their delivers; they had heard them talking and working, without being able to move or utter a sound. The Landamman's will ordained that an image of the faithful dog should be sculptured at his feet on his tomb. This monument was seen till lately in St Oswald's Church at Zug.

A LITTLE HERO.

A gentlemen, while passing through a street in New York, heard a child's voice in a basement crying "Help! help!" He ran in, and found a little five-year-old holding a bed blanket around his sister, two years younger, who had caught her clothes on fire, and the little hero had succeeded in putting out the flames. The boy, in answer to the question why he wrapped the bed blanket around his sister's burning clothes, said me had told him that was the best way to put out fire, and why he cried "Help! help!" that he was afraid he could not do it, and wanted some one to help. He was then asked why he did not leave his sister and run into the street, and cry for help. He answered with tears in his eyes "No" I never would have left her. She is my sister. Had she been burned up, I would have burned too."

When we hear that a friend has detected some fault in us, we are always disposed to do him the same favor, but is it *right* or *noble* to do so?

SOMETHING NEW.
$1,000 TO $3,000 PER ANNUM
EVERYBODY AN ARTIST.

WITH my new English Art of Painting and Drawing Oil Paintings, Landscapes, Portraits, and all kinds of Scenery, any person without previous experience can paint a life-like picture of himself or herself, or of any relative, friend, General, Statesman, or Scenery, in two hours time. The chemicals and everything necessary to paint 20 or 30 pictures can be secured at any good drug store, exclusive of apparatus for drawing, for $2.50 to $3.00, or I will forward the outfit ready for work for $3.00. For permanent, profitable employment this is the best business ever offered to the public. You can teach it at your own homes, in towns school districts etc., and make money rapidly and honorably. A class of 50 scholars at $5 per scholar, can be taught in from two to four hours. At Spencer, Ind., I made $16 in one hour to aching this new art. At Shelbyville, Ind., $45 in four days, and at Greensburg, Ind., from $5 to 15 each evening through the entire week. At Alliance, O., I received $400 for four weeks' work, and wherever it has been introduced it has proved a perfect success. As parlor ornaments these pictures are unexcelled for beauty and durability. I am permanently engaged as a teacher in the V. M. & F. College, located at Valparaiso, Ind., so that none need hesitate to send for this art. Satisfaction given or the money will be returned. For full and complete instruction both for painting and apparatus for drawing pictures, remit $1 to

FARMER OFFICE.

GRAY'S MUSIC STORE,
Musical Merchandize of every Description.
THE RECENTLY INTRODUCED

BURDETT ORGAN.

The manufacturers of the BURDETT ORGANS have succeeded in producing an instrument which may in a manner be compared to an orchestra, containing a variety of tones richly voiced. The stops in this make not only add to the power of the organ, but give a perfect imitation of different instruments, so that a simple melody may be repeated a number of times and the interest of the listener will be increased. It is with pleasure we acknowledge the flattering testimonials we have received from leading organists in California among whom may be named

Mr. GEO. T. ANS, Organist of the Church of the Advent, Howard Street, S. F.
Mr. SAML D. MAYER, Organist of St. John's Church, Oakland.
Mr. H. M. BOSWORTH, Organist of Calvary Church, S. F.
Mr. J. W. C. RHIND, Organist of Howard St. M. E. Church, S. F.
Mr. B. J. McCABE, Organist of St. Francis Church, S. F.
Mr. J. H. DOHRMANN, Organist of St. Patrick's Church, S. F.
Mr. CHAS. H. HOFFMAN, Organist of the Mason Street Synagogue.
Mr. J. MULLER, Organist of St. Ignatius' Church, S. F.
Mr. GEO. SCHUCKE, Organist of the Methodist Church, San Jose.
Mr. EVERETT POMEROY, Organist of the Presbyterian Church, San Jose.
Mr. F. WM. GABRIEL, Organist of Trinity Church, San Jose.
Mr. J. W. HANDLEY, Professor of Music, St. Augustine's College, Benicia.
Mr. LOUIS HECKMANN, Organist of the Unitarian Church, Geary Street, S. F.
Mr. JAS. R. LAWRIE, Professor of Music, Santa Clara.
Mr. DAVID H. BERLIN, Teacher of Music, Stockton.
Mr. WM. CARMICHAEL, Organist of St. Mary's Church, Stockton.

Our prices range from $125.00 to $400.00 in U. S. Currency, our arrangements being such that we supply our wholesale and retail customers in San Francisco without advance for freight from the factory at Chicago. The makers are paid in the end by selling a first class organ at a fair price, than an unreliable one at an astonishingly low price. We will sell organs, melodeons and pianos on time payments to responsible buyers.

Miscellany

BE INSURED

BY CHARLES DICKENS.

Two hundred and twenty joint stock companies in London say, as with one voice,—Be insured. It matters not what may be the object of your solicitude, pronounced. Whether you are thinking of safety of your life by land, or by railway, or by sea, or of the unbroken condition of your arms and legs, or the maintainance of general health, or of comfort and competence in your old age, or of the interest of wife or children when you may be no more, or of provision for your boy when he reaches the apprenticing age, or of the happy marriage and the wedding portion of your little Mary Annie, one day to be, you hope, a blushing bride, hovering tiny plaything fairy of two or three years; or the honesty of your clerk, or of the safety of rent due from your tenant, or of the security of money due from your debtors, or of the security of your house and property from fire, or of the immunity of your plate-glass windows from smash, or of the preservation from loss of your farming stock from the effect of a hail-storm—never mind the subject matter; be insured.

The subject of insurance is far more curious than is generally supposed. One man insures because his neighbor has done so, and has reaped obvious benefit by so doing; but he seldom thinks why two or three hundred companies should take the trouble to look after his interests in this way. It is worth while to know more about this than is generally known, for insurance is one of the very best modes of bringing about, in a healthy way, the maxim, "SHARE AND SHARE ALIKE."

That maxim really contains the pith of the whole science. Out of every two hundred houses one will burn each year; but, as no one can tell which the doomed house is, all contribute to an insurance company the necessary amount to pay the loss, and the expenses of carrying on the business, general average fashion, "sharing and sharing alike."

A disastrous fire may destroy your house and furniture in a few hours; but this need not impoverish you. There are companies which come to your aid, if you have had forethought enough to insure before the calamity. As to the question, What is the proper rate of the premium? this depends on averages, as in the former instances. Fires, even, observe a certain general law of frequency in great cities, which affords a guidance to the companies. Sometimes there is an exception, as in the autumn of 1864, when three great fires occurred at Newcastle, Manchester and Liverpool, nearly at one time; but the companies will look out for a compensation in a comparative paucity of great fires at some other time and, perhaps, in a large number of persons who will be led to consider the benefits of insurance companies against fire. Who can doubt the immense value of fire-insurance? Who does not see how strikingly it diffuses calamity among a whole body of policeholders, so that each one may bear a portion which is quite insignificant in amount? Instead of one family being beggared at a single blow, ten thousand families bear a loss of a few shillings each.

Thus it is, then. If you lose your life your fellow-men provide something for those who may be left to mourn you. If you meet with an accident they will support you while on your sick bed. If your house be burnt, or your ship sunk, they will share the loss with you. If your debtor or your lodger run away and forget to pay you, they will bear part of your burden. If you are insolvent, they will pay your debts. If you are wanting in honesty to your employer, they will bear the loss as sureties. That is, they will do so to them. And if all join in this mutual arrangement, the effects will be two—loss and suffering will not fall so heavily on any one person; and every member of the community will be directly benefited by the honesty and carefulness of all others.

THE NUMBER SEVEN.

This number is frequently used in the Bible. On the 7th day God ended his work, the 7th month Noah's ark touched the ground, and in 7 days a dove was out.

Abraham pleaded 7 times for Solomon, Jacob served 7 years for Rachel, mourned 7 days for Joseph, and was pursued a 7 days journey by Laban.

A plenty of 7 years and a famine of 7 years were told in Pharaoh's dream, by 7 fat and 7 lean beasts, and 7 ears of full and 7 ears of blasted corn.

On the 7th day of the 7th month the children of Israel fasted 7 days, and remained 7 days in tents. Every 7 years the land rested; every 7th year all bondmen were free, and the law was read to the people.

In the destruction of Jericho, 7 priests bore 7 trumpets 7 days; on the 7th day they surrounded the walls 7 times, and at the end of the 7th round the walls fell.

Solomon was 7 years building the temple, and feasted 7 days at its dedication.

In the tabernacle were 7 lamps, and the golden candlestick had 7 branches. Naaman washed 7 times in Jordan.

Job's friends sat with him 7 days and 7 nights, and offered 7 bullocks and 7 rams as an atonement.

In the Revelations we read of 7 churches, 7 candlesticks, 7 stars, 7 trumpets, 7 plagues, 7 thunders, 7 veils, 7 angels, and a 7 headed monster.

Slip Knots.—Divorces.

A Pitched Battle.—A fight between two Tars.

To Keep Dry.—Live on Oat Flan.

A Poor Man's Story.—The Garret.

How was Jonah Punished?—Whaled.

A Doctor's Sign and Motto.—Patience and long suffering.

THE PROBLEM OF THE AGE.

Under this heading we observe in the papers an advertisement announcing the offer of a prize of twenty guineas by the editor of the "Gardener's Magazine" for the best essay on irrigation as applied both to the farm and the garden, and with reference both to the storage of rainfall and the utilization of sewage. We gladly give publicity to the offer, hoping thereby to augment and sustain the interest which we trust will be evoked by the judicious and spirited conduct of our able horticultural contemporary. It is time, indeed, that the engineer stood at the elbow of the farmer and occasionally gave the gardener also the benefit of practical advice. Ever since the days of drainage dawned we have been drifting into ruinous habits in respect to the employment of water in the cultivation of the land, and in seasons of drought like those of 1868 and 1870 we have had to behold burnt-up fields and comparatively gardens which might have been luxurious and profitable beyond compare had but precautions been taken to store for use when wanted the surplus rainfall of the Winters immediately preceding. The condition of pastures and garden lawns throughout the whole of the past season has been a reproach to agriculture and horticulture alike, proving that the practitioners of these arts have hitherto neglected to take the engineer into council with them. We can but echo the words of the editor of the "Gardener's Magazine," when he says:—"The needs of the farm are repeated in the garden. The case of the river is reproduced in the brook. Almost every garden in the land would have been the better for more water than it has obtained during the past three months. It is a question if the water-pot and the ordinary garden engine do not represent an enormous waste of labor for very poor results. It is possible, too, that a system of irrigation might be devised for gardens which would enhance their beauty and productiveness a thousand times. Might we not, for example, send nourishing streams through numerous channels amongst peas, beans, cauliflowers, cabbages, and potatoes, which we now leave to battle with drought, or actually injure by dribbling drains of water amongst them by means of paltry watering-pots. In almost every garden there is a lack of water in a dry season, or if no lack of water, lack of skill in employing it, else why should we see the grass-plots burnt up by Midsummer-day, and thenceforward rendered hideous by drought until the end of September? Yet in how many of the burnt-up gardens are there streams and springs that never fail, ditches that are noisome as they flow, but stores of wealth and health for such as will divert their blackened waters to the land? It is time the gardener was instructed in the simplest modes of raising water from wells and of preparing the water for use by exposure to sunshine, and of applying it at last with a view to the economising of every precious drop, not only in the lifting and distributing, but also in the final result, so that every drop shall perform its due share in the production of root, leaf, flower and fruit."—*Mechanics' Magazine.*

MILK-ROOMS

Mr. A. O. Bagly, of Derby, Vt., asks for a plan of a good milk-room. He describes a room built by his father many years ago, which for some unknown reason is useless. It is 15x20 feet, 3 feet below the ground, and 6 feet above it; the foundation-wall and floor being of stone. It is ventilated by a door at one end and a window at the other. The thermometer stands, during hot weather, at about 60° in the lowest part, and 65° in the highest. Still he does not get more than two-thirds of the cream that he does in another room where thermometer stands at 80° at the same time and the cream is of no better quality.—Unless his thermometer is incorrect, we are at a loss to account for the difficulty. Common thermometers are often faulty; and, if his marks two or three degrees too high, then his cellar milk-room is too cool, for 60° is the lowest that should be allowed under any circumstances, and unless the ventilation is very free, 65° would be better. We would suggest the experiment of putting another window in the side of the room that is most exposed to prevailing summer winds, so as to secure as free an admission of warm air as may prove to be necessary to secure the best product of cream. We know several milk-rooms, built on the plan of this one, that are entirely satisfactory; and in all successful milk-rooms, arrangements are made to keep the temperature down to 60°, or lower. About Philadelphia, where the best butter is made, they sometimes use spring-houses, built of stone, in the side of a bank, setting the milk-pans in water of even less than 60° temperature. Others have dry milk-cellars, the whole of which, except room for ventilation at the eave is below the surface of the ground. In these rooms cream rises much more slowly than in a warmer temperature; and it is possible that our Vermont friend would have more cream if he gave it a longer time to rise.—*American Agriculturist.*

PRICE OF WHEAT IN CONNECTICUT EIGHTY YEARS AGO.

Mr. L. M. Lane, in looking over some old papers, came across a table his grandfather had prepared, showing the price of wheat per bushel at different times, from 1790 to 1818, and he has forwarded it to the *Agriculturist*. From February 12, 1790, to April 12, 1791, the price was 5s. 3d. The next year it was 4s. 6d., and the next, 4s. From February 11, 1792, to January 12, 1795, it was 4s. 6d, and during the next two years it was 6s., showing that prices fluctuated then as much as they do now. In 1798, it was down to 6s., and in two years, up to 8s. again, and the next year, 10s. 2d. In 1803, it was down to 6s. 6d., and in 1805, 11s. 6d., in 1808, 7s. 6d., and in 1810, reached 12s. In 1813, it reached 13s. 6d., which is the highest figure reached during the twenty-six years. In 1816 it was 10s. 6d., and in 1818, 13s. The prices are taken from Mr. Lane's own books, and the table is prepared with great neatness, and doubtless with much care.

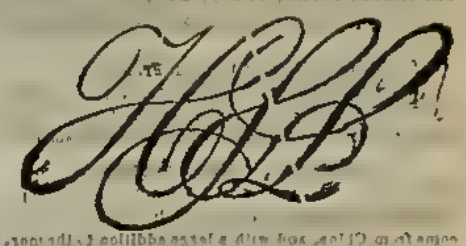
Miscellaneous.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE



This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attack axles, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum;

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

WHO MAKES SCRAP BOOKS

'Tis said "In the making of Books there is no End," and we know there are many persons who are always interested in making SCRAP BOOKS, now to all such persons, we have some very important information which will benefit them.

It will be seen by our advertisement of OLD NEWSPAPERS FOR SALE that we can furnish just the *right material for Scrap Books*, for we have in this collection of Old Newspapers, a series of papers of 10 to 18 years and from every State in the Union, and also European papers, also select scientific and literary papers, Journals of all kinds. In these papers will be found much of the best Poetry of the age, also Stories, Anecdotes, Relicts &c., all very valuable, and these we shall offer at the low rate of $2.50 to $3, per hundred. Many of these are 12, 16 and 20 page pamphlets and magazines and other periodicals; those who want these collections will address

EDITOR CAL. FARMER.

To Farmers & Gardeners.

If the Garden Seeds you use have proved fresh and true to name, stick to the man who sells them to you; he is worth encouraging. If you have not found them fresh and true, I shall be happy to add your name to those of the fifty thousand farmers and market gardeners scattered throughout the United States and Canadas, whom I annually supply with my *warranted* garden seeds. I raise over one hundred varieties of vegetable seed on my three farms and every practical farmer and gardener knows, it is for the interest of all who plant to get their seed *directly from the grower*. I invite attention to my Cabbage, Onion and Squash seed. My large vegetable and flower seed Catalogue, abounding with engravings sent *free* to all.

Retail Prices in the Fruit Market.

BULLETTI & SELNA.

The Fruit market is now being fully supplied with Strawberries which are coming in very abundant.

We notice at the Santa Clara Depot this day Fifty Large Chests, *Two and a Half* Tons Strawberries from his one Depot, with other products in proportion; this shows the immense quantities grown. *Strawberries* will now be the principal fruit for a while, and their abundance will bring prices to low figures. The quantity grown this year will be immense.

Oranges, Bananas, and other tropical fruits are now increasing on the market, by which a fine Desert can be spread.

Dairy—Butter, Cheese, Eggs etc.

M. B. French & Co.

The Dairy market shows an advance on Butter, and a smaller supply by reason of the continued dry of dry weather and lost crops, and also the packing down of Butter which has commenced in good earnest—this makes the price firmer, gives an advance, and will cause large importations over the Railroad.

Eggs remain the same at retail, yet their great plenty would indicate a decline in price. Oregon send us a large supply which sold at 20@22 and this affects our market. We anticipate a new Importation of Eggs over the Railroad.

REDUCTION IN PRICE

AND

Liberal Club List

With a desire to place the CALIFORNIA FARMER in every family on this Coast we have concluded to make a

Liberal Reduction in Price,

and to place it at such a sum as that every Cultivator of the soil could have it.

We have announced the Terms in another column, and here we give additional inducements to our patrons and friends to not only subscribe for the FARMER, but to secure other valuable Publications at a moderate price also.

We make this announcement for the express purpose of meeting the wants of a large increasing Agricultural population, and a large emigration that will soon be coming to our shores, who need the information of our resources, and we feel we can serve our State in no better way than to give to these new comers the

CALIFORNIA FARMER

at a very reasonable sum, so that every family can have a copy.

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar,	$13,50.
The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid	$7,50,
The CALIFORNIA FARMER and the New York Weekly Tribune,	$5,50.
The CALIFORNIA FARMER and the American Agriculturist,	$5,00
The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life,"	$3,00
The CALIFORNIA FARMER and the Phrenological Journal of New York now in its 50th Volume,	$6,00.
The CALIFORNIA FARMER and the American Stock Journal,	$5,00.
The CALIFORNIA FARMER and the Overland Monthly,	$7,00.
The CALIFORNIA FARMER, and the Atlantic Monthly,	$7,00.

AGRICULTURE AND THE MECHANIC ARTS.

[We present in the brief but excellent remarks of Mr. Brooks in the part of the address we here publish, a *picture of truth*, and hope every Farmer will read, and ask himself which of these Homes thus described is mine.—ED F.]

The Hon. H. T. Brooks delivered an address at the Erie (N. Y.) County Fair in 1868.

We give extracts therefrom, many paragraphs of which should be taken as texts for instructive discourses. The aphorism that, human character has always been fashioned by human food, is one that we propose dilating upon at an early day:

He announces that "agriculture and the mechanic arts are the essential elements of civilization. What men are and what they become depend mainly upon their mode of getting a living. In all countries and in all climates human character has been fashioned by human food. Just so far as nations have resorted to systematic agriculture, so far have they progressed in other departments of human life. It could not be otherwise—breakfast is the first thing in the morning. So long as that is uncertain, other things stand still. The sciences, the grace and even the virtues have little to do with a hungry man. Uncertain and irregular supplies of daily food will hold any people in darkness and demoralization. The forging of the plow from stick to steel has marked the real progress of nations. Education and revenue spring from deep-stirred soil. You may safely judge any people by their agriculture. Elegant mansions have grown from good fertilizers. If you see their crops you can guess at their homes, barns, carriages, schools, churches, moral standing and even the style of their hats and the width of their skirts. When buildings take the imposing shapes and all the furnishings and surroundings indicate comparative wealth and social culture, you may be sure there is good grain or grass land there, and it has been well tilled. Where you see men illiterate, awkward and shabbily dressed and living in shabby houses, you may know they have a lean soil that barley feeds them, furnishing no surplus for luxuries, and accomplishments."

After many sensible remarks upon the subject of education, which Mr. Brooks defines to be the "acquisition of useful knowledge," with discipline and development, he contends that the real educators of the people are agriculture and the mechanic arts.—These last have produced the wonderful results which have marked the progress of the last few years.

WOOL TRADE OF THE BRITISH COLONIES

The total quantity of wool exported from the principal British possessions in 1867 amounted to 242,756,711 pounds and 86,913 bales. A total of 186,678,993 pounds came from Australia—that is, 96,548,442 pounds from New South Wales; 68,010,691 pounds from Victoria; 29,269,226 pounds from South Australia; 6,136,428 pounds from Tasmania; 28,875,168 pounds from New Zealand, and 18,906,778 pounds from Queensland. India furnished 12,264,907 pounds; Natal, 2,717,384 pounds; the Cape of Good Hope 36,486,760 pounds; and North America, 1,605,610 pounds.

Moveable or adjustable horse-shoes have become a fixed fact, a company in Chicopee, Mass., are engaged in their manufacture. This shoe can be taken off at night, or when the horse is not at work, and put on again when wanted, as easily as a pair of boots.

YUCAS AS ORNAMENTAL PLANTS IN THE GARDEN AND LAWN.

This class of Ornamental plants is, as yet, a great novelty in all our gardens. We doubt if over one in a thousand who keep flower gardens, have yet seen or thought of growing one of these charming, yet exquisite flowering plants. The *Yucca filamentosa* is one of the best for general use. Fuller describes it as follows.

"Leaves, evergreen, long and rather stiff, spreading occasionally; slightly recurved. Flowers usually pure white, but in some specimens are slightly tinged with greenish yellow. They also vary in size, from one to two inches long, and are nearly as broad. Flower stem four or eight feet high, branching, carrying several hundred blooms, each of which is succeeded by a large, six celled pod, filled with smooth, flat, dark colored seeds. After the plant blooms, the centre of the crown dies, numerous suckers spring up from below, and these will bloom as soon as they are large and strong enough, which is usually in two or three years; but if taken off and planted separately, they will bloom the second season. The seeds grow very readily if planted in autum or early in spring, and transplanted at the end of the first season. Seedlings usually bloom when three years old.

"Although this species is a native of the Southern States, it is quite hardy, even in the Northern border States; and we have known it to stand a temperature of 24° below zero, uninjured.

EVERGREENS IN ORCHARDS.

Of the advantages accruing to the orchardist who mingles evergreen trees occasionally with his pears, apples, etc., I have before written, and it is, I rejoice to know, gradually becoming an acknowledged item toward success. The ameliorating influence of the evergreen extends, really, but about fifty feet; yet within that distance the bodily action of man feels it perceptably, and so, reasoning with careful observation of animal and vegetable life, each year tells us more and more that to insure success and perfect development of either, certain warmth and shelter, etc., must be had. In the animal, it is by means of artificial shelter and clothing in which they can be placed; but in the vegetable it must be by the subduing action of one plant upon another, and the evergreen from long experience, is proved the safe guard, ameliorating nurse of the deciduous tree.

It has been during the past year asserted that evergreens soon grow so large as to displace other trees. Let me say that if they are pruned each year from the time they are three feet high, by cutting out in spring time the heading shoot of each branch, there will be no trouble in growing the White Pine, Norway Spruce, etc., in and among pears or other trees at distances of twelve feet each; but should it ever occur that the evergreen overspread its bounds, it will bear the shears, and not object to having its head sheared from bottom to top, so that it shall resemble a cone of six feet at base and fifty feet high, provided the cutting be done in April or May.—F R. ELLIOTT in *N Y. Horticulturalists*.

WHITEWASHING TREES.

Don't whitewash the bark upon the bodies of fruit and ornamental trees. We are at a loss to know for what purpose some persons thus coat the bark of fruit and shade trees about their premises with lime, unless it is to make them look nice. It certainly does them more harm than good as it serves to obstruct the respiratory organs, and in a measure prevents a thrifty growth. Should the bark become diseased and rough, or covered with moss, scrape it thoroughly with a hoe or scraper of some suitable description; after which wash thoroughly with a strong solution of soap and water. If this is done properly every season, it will prove a great benefit by destroying the insects which prey upon the bark, and otherwise promoting a healthy condition thereof, and increasing the vigor and vitality of the tree.—*Farm Journal*.

THE GREAT MEDICAL CONVENTION.

Our city is now the "Headquarters" of Medical Science, Medical men, Medical discussion, and new advances in the "Way to Live," will result we hope in great good to our State. It is certainly most gratifying to know that such are the facilities, of travelling that we can now call a Convention in California from all parts of our Union, and in a brief time meet here in the metropolis of the Pacific.

The Medical Convention now held in San Francisco is very largely attended from every section of the country.

At a County Fair in Indiana, last fall, a gentleman took the premium on the best acre of potatoes, on a one hundred and sixty-five bushel crop.

A farmer who runs his farm without a record of expenses and the cost of different crops, is like a ship without a compass or a log book.

Home Correspondence.

TALL BARLEY.

SAN FRANCISCO, May 2d, 1871.

COL. WARREN, SIR:

Learning from my friend and neighbor, Wm. O. Donnel, San Jose, that you are an advocate of Summer Fallowing and Deep Plowing, I brought you up a sample of Barley treated in that way, there is 80 acres of it, it is situated near the Twelve Mile House, Gilroy Road, Santa Clara County, close by the Coyote Station on the S. R. R. R., the Rancho is owned by my brother, Andrew Stark.

JOHN STARK.

[The Letter of our correspondent was duly received, and, so that a large number of our people could see this Barley we left it at the Merchants' Exchange. It is a fine sample of Barley about 4½ feet high, strong stalk, heading out boldly, and showing that "Summer Fallow" and Deep Plowing is the true way. Our Correspondent may be sure that the harvest of his Brother will be a good one and the yield a large one. We return him thanks for his courtesy and attention.—ED. F.]

DEEP TILLAGE AT ANAHEIM.

We give the following Letter from Wm. R. Olden, Esq., to the Anaheim *Gazette*, describing samples of Grain sent to Mr. Northam of this city, from Anaheim. Mr. Northam is well known as interested largely in lands in that vicinity, and Mr. Olden is an earnest and true advocate of *Deep Tillage* and good and wise cultivation, and generally opposed to all *irrigation*.

We are courteously invited to call and see these samples, which we found faithfully *illustrated deep* and *shallow plowing*, good and bad cultivation.

We take pleasure in giving the Letter of Mr. Olden, and his discription of the Grain thus grown. This grain as also the Barley mentioned above sent to us, can all be seen at the Merchants' Exchange. We hope our Farmers will examine these proofs.—ED. F.]

ANAHEIM, April 27th, 1871.

EDWARD F. NORTHAM, ESQ., San Francisco—Dear Sir: Herewith I send you, per Wells, Fargo & Co.'s Express, specimens of rye grown upon my land near Anaheim, just four months from the seed. The result has completely vindicated the good effects of deep and thorough culture, and has furnished the most convincing proof that by cultivation alone, a good crops can be raised upon nine-tenths of the land composing the plain surrounding the town of Anaheim, and which is covered by the "Stearns' Ranchos." This and the past season has furnished a most favorable opportunity to test the value of this system of culture. With the same deficiency of rain, any other part of this State would have been a desert; but here, all deep-rooted plants have grown with their usual luxuriance, as moisture is abundant at a moderate depth below the surface; It was the knowledge of this fact that made me confidently pursue my system of culture, the results of which are as certain as those of a mathematical problem.

All that is required is to pulverise the crust that overlays this moist subsoil, and the upward flow of moisture is steady and abundant. In proof of this, my grain came up promptly and has grown steadily, and has apparently been entirely unaffected by the very unfavorable weather of the past Winter and Spring. Three times it has been prostrated by the furious gales that devastated the whole State, but in two days it was erect and growing as vigorously as ever. Neither sun nor wind can dry out my subsoiled land any more than they can my well; both are supplied from an unfailing source.

The specimens that, I send to you will fully illustrate the effects of good culture. The best is from ground plowed and subsoiled two feet deep; the next best, from 12 inch plowing; the third, 6-inch plowing; and the worst, from 3-inch scarifying, according to the most approved method of our *agriculturalchural* community. As these specimens are taken from contiguous spots, and from precisely the same kind of soil, it is sufficiently evident that the failure of the crop is not owing either to the soil or climate, but simply to the insufficiency of cultivation.

I can force the soil of this valley to yield a crop without one drop of rain, and without irrigation. My crop is the best I have seen in this county, irrigated or otherwise, and the best of it as good as I have seen in the best of seasons. With a steam plough I could have had a crop of 500 acres, equal to my best, which I think will yield 40 sacks per acre. When the grain has ripened, I will send you a specimen, if you desire it.

Yours truly, WM. R. OLDEN.

"I think the specimen of barley from 12 inch plowed land will be hard to beat, either for the vigor of its growth or the size of its heads. I think the rye from the 12-inch ground will yield quite as much grain as the subsoiled—the heads are as large and numerous, and the straw is shorter, which is no disadvantage."

The following is a list, referred to above, of specimens of rye and barley from Wm. R. Olden, of Stearn's ranches, Anaheim, Los Angeles Country, four months from seed, not irrigated:

Rye on land scratched 3 inches deep, 2½ feet high.

Rye on land plowed 6 inches deep, 3 feet high.

Rye on land plowed 12 inches deep, full head and heavy, 5 feet high.

Rye on land plowed and subsoiled 2 feet deep, full head and heavy, 6½ feet high.

Barley on land plowed 12 inches deep, full head and heavy, 3 feet high.

CARE OF SUCKING COLTS.

Those who raise colts, usually exercise care in the selection of good stock to breed from, but many great neglect to give the colts proper attention during hot weather, while they are running with dams. It is not uncommon to see those that were healthy and well developed in early summer looking puny and poor and their hair falling off before autumn. This trouble arises from allowing the colt to draw milk while the blood of the mare is in a high state of heat from violent exertion.

When the dam is used in hot weather upon the farm or road, so as to heat her blood, the colt should never be allowed to suck until she has fully cooled off. Let him fill himself before the mother is put into the harness, and if it is important that he should accompany the dam, tie him at her side so that he will be unable to draw milk until he is liberated; for it is much better that he should go hungry a few hours than to take his food while it is in a fevered state.

If the mare is to make a long distance in a hot day, and return at night, it is best to leave the colt at home, and draw the milk from the udder by hand once or twice during the day, and upon returning then allow the colt to fill himself gradually as the milk is secreted.

Colts injured by heated milk seldom recover from it, for a year or two, and many times never. They become reduced in flesh, get lousy in the fall, and during the first winter of their existence when they need health and strength, as under any circumstances it is the most critical period of their growth, they have life just enough to move, and the second summer, the proper time for development, is spent in the recuperation of lost vitality.—*Horseman's Manual*.

PAPER-HANGINGS AS A MEANS OF DECORATION.

In discoursing on this subject to the Edinburgh Architectural Society, Mr. Thomas Hall gave the following practical suggestions:—As to be selection of patterns for bed-rooms, the paper should be cheerful, with a light ground, tinted to suit the aspect of the room; the design to be cheerful, either a chintz pattern, or a conventional flower, or a plain wall of a watered or diapered pattern, surrounded on each wall with a nice floral ornamental border. For drawing-rooms, the paper should also be light, and just suggestive of richness, without giving the impression of extravagance, either in gold or color. Gilding is one of the most dangerous as well as one of the most seductive elements at a paper-stainer's disposal. Too much glitter is to be avoided, and happy is the man who can hit the proper medium, as he who errs by running to the opposite extreme disgusts by the contempt thrown upon the ordinary usages of modern society. For dining-rooms, the only papers that ought to be used are oil-painted flocks, which can be treated to suit any aspect, or any description of furniture. For libraries or offices the color of the paper should be rich, but quiet in tone, with a quiet, unobtrusive pattern, either in a deeper shade of same color, or a geometric pattern, with a little gilding. Paper-hangings (at least those with a printed pattern) should never be used on ceilings.—*British Trade Journal*.

MORE FINE POULTRY.

A very excellent show of fine poultry was made this week by C. M. Nichols, Pioneer Poultry raiser from Fruit Vale, at the store, corner of Merchant and Sansome street.

The usual fine kinds were light and dark Brahmas, Houdans, Cochins and Bantams. The collection of Mr. Nichols was a very fine one.

BEET-ROOT SUGAR IN CALIFORNIA.

[We received the following Letter from Rhode Island, and as it contains interesting facts we give them for general benefit, and reply as far as facts can be gathered.—ED. F.]

EDITOR CALIFORNIA FARMER:

DEAR SIR.—I am preparing a Report on Beet-root Sugar for the Agricultural Transactions of this State, and especially desire to get full information of all successful operations in this country. I rejoice to hear that you are succeeding so well. The producers of Beet Sugar in this country need to make common cause. I know of none on this side of the country nearer than New Jersey, but it is highly possible that we shall go on in New England without an attempt at least to make our own sugar. I have the figures from the Treasury Department of the amount and value of sugar imported for home consumption during the last four years. In the fiscal year ending June 30, 1868, the gold value of sugar imported was $47,861,695, while the value in the year ending June 30, 1870, had risen to $59,021,587. The value of Molasses and Syrup imported in each of the two years was about $12,000,000 in gold additional. Of course with such an enormous market the production of Beet Sugar cannot keep up with the demand for many years, supposing it to compare at all with the European product in cost and quality.

I would sincerely thank you to send to me the following data of your operations with permission to use them. 1. Quantity of Beet Root raised in 1870, by yourselves or purchased outside, and at what rate of production per acre? 2. Per centage of sugar in juice? 3. Capacity of your machinery per diem? 4. Character of the product, whether brown or refined? 5. Amount of sugar and molasses actually produced up to the present time in 1870? 6. How many tuns of beets are required to make a tun of sugar? 7. How many cattle do you feed on the pulp? and how much other food do the consume? In addition, I would be glad of any other information you are able or disposed to give, such as the cost of beets per tun, the cost of manufacturing per tun, and the selling price per tun. Of course I have no title or wish to ask any questions with regard to your business, except in its relation to the general ppoblem. Respectfully yours,

WM. F. CHANNING, *Secretary*.

[REPLY.]

Wm F. Channing, Esq., Sec'y, &c:

DEAR SIR—I have received your favor of January 21st, inquiring respecting the culture of Sugar Beet on this Coast, and the success of the manufacture of Beet Sugar, data, and have procured for you the following data relative to the Alvarado Sugar Factory at Alvarado, Alameda county, the only Factory yet in operation on this Coast.

The enterprise was inaugurated something more than a year since, and the manufacturers are now about concluding their first season's works.

There was raised and procured by farmers in that neighborhood something over three thousand tons of Beets last year. Farmers was paid three dollars and fifty cents per tun for their Beets delivered at the Factory. The Beets were sown late—say from the 15th of April to the 25th of May. The best yield of Beets per acre in any one field was twenty tuns. The stand of Beets in any field was not good, they were generally sowed too deep. We find the seed wants to be covered, say half an inch to an inch deep—not more than this. The last product of sugar will not be worked for several months yet. It lies in vats and crystalyzes, and this process require several months, therefore, cannot state with anything like exactness what the yield of sugar will be.

The Factory can work fifty to sixty tuns of Beets per day. About one-half of the product will be produced in refined sugar from the first process, half of the remainder from the second process and the balance from the third and fourth processes. The Alvarado Factory will probably make in the neighborhood of five hundred thousand pounds of sugar from the first crop of Beets, and expect to increase it largely the coming season. The first Syrup product will probably amount to twelve or thirteen thousand gallons.

The sugar made is all refined white sugar thus far, and commands ready sales.

No minute data as to the exact quantity of Beets required to make a tun of sugar.

No stock has been kept at the factory to be fed on the pulp—another season a more full data can be given as the works will be enlarged and others completed.

We reply as far as data could be obtained from actual experiment such as is reliable, and remark further that there is another Sugar Company at Sacramento, that have prepared several hundred acres of ground for planting the Beet, and to go into working order another year.—ED. F.]

What is it that goes up the hill and down the hill and yet never moves?—The road.

Agriculture.

SILK INTEREST IN ENGLAND.

In March last there was a large meeting in London to consider the Silk interest, the *British Trade Journal* send out their Circular of its doings:

"During March a steady demand has prevailed but not equal to the effect anticipated to be produced by the conclusion of peace. This in some measure may be explained by the difficulties of transit which continue to impede the traffic upon the Continent, and the civil war raging in Paris and which appears likely to spread to all the principal towns in France. It is hoped that when these temporary impediments shall have been removed, we shall then see that the inquiry now manifested will result in an increased business. China has sold well, and prices have been fully maintained. In Japan, the coarse sized silk of good quality has been dealt in at relatively full prices. Canton have during the last few days been selling in considerable quantities, and are firm at present rates. Some business has been doing in Bengal, especially in the native sorts. Italians are less active, increased prices having checked business. Manufacturers generally have supplied immediate wants at the lower rates lately ruling.

The annual meeting of the Macclesfield Chamber of Commerce was held recently, Mr. W. O. Brocklehurst, Mr. P., the president, in the chair. The report stated that the war had the effect at its outbreak of paralyzing the silk trade. The Americans, however, and other foreign buyers, who were unable to obtain their supplies as usual from Lyons, had been compelled to give their orders in England, and thus a demand in new markets had been unexpectedly created. With reference to the French Treaty, the Council stated that they intended to seize the earliest opportunity which presented itself after the declaration of peace to appoint delegates to give information in reference to the silk trade, in order that the existing tariff levied by the French on the importation of English ribands, spun silks, and especially those on mixed goods, may be modified or abolished altogether. The report was adopted, on the motion of the chairman.

SILK CULTURE IN JAPAN.

The third report upon silk culture in Japan, by Mr. Adams, one of Her Majesty's Secretaries of Legation contains an account of a journey undertaken for the purpose of ascertaining the progress making in the culture of the silkworm. To this is appended a series of drawings that illustrate the observations made by the party, and a map showing the route taken upon this and a former occasion. Owing to the manifest interest which the Japanese Government were evincing in the matter, it was considered an act of courtesy, and likely to prove beneficial in an international point of view, if a Japanese gentleman were associated in the expedition. Accordingly, a near relative of one of the highest officials was asked to join the party, and we learn that, for the first time, a native of rank has been associated with foreigners in an extend tour through the country in the interests of commerce.

The party left Jeddo on 7th June, 1870, and, for the first time, came upon the mulberry plants about forty miles distant from the capital, where their investigations commenced. The 10th and 11th were spent at Shimonita, a place apparently not hitherto visited by foreigners, although it has always been famed for producing some of the best hanks of silk that were sold in the Yokohama market. There was an appearance of health about the people, of cleanliness about the rooms appropriated to the worms, and it was evident that silk culture was the one important business of the whole locality. The most interesting visit of the first day was to the house of Ishgami Sanyemon, who said that silk culture had been practised in his family for a hundred years, and that he himself had reared worms for eleven years. The seed came originally from Shinshin, the great silk district of Japan, but now that his worms were partly hatched from these eggs and partly from his own; that he reared them in general for eggs, to be sold as well to people in the neighborhood as in Yokohama; that last year there were a great many "oji," but that this year a good crop was expected, owing to the favorable weather and to the healthy appearance of the worms. These were found to be in first-rate condition, mostly approaching the period of spinning, and no particular disease was complained of. He showed the party his mulberry plantations, and pointed out several kinds of trees. Drawings of six different varieties of leaves which were taken may be found annexed to the report.

One important object of the journey seems to have been to gather information respecting the *Bombyx yamamai*, or oak silk-worm, which is reared in the open air. To do so, it was necessary to visit Matsumoto, the native land of this species. In the neighborhood, it appears that there are sixteen villages, the inhabitants of which form an association called the "Matsukawa-gumi," and are entirely engaged in the culture of the "yamamai." According to the information given by the head-man and others, this culture was first initiated about forty years ago, and since then has gradually taken greater dimensions, till the number of cocoons annually sold by the association alone is computed at not less than 20,000,000 The three principal informants stated that the number which they severally reared each season averaged 170,000, 100,000, and 80,000, the price of each thousand being estimated at about four dollars; also that the cocoons, as well as the silk now met with customers from an extended circuit. The best sort of silk is sold at about 640 riyos a picul, and the inferior at about 530 riyos. A stout kind of netting is manufactured from the silk, and it is also made up with other raw materials, such as cotton.

The elaborate and scientific observations of M. Guérin-Meneville and M. Personnat in France, and of Dr. Wallace in England, having already made known the habits of the "yamamai," and the mode of rearing it in those two countries, Mr. Adams was satisfied simply to record what he saw and heard in the district. The result of these inquiries are elucidated by very interesting drawings of the trees upon which the worm flourishes with the methods employed for reeling the silk. The persons who gave the information were evidently in easy circumstances, and they answered the questions readily and with intelligence. On the eve of departure, they were invited to a meal, partly Japanese, and partly of European food, in order to testify the sense entertained by the party of their willingness to assist with all the practical knowledge which they possessed, and there is reason to believe that, upon this and other occasions, the visit of Europeans will be remembered with some little pleasure. At another point, called Margebasi, where Mr. Adams and his party arrived, they found reeling going on in every street, and 300 bales of silk were said to have been already sent to Yokohama. Some of the merchants were very earnest in requesting them to call the attention of the Japanese Government to certain existing defects, and to enforce a uniform system of paper-ties throughout the country. At Shunamura, two new nagnaneries had been created.

Amongst the general observations, Mr. Adams records the increase of the mulberry plants, and in some parts a decided movement with a view to the improvement of the silk. The suggestions which have been made in a former portion of this series of reports, with reference to the necessity of introducing European machinery, in order to remedy the grave defects in the reeling of Japanese silk, and which have been urged upon Governments by the British minister, seem to have begun to bear fruit. Opposition must doubtless be expected at first from many who are accustomed to the primitive system now in use, and whose wives and daughters have found employment in the trade during a certain period of each year; but when once it is shown in different districts that silk reeled by European machinery is superior to that which has hitherto been turned out by the natives, and that it consequently commands a higher price, such opposition will grow fainter and fainter.

The most troublesome question to deal with is that of the "uji." The Japanese silk cultivators have accepted this scourge, year after year, as inevitable: and considering it as such, they have never dreamed of carrying out experiments with a view to discover what becomes of the "uji," or to provide means for lessening its ravages. Appended to this report is a document which has been addressed to the whole mass of silk cultivators by the Japanese Government, in which they urge for written observations to be sent in periodically. But if the observations made this year should lead to no discoveries, then the only course would appear to be for the Ministry of the Interior to cause intelligent experiments to be conducted by competent, men who should visit the various silk districts. Owing, therefore, more especially to the gradual introduction of European machinery, and to the measures which will in all probability be taken to check the ravages of the "uji," reasonable expectations may be entertained that the trade, both in silk and eggs, will show a marked improvement.

---

* The Silk made by the Oak Silk-worm (*Bombyx Yamamai*) is quite different from the varieties made by worms fed on the mulberry or ailanthus. We have samples of the silk made from worms fed on the oak, it is a rich glossy silk, but not capable of being wound from the cocoons as others are done. The samples can be seen at our Reading Rooms, and are curious and very interesting.

SUGAR BEET EXPERIMENTS.

[AT THE MASS. AG. COLLEGE FARM.]

The experiments of the past year have been directed to the cultivation of the sugar-beet, for the purpose of learning what varieties were best adapted to our soil and climate, and what per cent. of sugar might be expected from them.

Professor Goessmann early in the year sent to Germany and procured seeds of the thirteen best cultivated in Saxony and Prussia. These were sown upon the ground which happened to be in the best condition for them and a fair crop obtained, notwithstanding the unpropitious season. The juice of these different kinds of beet was expressed by means of a portable cider mill, and subjected to careful examination to determine the per cent. of sugar. The results were quite variable, but very satisfactory, the percentage varying from 7.20 to 15.16, the average being 11.5.

The accompanying report by Professor Goessmann upon the production of beet sugar in Massachusetts will be found replete with valuable and altogether reliable information, and is believed to be a very important contribution to our agricultural literature. The learned professor is eminently qualified to discuss the subject, having been familiar with the business as carried on in his native country, and having had his attention for many years specially directed to it while engaged in refining sugars.

If the necessary funds be obtained in season, it is proposed to import a large quantity of seeds from Germany, and plant on the college farm and in its vicinity several acres of beets the coming spring for the purpose of manufacturing a few tons of sugar, and thus learning by actual experiment what difficulties are to be overcome, and what results may be reasonably expected in this new but most important branch of industry.

To provide the necessary apparatus for a small sugar factory will require an expenditure of not less than $5,000. A more satisfactory and more permanent establishment, sufficiently extensive to work several tons of roots daily, would cost about $10,000. Such a factory would not only be useful for this experiment, but afterwards serve as necessary apparatus for the education of young men in the art of making and refining sugar.

The soil and climate of Massachusetts are peculiarly adapted to the production of sugar beets of the best quality, and when we consider the marvelous development of the sugar manufacture in Europe, and its extraordinary influence in increasing the productive power of the soil, in improving the methods of farming, in multiplying the number of cattle, and thus in furnishing an abundant supply of sugar, milk and meat. We cannot fail to desire its introduction at the earliest practicable moment. In Germany, France and Russia, the expense of the first experiments have been borne by the government, and now the tax on this crop is a very important source of revenue. In France, more than one-sixth of the cultivated land is devoted to the beet, and the product of sugar the past year was 276,000 tons, yielding a revenue of about $13,000,000, besides 7,000,000 gallons of alcohol, distilled directly from the beet juice and paying a tax of nearly $3,000,000. But the indirect advantages to the government far surpass the direct. More sugar is now produced both in France and Germany than is consumed, although the consumption is rapidly increasing, and, therefore, no money is sent abroad for this indispensible article of food. At the same time the capacity of the country to supply bread and meat is also enlarged to a remarkable degree. In a single limited district of France, the introduction of beet culture has increased the number of oxen from 700 to 11,500, and the annual yield of wheat from 976,000 bushels, to 1,168'000.

The number of sugar factories in Europe is now more than 1,480, and constantly augmenting.

The Agricultural College ought to be made an experimental station, similar to those now so common in Germany, and which are now universally admitted to have paid back to the government many times their cost by the valuable information they have afforded as the result of their investigations. There can be little doubt that the establishment of a fund, the income of which should be employed to defray the necessary expenses of scientific experiment and research, would be a most profitable investment of money in the interest of agriculture. As such undertakings require usually some time for preparation, and must often be continued through a series of years in order to attain conclusive results, it is evident that some permanent provision should be made for this work. If the sum of $1,000 per annum were provided for this object, it would stimulate a spirit of inquiry among the officers and students of the institution and unquestionably result in much good. May we not hope that some wealthy and public-spirited friend of progressive agriculture will soon feel inclined to establish such a fund?

CHEAP INSURANCE AND ITS CONSEQUENCES.

[*From the Chicago Evening Post, Feb. 15, 1870.*]

A few days ago The Post made some remarks on the danger threatening the insurance interests of the country—urging the public, as a matter of self-interest, not to let the idea of *cheap* insurance be the only one in view, but to endeavor to bestow it in such a manner as will support the reliable companies of the country. The public have for some years had the idea that insurance, like other patronage should be bestowed where it will involve the least outlay—and agents, bidding for patronage, have advertised to write policies *cheaper* than others. Of course, irresponsible companies could afford to write policies at much cheaper rates than sound companies, because they do not and have not given absolute indemnity. If they have paid loss, it has been because of the accidents circumstance that, at the time, it seemed to the managers to be to *their* interest to pay, and the other accident, that the company had funds with which to pay. Companies started without capital, trusting to some accidental incident of business to earn a capital, and feeling that if such could not be done, its managers could at least get their hands on sufficient money to compensate them for the wear and tear of consciences and loss of time—companies organized and conducted on this basis, having everything to gain and nothing to lose, could, of course, afford to take risks at whatever rates were offered—while sound companies, with *bona fide* capital, could not compete without almost certain loss. The public, searching after what was *cheap*, and never considering that an insurance *cheap*, at the time of its execution, may be *cheaper yet* in case of a loss by fire, have given these irresponsible companies an encouragement so strong as to compel the sound companies to come down to their rates. As a result, the capital of many of the most responsible companies has been very materially reduced, and they have been placed in a condition where a year or two more of competition, under the cheap "cut" rates of irresponsible companies, will wind up—so says Superintendent Miller, of the New York Insurance Department—half the responsible companies in this country. And we are hastening to a day, if the delusion of *cheap* insurance is not exposed, when, no matter what rates a merchant may pay, he cannot find enough insurance companies in the country whose policies he knows will be paid, to cover a moderate stock of goods. Such a state of affairs, it is hoped, will never prevail, but can only be averted by strangling these "Cheap John" in insurance and patronizing companies known to be sound, at rates known to be safe and reasonable to the companies, regardless of the terms offered by Lan Peter Funks.

Since the remarks made by *The Post*, the other day we have received a copy of the Hartford *Post*, February 5th, which contains an article on the same subject, with statistics showing the disastrous effects of the competition with the cheap rates on the sound companies of the country. The article contains so many valuable facts, that we transfer it to our columns entire. It is as follows:

"Though it has often been repeated, that the year 1870 was a most disastrous one for the Fire Insurance Companies, we think the following figures will surprise all. Those who complain of exhorbitant rates, and clamor for a reduction would do well to read and ponder. We believe it to be for the public interest, and cheaper for them in the end, to assist and sustain our best companies in the maintenance of fair rates—and not to nurse into a brief life weak and unreliable companies, for a small saving in premium. When our wealthiest merchants, largely interested, and even directors in insurance companies, remove their business from our oldest and best companies, for a petty difference in premium of one dollar on a $5,000 policy, we must believe that for such failures as the "Home," the insuring public themselves are more or less responsible, for to too many cases they act without knowledge of the actual condition of companies, but take for gospel whatever an agent tells them, who offers to insure at a low rate, looking more to low rates than companies' high standing. As a consequence, a large majority of insurance companies have been, and still are, selling their wares below cost. Is this true policy for the assured? Superintendent Miller, of the New York Insurance Department, is reported as having said, that a year or two more would wind up one-half the companies in the country. These figures, at least, furnish good foundation for such a prediction.

"From the advance copy of the Spectator's chart, compiled from the official returns, showing the standing of all the companies doing business in the State of New York, we find on comparing the net surpluses with the returns one year ago, that out of 141 companies 81 show a loss amounting in the aggregate to the enormous sum of $2,565,000, some of which is, of course, attributable to shrinkage in assets.

All the foregoing applies equally to California, and it is very necessary that parties seeking actual protection by insurance should look well to the character and ability of Companies. The *best* is always the *cheapest*.

"*The following table shows the loss in the net surplus as compared with last year, of some of the leading New York Companies:*

Ætna	$45,000
Buffalo Fire & Marine	55,000
Commerce, Albany	11,000
Fulton	12,000
Home, of New York	74 000
Market	74,000
North America	42,000
Washington	32,000
Astor	40,000
Capital City	15,000
Continental	11,000
G	90,000
Irving	43,000
Merchants'	47,000
Republic	42,000
Western, Buffalo	18,000
Atlantic	14,000
Columbia	16,000
Corn Exchange	7,000
Hanover	45,000
Lamar	22,000
Niagara	52,000
Security	300,000
Yonkers	54,000

"*The following table shows the falling off of some of the Foreign Companies doing business in New York:*

American, Philadelphia	$174,000
Detroit Fire & Marine	3,000
Franklin, Philadelphia	85,000
Independent, Boston	55,000
Manufacturers'	87,000
Narragansett, Providence	43,000
Norwich	60,000
Boston, Boston	10,000
Eliot, Boston	20,000
Girard, Philadelphia	17,000
People's Worcester	22,000
Lancaster, Pa.	33,000
Merchant's Providence	30,000
Narragansett, Providence	7 000
Cleveland	8,000
Equitable, Providence	53 000
Hide & Leather, Boston	17,000
Providence, Washington	8,0 0
Rodger Williams	6,000
Springfield	42,000
Ben Cleveland	

"*The following table gives a list of the agency companies showing a gain in net surplus of over $30,000:*

Lorillard	$47,000
Phœnix	61,000
Merchants', Chicago	33,000
North American, Philadelphia	132,000
Manhattan	26,000
National, Boston	30 000
Pacific, San Francisco	35,000

which list is lamentably small.

"*The following shows the losses in surplus of the Hartford companies:*

Ætna	$40,000
Charter Oak	16,000
North American	27,000
City	13,000
Phœnix	75,000

"*Companies showing a gain:*

Hartford	$110,000
Merchants'	7,000
Connecticut	24,000

"Thus out of 141 companies only eleven companies have shown a gain in surplus."

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 24 2-100 per cent. For life-giving properties to all stock and to sudden changes of weather or over-driving it is equal to none.

For MILCH COWS it is particularly valuable, increasing the quantity of milk and greatly improving its quality to a far greater extent than any feed known. A suitable quantity for them is one quart in the morning and one at the commencement to one quart at night, either alone or mixed with any other food generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other food and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($35 per ton,) it is the cheapest feed in market. It is now selling in New York at $40 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on the coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

PACIFIC OIL & LEAD WORKS,
NOS 3 AND 5 FRONT STREET,
San Francisco.

TRUE'S IMPROVED POTATO PLANTER.

This is, undoubtedly, one of the most valuable machines adopted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops those pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed.

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse, plant six acres of potatoes in a day, is of incalculable value; because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

WARREN & CO.,
320 Clay street, upstairs.

Fresh, Pure Seed.

Fresh Garden, Flower, Fruit, Herb, Tree and Shrub, and Evergreen Seeds, prepaid by mail, with directions for culture. Twenty-five different packets of either class for $1.00. The six classes $5.00.

40,000 lbs. Evergreen and Tree Seeds, Apple, Pear, Cherry, &c.; Grass Seeds; Beet, Cabbage, Carrot, Onion, Squashes, Turnips, and all Vegetable and Flower Seeds in smaller or large quantities, also Small Fruits, Stocks, Bulbs, Shrubs, Roses, Verbenas, &c., by mail, prepaid. New Golden Banded Japan Lily, 50c. Priced Descriptive Catalogues sent to any p ace address, gratis. Agents wanted. Wholesale Lists to Agents, Clubs and the Trade. Stocks on Commission.

B. M. WATSON, Old Colony Nurseries and Seed Warehouse, Plymouth, Mass. Established in 1842.

BEE KEEPER'S DIRECTORY.

By J. S. HARBISON, Apiarian, Sacramento.

THIS BOOK HAS BEEN PREPARED by the Author with great care and the devotion of much time. From the experience of many years as an Apiarian, the Author has given results that must be of great value to all who have Bees. Every person who contemplates keeping of Bees should have this book, a volume of over 400 pages, fully Illustrated, price only $2 50.

Horticulture.

THE USE OF FLOWERS.

God might have made the earth bring forth
Enough for great and small;
The oak tree and the cedar tree,
Without a flower at all.

He might have made enough, enough,
For every want of ours,
For luxury, medicine and toil,
And yet have made no flowers.

The ore within the mountain mine
Requireth none to grow
Nor doth it need the lotus-flowers
To make the river flow.

The clouds might give abundant rain,
The mighty dews might fall,
And the herb that keepeth life in man,
Might yet have drank them all.

Then wherefore, wherefore were they made,
All dyed with rainbow light,
All fashioned with supremest grace,
Up-springing day and night.

Springing in valleys green and low,
And on the mountains high,
And in the silent wilderness,
Where no man passeth by?

Our onward life requires them not,
Then wherefore had they birth?
To minister delight to man,
To beautify the earth.

To comfort man—to whisper hope,
Whene'er his face is dim,
For who so careth for the flowers,
Will care much more for Him.

HORTICULTURE AT MASS. AG. COLLEGE.

The operations in this department have been confined mostly to the care of the Durfee Plant-House, the vineyard, the orchard, and the nursery, and the preparation of the plan and grounds for planting the Arboretum and Botanic Garden.

The Victoria Regia has blossomed freely and is still thriving. This magnificent species produces the largest flower and leaf of any plant in cultivation. The leaf has been grown to the size of nine feet in diameter, and capable of floating the weight of an ordinary man. The flower resembles a superb water-lily, being white with a beautiful rose colored centre, and attains a diameter of one foot.

The noble specimen of Stenocarpus Cunninghami, presented by Colonel Wilder, has bloomed abundantly and attracted much attention from the richness of its evergreen foliage and the singular beauty of its flowers.

Several new species of particular interest have been obtained, and the general condition of the plants under glass is good. A valuable collection of plants has been received from prof. Asa Gray, o the Cambridge Botanic Garden, and some choice seeds of Conifers from the Pacific coast have been presented by Dr. George B. Emerson of Boston. Many species of tree seeds have been sown in the open ground and a large number of young specimens are coming forward.

The most urgent want of this department is glass houses for the cultivation of choice plants and garden vegetables. If, in addition to the extensive structures erected by Dr. Durfee, there were built three hundred feet in length of houses like the present propagating pits at a cost of $3,000, the expenses of this entire establishment might be defrayed by the sale of plants, flowers, and vegetables. This would save at least $1,000 per annum to the treasury, and render the instruction in horticulture much more practical and useful than it can be at present.

After much study, a design for the Botanic Garden and Arboretum has been perfected, with the assistance of the late accomplished chief gardener of the New York Central Park, Mr. I. A. Pilat, who has, also, prepared a catalogue of desirable species for planting. The accompanying plan includes an area of about forty acres which is admirably adapted to the purpose for which it was designed, as will appear from an examination of the plan of the farm, where its topography is exhibited. It is proposed to proceed with the laying out of these grounds as soon as a fund of $50,000 has been secured for their perpetual maintenance. It is confidently expected that citizens of taste and wealth will be willing to contribute toward so desirable an object. The income of such a fund would not only serve to keep these ornamental grounds in order, but, also furnish means for the support of indigent students who would gladly do the work for moderate compensation. Such a garden would not only be exceedingly delightful as a place of resort for students of both the colleges of Amherst, and for the public generally, but would be extremely useful for scientific purposes, and for the acclimation and trial of new and valuable trees, shrubs, and herbaceous plants. As the gifts of private individuals to this department have already amounted to more than $35,000, and as the Durfee Plant-House and the Knowlton Herbarium have been highly appreciated by all who have visited them, it cannot be doubted that the work so well begun will be carried forward to completion.

INCREASING THE FLAVOR OF FRUITS.

For a number of years past there has been a decided tendency on the part of fruit growers, and more especially those who cultivate for market, to grow only large fruit, or rather varieties of small fruit of a large size. We are not surprised at this, from the fact, that however insipid and flavorless a strawberry may be, it will always command the highest price in the market, if it is only large and fine looking. Hence, with the cultivator, it becomes a matter of dollars and cents. Fruit growing for profit is his business, and it is to such, generally, a matter of indifference whether, the fruit is of fine flavor or otherwise, so that it finds ready purchasers at good figures. It would be simply folly to argue against such a spirit, and as long as people are content to sacrifice the sense of taste for that of sight, we have no right to object.

But it does not follow, necessarily, that large fruit is obtained at the expense of its flavor. Every horticulturist knows that a wet, cloudy season invariably produces greatly increasing acidity in small fruits, and this is especially noticeable in the peaches and strawberry. The result is, of course, beyond human control. But not so in some other cases. We believe that it is in the power of a cultivator, who has not too keen an eye to profit, to command a flavor. "The method," says a first-class authority on this subject, "is to thin out severely."

This same writer assumes that if a peach or plum tree is allowed to mature five or six dozen of fruit where only one-half that quantity should have been permitted, the result will be a flavor of decided inferior quality. A case in point is cited: a favorite plum tree in 1851 bore a light crop, of fruit, all of which was carefully preserved. The aroma of the fruit, when made into puddings and tarts, was delicious. In 1862 the crop of plums on the same tree were so abundant as to hide the leaves. The usual quantity was preserved, but the fine aroma of those of the previous year was wanting. From all of which he insisted on the following; "By thinning you make indifferent fruit good. By crowding you make good fruit bad." We are aware that it is asking a great deal of an amateur to thin out fruit, but it will pay in the end when quality and not quantity is desired.

SUMMER LABORERS.

Those who have to work in the sun in the heats of summer will find, upon a fair trial, an incalculable advantage by arranging to take their breakfast and be ready to go to work soon after daylight. Leave off work at twelve o'clock. Take dinner, sleep two hours, and begin work again at three; or it might be better to stop at one o'clock and resume work at four, and be in bed at nine o'clock; this will give them full six or seven hours' sleep at night, and nearly as in the daytime. Thus refreshed by a sleep in the afternoon, they will be able to work with the vigor of the morning, and will escape to the dreadful task of three hours' labor in the hottest part of the day, which is so fatal to many. Hod-carriers, bricklayers, carpenters, and other mechanics make a sad mistake when they wait until after sunrise of a summer morning before they begin their day's work; the result being, that in the cool of the day they do nothing, and work hard in the boiling sun at noon during the fiercest heats of midsummer. Many of these men may be seen any summer day, at noon, during the time allowed them for dinner, fast asleep on the bare ground, which, if the least damp causes them to wake up with a disagreeable tiredness and stiffness, ending after a while in rheumatism, to trouble them through all after life. A coat for a pillow, and even a newspaper spread under them, would be a great protection; but a board board would be much better, in the absence of a stout coat.

DORA'S DREAM.

The first of May did not always come with warmth and bloom in the land where Dora lived. A chilly east wind would blow on May Day; and, even if there had been flowers in the field, it would have been too cold for a little girl to go to pluck them.

But Dora loved to think of going a-Maying; and once, when she lay ill in bed on the last night of April, she had a dream. She called her mother to the bedside, and said,—

"O mother! such a queer time as I had in my sleep last night. I dreamed it was the first of May, and that I went out in the field before breakfast in search of flowers; for I wanted to give you all a sweet surprise.

"I climbed over the fence beyond the five-acre lot, and ran down the hill; and, oh! such heaps of flowers as I saw,—roses, lillies, daisies, pinks, violets, and harebells, and how many more I can't tell you, there were such heaps of them.

"After I had gathered as many as I could carry, and just as I turned to go home, I saw Jane Burton coming down the hill; and I said o her, 'Jane these flowers are mine, and you must not touch one of them;' for I did not like it that she should carry home as many as I.

"But I had no sooner spoken the words than all the flowers turned to weeds; and then a beautiful fairy came, and said to me, 'The flowers all sprang from the state of your own mind. You were at first good and kind and so you saw heaps of lovely flowers but, as soon as you grew envious and stingy, they all turned to weeds.'

"Now, was not that a queer dream mamma?" asked Dora.

"Yes," said mamma; "and I think the fairy was right, and that we shall see beauty around us if we will only keep the heart beautiful and pure."
—IDA FAY, in "*Nursery*."

Fortune makes that man a fool on which she too profusely bestows her favors. Nor is this remark to be confined to the more weak and silly part of mankind, for even the wise are too frequently intoxicated by an uninterrupted course o prosperity.

NEW

AGRICULTURAL

BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA. By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

THE GARDEN VEGETABLES OF AMERICA. By Fearing Burr.....Price $1 50

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,

COMMISSION

SALES-ROOM

—AND—

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders shall be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns (several of which we have the exclusive sale for this Coast.

LIFTING HAY FORK,
WITH OTHER VALUABLE IMPLEMENTS.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

TREE SEEDS

OF ALL THE VALUABLE KINDS.

Also,

TOBACCO SEED.
COTTON SEED.
COFFEE-SEED.
TEA SEED.

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental Seeds.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference.

FLOWERING BULBS.

RARE AND CHOICE KINDS

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

Please remember that Lawns can be made so as to be perfect at any season of the year.

FINEST MIXED LAWN GRASSES,
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

EVERGREEN AND DECIDUOUS SHRUBS,
ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

ORANGES, LEMONS, FIGS,

Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kind

GREENHOUSE AND BEDDING PLANTS.

These are grown at our residence under our own care where they always can be selected.

Any one desirous of having their Gardens look gay throughout the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference

WARREN & CO.,

Farmers' Headquarters. 220 Clay Street, up-stairs.

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING, APRIL 27, 1871.

THE CALIFORNIA FARMER READING ROOM AND MUSEUM OF NATURAL HISTORY

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, *for one insertion*, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them or their examination, hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

☞ Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER.
San Francisco, Cal.

OUR NEW YORK AGENCY.

Geo. P. Rowell, & Co., 40 Park Row, New York

AND

S. M. Pettengill & Co., New York

Are the Sole Agents for the CALIFORNIA FARMER in that city. They are authorized to contract for our Journal for the Advertising and make Collections for the same at the very lowest rates.

Our many Patrons in that city and State are requested to call on them, give their business to them and subscribe for our Journal which will always be found on file at their READING ROOMS.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* of our *Journal*, to which we would direct their *special* attention.]

The "Home Department" has one of Alice Carey's Gems, in the poets corner—(the name was by omission left out.) The story addressed to Women is worth reading and worth remembering.

The matters about the "Silk Interest in Europe should be understood, as the business here has received a severe check, it will be wise to look the case steadily in the face.

The progress at the Agricultural College of Massachusetts is worthy imitation in some other colleges in our country.

We are again indebted to Hon C. Cole at Washington D. C. for valuable Congressional papers.

We acknowledge same favors from Hon. Eugene Casserly, also.

We have the 9th Annual Report of Medical Department of the "University of the Pacific," Session of 1871, with Catalogue of "Board of Trustees;" Faculty, and List of Graduates, with cost of Board, College Expenses and all needed information for the Student, all indicating the general success of the Institution.

NEW POULTRY BOOK.

We have received from the office of the *Rural New Yorker* a new work called "The Peoples Practical Poultry Book" being a complete Treatise upon the subject of Breeds, Breeding, Rearing and all the various means and skill needed in the management of Poultry.

This work is fully Illustrated with very excellent and very correct representations of every kind of domestic Poultry known, and giving Illustrations of all the buildings, coops, pens, feeding-racks, houses, boxes, troughs, etc.—being over 120 Illustrations. This book is gotten up in excellent style and handsomely bound.

This work has been well and carefully compiled by Wm. M. Lewis, Esq., and will prove an excellent guide to Poultry raisers. D. D. T. Moore, Publisher. We can commend the book highly.

MASSACHUSETTS AGRICULTURAL COLLEGE.

We tender our thanks to the Trustees of this most excellent and prosperous Institute for their 9th Annual Report of the College, containing the handsome Illustrations of the College and all the buildings and college grounds with conservatory etc., together with the condition of the college and the operations of the past year and with valuable essays and reports on crops.

The Report furnishes list of the Trustees, Officers, Professors, Students and all appertaining to the workings of the college. The Report contains very interesting and valuable matter and showing conclusively a most judicious, successful and prosperous management of the college and reflecting honor upon the President, Trustees and all connected with the College. We publish this week from the work some of the interesting matter found therein which gives us pleasure to report upon—and wish we could so report upon the progress of the college here with us.

THE SEASONS, CROPS, &C.

What shall we say of the Season now? and what of the Crops?

There is a great deversity of opinions over our entire State. In those regions where the cultivation was light the blight has fallen, and the *cry is lost crops* and total failures, such persons think the loss is general over the whole State, while in districts where the culture was good, the growers seem satisfied; and feel assured the entire crop of the State will be more than a general average, and *we* feel confident that every person who has been over the grain region, and has carefully noted the crops in their growing condition, noted carefully the systems of culture, the time of planting, and also the state of the soil, will agree fully with us that the failure of Crops this season is not to be attributed to the *want* of rain wholly, but more for want of care, forethought, knowledge of soil, manner of culture, &c.

We are glad to notice that in every section of our State discussion is had upon these subjects. The Press speaks freely against poor cultivation, and overworked, starved soil, and we feel assured as we have often said, these *disasters*, as they are termed, will work for good, it will teach cultivators that the soil must be *better worked*, and if we *work it hard* we must *feed it well*. In the great majority of cases where the crops have failed, a careful examination will show the causes of failing crops, not to be *want of Rain*, but want of Cultivation, so as to permit the roots to go down and find the moisture, or late planting or exhausted soil.

We have recently, the past two week again visited many grainfields, in different sections, and we do not change our opinion, but feel reassured of a good general crop, in some places a superior even an extra crop. We find in many districts on the hills, and on mountain sides superior, crops even to their very tops. A trip over Contra Costa from Oakland through the hills across Morracco Valley, Lafayette to Walnut Creek, the Grain and Grass is really luxurious. At the latter place we saw extra heavy Grain, remarkable Barley 4½ feet high broad blade, heading out, and Wheat of good promise.

We ask particular attention of Grain-growers, who may be in our city to the samples of Barley, Wheat and Rye at the Merchants' Exchange, of which we speak in another column, these samples showing the different effects of *deep* and *shallow plowing*.

Another good will result to our State from the disappointments to many by reason of *lost crops*, they will turn their attention to other crops besides grain, and thus our State will be blessed by a diversified agriculture, a subject we have urged so earnestly for years.

There is still another good which will come out of this *apparent* evil, which we only look upon as a *blessing in disguise*. It is this, we have too many farmers who lean entirely upon a Grain crop, *don't like to work all the season*, they never feed the soil, never raise their own vegetables, do nothing more than half the year, never "earn their bread by the sweat of the brow" because they don't *love to work*, their Homes and surroundings proof of neglect and want of care.

This class of men will of necessity be obliged to give place to a better class, a *working class* that will change the face of nature, and make the desolate looking place creditable and prosperous. These new comers will *work*, feed their stock *well*, feed their land *better*, plow deep, cultivate more thoroughly, create a new era, and evidently kill out the croakings about poor crops, and adopt every kind of crop to the right kind of soil, planted right in the right season. These are the "Good Times" we are looking for.

THE SKATING MANIA.

This great *sensational* Pleasure this new form of systematic sports, has spread over our State until every city has several "Skating Rinks" and all our principle towns one or more according to their size.

Skating can be made a very pleasing and healthful recreation if enjoyed properly but like everything in California, it will be *overdone*. Already the mania for this sport has resulted in serious injury to several, by reason of over exertion, too much skating and exposure.

At our most prominent "Rink" some very splendid and graceful skaters can be seen but the great mass that are seen appear more like gymnasts who desire to show samples of *ground and tofly tumbling*.

Graceful skaters are few and far between, such are worth seeing, all others are unsightly, and only afford theme for amusement. So great is the *furore* in our city that at Woodward's Gardens the "New Mammoth Pavilion" recently erected, will now be used as a "Grand Skating Rink" for the masses that visit those very interesting Gardens.

The question now is, how long will the *Skating Sensation* last? It has outlasted the "Velocipede Mania," but is it of a character to be lasting? We say no. A single year and a new sensations will come, but what will that sensation be?

MAY GALA WEEK.

No opening of the month of May has been so universally kept as the present year. Military Parades, Associations of all kinds even Christian associations, Sabbath Schools, Fire clubs and Engine companies—all seem to vie with each other to see who can have the best time, and who can create the greatest excitement, and in these gatherings our Rail Roads, Steamers and other conveyances have been taxed to their utmost capacity on some occasions, even so as to make it dangerous. Thus far no serious accidents have occurred.

These festive scenes still continue and will through May, as the *furore* is now upon the community, and everybody is going a "Maying"—everybody is going to the "Pic Nic."

NEW FIBRES IN CALIFORNIA.

THE RAIE.

Ramie and New Zealand Flax are destined to work a revolution in the manufacturing interest of our whole country.

The Ramie is now attracting attention in all the Southern States and preparations are going on for its culture on a very large scale, as it has been proved to be a very valuable fibre, supplying a want that has long been felt.

The Ramie, as a fibre when properly prepared, is of a silky, glossy character, and to mix with wool or cotton in manufactures, nothing equal to it has yet been discovered, it must, therefore, prove a valuable material for all kinds of goods, either woolen or cotton where a brilliancy or gloss is desirable.

The rapid growth of the Ramie, its long and strong fibre, makes it valuable, the fibre being often seven and eight feet long and of the strongest character. We are glad to know that it will be thoroughly tested in California. As the plantations made by the Association formed, will show this fibre in its growing state and permit all who feel an interest in it to go and examine the plants for themselves now in the growing state.

The Ramie association have their plantations near Haywards, on the lands of W. Meeks, Esq., and we advise all interested to take a trip there and see for themselves. Mr. Finch, the manager, has gone East to examine and bring out the best machinery for breaking and manufacturing the ramie. This machinery will be placed at the Mechanic's Institute Fair in August, and also at the State Fair at Sacramento, and at these places, break and work the fibre experimentally and practically.

It should, however, be the object of our cultivators simply to grow the fibre, and break and prepare it for *shipment to Europe*, they can use it there—all we can grow—they want it, will pay well for it, they understand its uses, and they can manufacture it better than we can at present. Our climate is very peculiarly well adapted to its growth, and we can make it a great staple, and of great value to the State as well as to the grower of it, as it will pay better than wheat or any other grain.

NEW ZEALAND FLAX.

This is another very important fibre worthy the special attention of our land holders. As the *Ramie* is kin to Cotton, so this *Flax* is kin to Linen. And as the Ramie is designed to add to the beauty, strength and usefulness of all the materials for clothing for man, so this flax is designed for material for all kinds of bagging, baling cloths, cordage, twines and even baskets, matting and various other uses. The fibre is of great length, and of great strength. The plant is large, strong, growing like the Century plant; will grow on any waste, almost useless, rocky land. Our Sage brush hills, or our levees and dykes or a "breakwater" or swampy land or dry, once planted always planted. The Southern States are planting it and California should not be the last in the race with this important fibre.

The New Zealand Flax is grown, or rather, grows wild at New Zealand and is gathered by cargoes for Europe, where the fibre sells from £35 to £70 per ton. At New Zealand it is made into baskets, cordage, twine and various uses, and the trade of that coast is immensely large.

Those who desire to see the fibre—the baskets, or cloth made from it can see them at the Farmers Reading Room, where also the fibre of the Ramie can be seen, each of them in all their varieties.

WATER FOR THE FARM.

Water! Water!! Water!!! is always wanted on a Farm and should be had in full abundance. We do not say merely for irrigation but for *Stock, Family*, and *general use*, and also as a protection in case of fire.

Among the *best* and *most* valuable inventions offered as a PUMP, none are more certain and reliable than the *Gerrish Submerged double-acting Force Pump*.

We have seen many Pumps, but those who use the Gerrish Submerged, tell us that it is the

BEST PUMP IN AMERICA.

This pump is celebrated for its great *simplicity*, and the ease with which it works; the power of the stream of water it draws. It is about equal to a *fire engine* in case of any danger of fire.

This pump works well at any depth, it is very durable—more so than any pump yet made, and the very best to be attached to a wind mill.

We would commend all who are in need of a RELIABLE PUMP to call at Messrs. Linforth, Kellogg & Co.'s, 3 and 5 Front street, and see this pump work.

HAYING SEASON.

The Haying season has begun in many places, yet it is not all the usual "Hay making" but the cutting of *grain fields* that are supposed to be a failure for grain and will make capital Hay, and it is worthy a thought of our Farmers, that as choice hay is now $20—$23—if grain fields that would have yielded 20 bushels to the acre of wheat, and wheat 2½ cents this would be $30 per acre; if the same field gives 2 *tons Hay* at $20 per *ton* will they not do better to make Hay and save the bags and cost of threshing?

FLAX AND HEMP CULTURE.

Flax culture has been steadily increasing for several years, and as more care and attention has been given to the cultivation of flax, particularly for seed, this crop has been a good paying crop, and pays better than grain, and stands the drouth better.

Perhaps we may say there has been careful attention given to the preparation of the land and if the same skill had been bestowed upon our grain land, our crops would have been better. The flax crop will be good this year.

HORTICULTURE FOR WOMAN.

Some little time since we called the attention of the members of the new Horticultural Association of our city to the great importance of obtaining the aid, assistance, and influence of all those Ladies in our State who take an interest in the cultivation of flowers, to come forward, become members of the Horticultural Society, and labor for its interests by taking an active part in its exhibitions and contending for the Premiums—by showing what women can do to beautify. We were glad to notice that the Editor of the *Horticulturist and Florist* approved and heartily seconded our suggestion, he will we trust see the good plan carried out in that society.

In support of our views and of the great good that would result from such a movement in that Society, we give reports from the Horticultural Society of Massachusetts at Boston, with the number of Lady members and the premiums they have borne off above the competitors of the other sex.

We find enrolled in that society, *five* Life members, and *twelve* annual members. We also see by their Weekly and Annual Exhibition that these Lady members are among the most liberal Exhibitors, and active members for exhibitions, and their collections and variety, choice and rare, often taking the very first premiums.

At the last annual meeting of the society, held on September last, *Eight lady members* bore off Premiums of value, amounting to about *sixty dollars*. Their display of fruits and flowers through the season, always being highly creditable, while their presence, labors, and socializing influences were of inestimable benefit to the Society, ever tending to promote its highest interest and *usefulness*.

We therefore hope the California Horticultural Society will take immediate steps to secure the co-operation of Lady members at once, so the Society can have their help at the coming Fair.

The Lady contributors to the society numbered twenty-two and the amount of premiums won by these ladies was $405, and one of the societies' silver medals. The amount of the societies' Premiums and Gratuities during the year, was $2,036, of which the Lady members won one fifth of all. Well done Lady Florists!

THE MECHANICS FAIR OF 1871.

We have received the circulars of the Mechanic's Institute, announcing their Fair to commence in this city, August 8th.

The announcement gives a wide scope and gives a programme for a very grand Fair. The managers, no doubt, will make every exertion to have the coming Fair the best ever held on this coast.

We shall keep our readers advised of its progress, and soon furnish more particulars.

A very liberal Premium list will be offered.

FRUIT AND FLOWER SHOW.

We learn with pleasure that the *Horticultural Society* of this city have completed their plans to have a grand Horticultural and Floral Display this year, in connection with the Mechanic's Fair. They will have a building erected especially for the purpose, and nothing will be left undone to make it a show worthy our State.

The Society will offer a list of premiums of the most liberal kind, and it is hoped every friend of these interests will give the work a helping hand.

THE SWIVEL PLOWS.

We call special attention to the new Swivel plows, which are figured in our columns. They will be found to be of superior excellence for special uses—in the orchard, to plow to and from the trees, and thus completely do the work of pulverizing the soil. For our side hills and rolling lands they are just what is wanted as the plowman goes round his work without changing the plow-shear, and returns leaving his work done smoothly and well.

The Swivel plow for our "Summer fallow" is just the plow to do this work in the right way—the only way that land for "Summer fallow" should be prepared, i. e., by return or "back furrow" so as to leave the land in high ridges. This kind of work will be done admirably with the "Swivel Plow. By the *return* or *back furrow*" when land is thus plowed, when the rain falls the excess of water is held in the furrow and *sinks into the ground* below what is plowed, and is thus saved to the land, and is thus reserved for the crops when planted. But when the land is plowed level much of it passes off or is lost by evaporation, and thus the crop looses what might have been retained by ridge or back furrow. And for this work, the "Swivel Plow" is the best, for this plow goes over the ground and returns, does the work completely and without changing the mould board.

FIRE AT ANTIOCH.

A serious fire took place in Antioch on the 22d. Some ten or twelve buildings were burned. Loss $20,000, *only one-half insured*. There can be no excuse for running *the risk* of ruin, when the cost of insurance is so reasonable, a few dollars, comparatively, deposited at the PACIFIC INSURANCE COMPANY in our city and the loss is soon made up, buildings, and property restored, and *Ruin* avoided.

☞ WE MEAN WHAT WE SAY.

A capital thing for traders to say and *do*.

Messrs. John Rohr & Sons say in their advertisement:

They *mean what they say*, i. e., They sell as Good as the Best and as Cheap as the Cheapest and and they *mean* to give all their customers *satisfaction* as well as pleasure.

REDUCTION OF INTEREST.

A Loan of $700,000 has been made in our city at 8 per cent by one of our banks to a large capitalist. This is an evidence that money is plenty-ful and can be had at low rates.

WOMANS' RIGHTS—WOMANS' CLAIMS.

[It seems we are now having the question of "Womans' Rights" decided by our Great Medical Convention, now in session. Where the end will be no one can tell. We give two extracts from our exchanges on *Mans'* and *Womans'* Claims.—ED. F.]

NEW ORDER OF THINGS.

The clamor for men's rights in England is beginning to wax as vehement as that among the other sex for theirs. The system of marriage settlements, which customs had made rigorous as law, has long made the British wife among the upper and middle classes in a great measure independent of her husband. The property which a woman brought to her husband was by common consent set apart and preserved intact as dowries for her daughters. Now, however John Bull, goaded by the taunts of Lady Amberley and her followers, declares his intention of giving them all the independence they, ask and something more. The *Examiner* proposes that the dowry of the daughters shall be given them hereafter in the shape of a profession or a trade, instead of the usual money. Here is a nice test for the reality of their wrongs. Would it could be applied! In that case we are pretty well satified that the good judgment of Americans would dictate to them that the least *dot* they could give their daughters would be a first-class commercial education.

*London.

WHAT WOMEN REALLY WANT.

Gail Hamilton thinks women have a great deal of human nature, and according to her, testimony they are like men in one respect at least. She says: "Judging from what we hear, we should suppose that the great and crying wants of women is work. This is not so. What woman wants is not work, but the wages of work; not freedom to work, but freedom to receive money without working."

A GOOD NEWSPAPER REPORTER.

The *Reporter* of Messrs. Geo. P. Rowell & Co., of New York, the well-known and very popular Newspaper Advertising Agents (our Agents in New York and Middle States) are sending out a very neat and handsomely printed Weekly Reporter of 12 pages, containing a large amount of interesting matters appertaining to Newspaper men, we also find many pleasant and amusing items, as well as news intelligence, together with advertising intelligence relative to Types, Printing Presses, &c.

The Publication of Messrs. Rowell & Co., is a very creditable one and will prove valuable to newspaper men. This Journal makes the following very just and appropriate remarks upon

SENSATIONAL REPORTING.

The tendency to sensationalism is one of the worst features of reporting at present, and seems to be on the increase instead of lessening. Many writers for the press are employed to do nothing else but get up sensational articles, and they are constantly tempted to expand simple facts into the most romantic and fantastic combinations. This weakness shows itself most in criminal and social matters, and it reaches a climax in the headings given to articles of this kind. Such racking of brains and refined torture of words as has to be gone through for these ends is known only to the initiated; but it is made apparent by reference to the files of almost any daily newspaper.

WOMEN REPORTERS.

Of late, several women have entered upon the press, and have been quite successful as reporters. Miss Nellie Hutchinson has long been engaged by the *Tribune*, and has made quite a reputation for herself; while the *Star*, *World*, *Times*, Brooklyn *Union* and *Revolution*, have all employed women, either occasionally or permanently, upon their staff. The latter are well adapted to succeed at reporting, which requires quick perceptions, and insinuating address, and a graphic style in writing; all of which qualities are the natural possessions of the sex; and it is not unlikely that in time certain positions on the press may be monopolized by women.

THE SCOTCH THISTLE—WHY IT IS SCOTLAND'S EMBLEM.

One time the Danes invaded Scotland and they prepared to make a night attack on a sleeping garrison. So they crept along as still as possible until they were almost up to the spot. Just at that moment a barefooted soldier stepped on a great thistle, and the hurt made him utter a sharp, shrill cry of pain. The sound awoke the sleepers, and each man sprang to arms. They fought with great bravery, and the invaders were driven back with much loss. Thus the thistle saved Scotland, and ever since it has been placed on their seals as their nation's flower.

CALIFORNIA VEGETABLES IN NEW YORK.

Messrs. A. H. Cummings & Co., of Sacramento, has recently sent a large collection of Vegetables to the New York market.

They aroused a great attention and "FEAST DINNERS" are now all the fashion.

FINE FIELD OF FLAX.

The Hollister *Californian* has this notice:

The Malcolm brothers, whose lands are about five miles to the northeast of Hollister, have 300 acres of flax planted which is already in bloom. Last Fall we argued the practicability of flax culture in this section, and tried to induce our farmers to try the experiment, but the Malcolms are the only farmers that have tried it to our knowledge, and though their wheat crop should fail they cannot fail in getting a good return from their flax crop. Last season the early flax brought six cents per pound, and as it ripens here earlier than in any other portion of the State, a good price can always be relied upon.

When is a man like a looking-glass?—When he reflects.

ONE WAY OF IMPROVING LAND.

It perhaps has occured to but few farmers to employ the roving herds of summer at manure making. It may be done thus:—

Select a spot adjoining an outside fence, and enclose it well on the three sides inlongsides. Haul leaves from the woods, muck from ponds or swamps, or anything that will rot into a good manure in ten or twelve months, and spread over this lot three or four inches deep. If there are not several trees in this lot, make shelters for shade by placing poles upon forks, putting a floor of rails across these poles, and cover thickly with pinetags. Enclose large pieces of ground alum salt in boxes having a hole in their tops large enough for cattle to get their tongues in conveniently. Place these boxes firmly upon posts about over the lot. Make a gap in the outside fence, that everybody's cattle that come along may walk in. As soon as they find out the salt, this lot will become a grand congregating place for all the cattle of the vicinity—a perfect camp-ground of the bovine species. They will make the shelters their resting place, by day and by night, and will continue to come so long as the supply of salt (which must be added occasionally), holds out. Of course they will drop their manure here; and by winter you will have the satisfaction of owning, at least one lot that has been well manured, at small expense. So long as cattle run at large, we think it right that *somebody* should have the benefit of the manure, if they can get it.

SCOTCH FIR.

This is a native, of Britain and of the most northerly parts of Europe, being common in Russia, Denmark, Sweden, Norway, and Lapland. In favorable situations it attains 80 or 90 feet in height, and 3 feet diameter. It attains perfection at the age of eighty or ninety years. The color of the wood differs from reddish yellow to various degrees of brightness. The best kinds have the dark parts of the rings of a bright reddish color; the wood is dry and hard to the feel, neither leaving a wooly surface after the saw nor filling its teeth with resin. The best Norway is the finest of this kind, and the best Riga and Memel are not much inferior. The inferior sorts have thick annular rings, and the dark parts of the ring are of a honey yellow, the wood hearty and filled with a soft resinous matter, which feels clammy to the touch, and chokes the saw. Scotch fir is the most durable of the pine species. It was the opinion of the celebrated Mr. Brindley that red Riga deal or pine would endure as long as oak in all situations. Its lightness and stiffness render it superior to any other material for beams, girders, joists, rafters, &c. Deals imported from Christiania are generally cut into three lengths usually of about 12 ft. each, and are afterwards cut by saw mills into deals, each length yielding three deals. The British North American white spruce is not so resinous as the Norway spruce. It is tougher, lighter, and more liable to twist in drying. The color of spruce fir or white deal is yellowish or brownish white. The hard part of the annual ring is a darker shade of the same color. It often [illegible] especially in the American and British grown kinds. Each annual ring consists of two parts, the one hard and the other softer. The knots are generally very hard. The clear and straight grained kinds are often tough, but not very difficult to work, and stand extremely well when properly seasoned.—*British Trade Journal*

THE BATTLE FIELDS OF FRANCE.

The London *News* in its picture of the grounds which have been scenes of blood and carnage so lately, thus pictures scenes for the coming year for the great rush of Travelers to these places to be noted in History.

"There is already the evidence of this being a great season for the Traveler, there will be a great rush of Americans to Europe for pleasure traveling, this season. Many of them will be curious to visit the famous battle fields of last summer's war, for still the great mile stones of history are its battle fields, and to these, almost more than any other scenes in the world's movements, are the people attracted. But what will probably strike visitors as the most inexplicable thing connected with these battle fields is, that they were ever battle fields at all. "Ardennes waves above them her green leaves." They will see spring corn and summer wheat, and will have to take everything upon trust. The stain are already "earth in an earthy bed;" but by May or June they will "blossom in purple and red." The valley of the Moselle will be alive with apple-blooms; that o the Marne will dazzle the eye with vernal beauty The copses of Brittany will have hidden their dead under violets and anemones, and the birds will trill peacefully overhead. Thus many will forget pitched battles, to note the repairing power of mother Nature, and their state will be the more gracious."

MAKING CHANGE.

The new "Nickel Money" 1, 2 and 3 cent pieces will now permit all to make the exact change for each party, buyer and seller.

This is as it should be. And now all persons can make the proper change. This will break up many little businesses where all the profits consist in the overplus thus made between 10 or 15 cents—which amounts to a great per centage daily in some trades.

HORTICULTURAL EXHIBITION IN OREGON.

A meeting of the Trustees of the State Horticultural Society at a meeting held May 1, when it resolved to hold a Public Exhibition of fruits, Flowers and vegetables in the month of June—great preparations are in progress and the Fair promises well.

MONEY IN STATE TREASURY.

The money in the State Treasury was counted on Tuesday last, by the Board of Examiners and then found to be $732,106 ,59.

HOPE.

In the short and fleeting lifetime of man who a tumultuous dream is his! Ever changing in scenes, in effort and intention, his retrospect of it at the close of his career must be singularly bewildering. Blighted hopes, promises unfulfilled, affections slighted, dependence unreliable, and all the lights that once so dazzled in the distance now past by and faded or extinguished. Would not a prescient power or instinct, if possessed by man, cause the machinery of the human world to stand still from very fear of known consequences? Were the chemist pre-advised of the fate often awaiting him in earnest search after knowledge, would he go so enthusiastically into it as the true lover of science invariable does? Were not the very ingratitude which awaits the completion of grand undertakings hidden from the mental eye, how limited would be the pale of civilization today! Had Columbus foreseen his latter days, would he have troubled his mind with his waking dream of a new world to be discovered? And what a different state of things would exist now had he been possessed of foreknowledge and shrunk back from his adventures! Steam, that mighty power which draws the limits of the earth closer and closer, might still have been the simple emanations of a tea-kettle and nothing more. The locomotive and the steamship, wondrous as their aid in civilization's progress undoubtedly is, might, in view of the wholesome human sacrifices which have thus far accompanied their course, been left unborn in the womb of futurity. There is not a scientific expedition or a thought in practical philosophy that would not be retarded or subdued by a knowledge of some fatal event awaiting their development, and all mankind would necessarily shrink from effort and dwindle into barbarism. With his vast accumulated fund of knowledge in every department of progressive science, man can scarcely comprehend the magnitude of the future which is awaiting a coming generation; and it is well that his fore-visions is so limited, for otherwise it must be accompanied by the fearful knowledge of human sacrifice awaiting its development It is true that the destructive influence of certain discoveries bears but an insignificant proportion to the vast amount of profit accruing to man from the knowledge gained in them. But even that proportion, trifling fraction though it be, would, if forseen, be sufficient to deter many a mind from the pursuit of its possession. A wise and beneficent Providence guides us forward blind-folded as to the future or to consequences and hence we tread fearlessly onward and strike boldly the scientific fact, the enlargement of which is a destructive doom for many. Man's progress is aided by his ignorance of the future and its events, since hope with her rainbow-hued prospects is thus enabled to lure us on to achievment of great things that would never be attempted, if we but knew how far they would fall short of our expectations.

MOST
IMPORTANT IMPROVEMENT
EVER MADE
ON
Sewing Machines
CAN BE SEEN IN USE AT THE
HOWE SEWING MACHINE
OFFICE.
No. 113 Kearney Street.

READ THE FOLLOWING INDORSEMENT,
signed by some of the most
Prominent Physicians:

"We the undersigned, practicing Physicians of San Francisco, having examined and witnessed the operations of

MILLS'
ADJUSTABLE TREADLE

For Sewing Machines, take pleasure in giving our testimony to the great value of the improvement, in a sanitary point of view. The peculiar feature of this new Treadle is that THE FOOT-BOARD IS MADE ADJUSTABLE BOTH VERTICALLY AND LONGITUDINALLY; so that whatever the size or shape of the foot or shoe, THE TRUE CENTRE OF MOTION OF THE FOOT MAY ALWAYS BE BROUGHT TO COINCIDE WITH THE CENTRE OF MOTION OF THE TREADLE, AND HELD THERE, thus permitting the feet to move on their natural centre without having first to overcome the inertia and weight of the heavier limbs.

First—It saves the excessive labor and waste of power consumed in keeping up the rapidly alternating motion of the lower limbs and body, whenever the maching is run with any speed.

Second—It avoids the frequent and serious injury to female health resulting directly from that motion.

By the general adoption of this Treadle we believe the only serious objection to the foot-power sewing machine will be removed, and that so far from being prejudicial to the health of the operator, its use will prove as harmless and positively beneficial as other physical exercise, tending directly to develope the muscles of the calf of the leg, strengthen the ancle, restore the elasticity of the foot, and promote circulation in the extremities."

Signed,

H. H. TOLAND, M. D.,
President Toland Medical College.
G. HOLLAND, M. D.,
H. H. HUBBARD, M. D.,
J. CAMPBELL, SHORB, M. D.,

L. C. LANE, M. D.,
Professor of Surgery, University of the Pacific.
C. T. DEANE, M. D.,
Physician S. F. Female Hospital, and Professor Diseases of Women and Children in Toland Medical College.

"I have carefully examined the New Treadle attached to the Howe sewing Machine, and consider it a valuable improvement, doing away with most of the motion of the back and pelvis, which is unavoidable in operating the old style treadle, and which has proven so detrimental to health. I cheerfully recommend it to those who work with Sewing Machines believing it to save them much suffering.

35.14 S. M. MOUSER, M. D."

Home Miscellany.

MY PICTURE.

[The following beautiful Poem, by this highly gifted Poetess, whose memory will ever be linked with beautiful thoughts and sentiments, will be specially valued by those who cherish the memories of the "Loved and Gone before."

Of all the beautiful pictures
That hang on Memory's wall
Is one of the dim old forest,
That seemeth best of all;
Not for its gnarled oaks olden,
Dark with the mistletoe;
Not for the violets golden
That sprinkle the vale below;
Not for the milk-white lilies
That lean from the fragrant hedge,
Coquetting all day with the sunbeams,
And stealing their golden edge;
Not for the vines on the upland
Where the bright red berries rest;
Nor the pinks, nor the pale sweet cowslip,
It seemeth to me the best.

I once had a little brother
With eyes that were dark and deep;
In the lap of that olden forest
He lieth in peace asleep;
Light as the down of a thistle,
Free as the winds that blow,
We roved there the beautiful summers,
The summers of long ago;
But his feet on the hills grew weary,
And one of the autumn eves
I made for my little brother
A bed of the yellow leaves.

Sweetly his pale arms folded
My neck in a meek embrace,
As the light of immortal beauty
Silently covered his face;
And when the arrows of sunset
Lodged in the tree-tops bright,
He fell, in his saint-light beauty,
Asleep by the gates of light.
Therefore, of all the pictures
That hang on Memory's wall,
The one of the dim old forest
Seemeth best of all.

TO A YOUNG PHYSICIAN.

BY JOHN G. WHITTIER.

"The paths of pain are thine. Go forth
With healing and with hope;
The suffering of a sin-sick earth
Shall give thee ample scope.

Smite down the dragons, fell and strong,
Whose breath is fever fire:
No knight of fable or of song
Encountered foes more dire.

The holiest task by Heaven decreed,
An errand all divine,
The burden of our mortal need
To render less, is thine.

No crusade thine for cross or grave,
But for the living man.
Go forth to succor and to save
All that thy skilled hands can.

Before the unveiled mysteries
Of life and death, go stand
With guarded lips and reverent eyes,
And pure of heart and hand.

So shalt thou be with power endued
From Him who went about
The Syrian hill-paths, doing good
And casting devils out.

That holy Helper liveth yet,
Thy friend and guide to be;
The Healer by Gennesaret
Shall walk the rounds with thee!"

LIFE.

What a varying thing is the stream of life! How it sparkles and glitters! Now it bounds along its pebbly bed, sometimes in sunshine, sometimes in shade; sometimes sporting round all things, as if its essence were merriment and brightness, sometimes flowing solemnly on, as if it were derived from Lethe itself. Now it runs like a liquid diamond along the meadow; now it plunges in fume and fury over the rock; now it is clear and limpid as youth and innocence can make it, now it is heavy and turbid, with the varying streams of thought and memory that are ever flowing into it each bringing its store of dullness and pollution as it tends towards the end. Its voice too, varies as it goes; now it sings lightly as it dances on; now it roars amidst the obstacles that oppose its way; and now it has no tone but the dull, low murmur of exhausted energy. Such is the stream of life! yet perhaps few of us would wish to change our portion of it for the calm regularity of a canal—even if one could be constructed without locks and floor-gates upon it, to hold in the pent-up waters of the heart till they are ready to burst through the banks.

Distinguished men are composed of great and little qualities. Much of their greatness arises from their struggles against the imperfections of their nature; and their noblest actions are sometimes set forth by the collision of their virtues and foibles.

TO WOMEN.

BY ELEANOR KIRK.

The lie of the age is—"Not at home." In the whole dictionary of falsehoods, there is not one so often uttered, and that, too, with such apparently recklessness, and disregard of moral consequences as this. Very few women hesitate to instruct their servants in this particular, and very few servants are sufficiently high-toned and truthful to refuse to lie at their mistresses' bidding. I heard of one, though, the other day; but I must confess that I have had more hope of the ultimate salvation and happiness of the great domestic family than I ever had before; for we may safely affirm that the uncompromising honesty and independence of *one* such, should be able to make up nobly for the want of it in a hundred or two less honest and resolute among the kitchen sisterhood.

"Oh! I have got such a splendid up-stairs girl!" said a friend the other day, quite enthusiastically.

"She is simply perfect. In all my house-keeping, I have never found such a treasure. She is so capable, so honest, such a pains-taking seamstress, and then so kind to the children, and so pious. I am not afraid now to go away of an evening to leave my family. I know they will be taken care of."

I congratulated her of course. Such opinions of the genus chamber-maid are exceedingly rare, and if I may be allowed to add the housekeepers who know how to treat such servants with the proper kindness and respect, are equally so. I had no fear of my friend; for I believed her to be one of the most loveable women in the world and entirely just in every particular. A few days after the above statement, I called by appointment to take lunch with her. What was my surprise to find my friend in tears—and the gem of an up-stairs girl, whose virtues had been so minutely dwelt upon and described, waiting with her things on, for final marching orders from her mistress.

"What in the world is the matter?" I asked. "You and Fanny both in tears, and she all ready to leave! why I thought you told me she was perfection itself."

"Oh dear!" she replied, with a sob. "I thought so too, but that girl has driven me almost frantic to-day. Do you know I have been obliged to lock the children in the nursery, because they go on so about her going. Oh, dear! oh dear! oh *dear*—and I was just as infatuated myself."

"But what is it?" I interrupted. Has she been stealing, or lying, or both?"

"No, no, no! Nothing of that kind; I don't believe Fanny would take a pin that didn't belong to her! You know those horrid Todds. One of 'em my husband is in business with. Well, they bother my very life out with their everlasting visiting, and when they get inside of the door, they are so sociable and informal, that they invite themselves to lunch and to dinner, and to spend the evening, exactly as if they were conferring a favor upon me by so doing. Quite as much for Charlie's sake, as because I am a moral coward, have I always treated them politely, and even cordially. Well, to-day, as I stood looking through the blinds, out of the window, I saw the old maid Todd, who is the biggest bore of all, heading for the house. I thought about your coming to lunch, and knew that she would spoil our good time, entirely and determined to be "out." Fanny was just coming up stairs as the bell rang. Said I in a whisper, "Fanny, tell that lady I am not at home!"

Such a look as the hussy gave me, and walked straight into my room.

"Fanny," said I, "Why in the world don't you open the door?"

"Because, Mrs. Burt," she replied, with a much deliberation as if that confounded old maid wasn't pulling away at the gong.

"Because, as much as I like you—I cannot tell that lie to oblige you."

"But—" I reasoned—"That is no lie, Fanny! It is simply a social phrase which means nothing. It isn't at all likely that I would ask you to tell a regular *lie*."

"It is nothing *else* to me!" she answered doggedly, "and I wouldn't tell it for my own mother."

Just then I heard the cook making for the door, and I leaned over the banisters and said: "Not at home, Sarah!" and the deed was done. Of course, after such an act of insubordination, I was compelled to discharge Fanny; and she has been such a good girl. It makes me sick to think of it."

"It makes me sick to think you are such a fool," I could not help answering.

"Discharge a girl because she has too much principal to lie! This morning congratulating yourself that you had at last found an honest and capable servant, and this noon sending her away, because this very honesty makes it as impossible for her to lie *for* you as *to* you. If you haven't quite lost your senses, you will take off that girl's things, and make what reparation you find in your power."

"Apologize to my servant?" said she with flashing eyes, and burning cheek.

"*Yes, ma'am!*" True nobility always takes its hat off to principle. Your servant, this time, is your moral superior, and for the sake of her influence on your children, to say nothing of the good she may be able to do you, it is your duty to keep her in your family if you can."

A little rough, certainly, but not a whit more than she deserved. For a full moment she sat in silence, then hastily excusing herself, left the room. The lunch bell rang, and as we seated ourselves at the table, I was deeply gratified to find Fanny occupying her usual place, attending to the wants of the family. It had been a great trial to the good girl, and her eyes were red and swollen with weeping, but, thank heaven, principle conquered for once.

Now, I do not think Mrs. Burt at all to blame for her dislike to the Todd family. They were just what she represented, a set of bores, social sponges, going from house to house, smelling out good things to eat, and bit bits of scandal to roll like sweet morsels, under their tongues. But the first question is, what right has a woman to allow herself to be bored? What right has any one to trespass upon your valuable time? Who has a right to invade your home sanctuary? There is only one decent way of disposing of such folks, and that is by giving them fully to understand that their room is better than their company. "Not at home," aside from its lying significance, only postpones the evil day. They will come to-morrow or next day, and ostly enough in all probability to insure a reception. Do you ask what Mrs. Burt should have done in the instance above cited? This. She should have gone down to the parlor, and after a formal lady-like greeting, remarked, "Miss Todd, you will be compelled to excuse me this morning. I have an engagement, shortly, which will occupy all the time I have at my disposal to-day," or words to that effect. If, after that, she persisted in dropping in the simple word "engaged" might possibly reach her case. In fact I never saw but a few who would not care by an occasional application of this conventional rod! And for this reason I do not believe in the use of the word between friends. Ladies with great apparent justice complain, that they are obliged in sheer social self-defence, to plead "not at home," because of the affront conveyed in almost every instance where they declare an engagement. In large cities where it spells a whole day to make a single call, on account of the distance to be traversed, it is very hard for a lady, after a three or four mile trip, to present herself at a friend's house, and be informed that the individual in question is engaged. To me it seems utterly heartless, and for my own part I should never, under any circumstances, ring *that* door-bell again. This may be exceptionably excusable; but only so. There might arise extreme cases and great emergencies, sudden household troubles where this would be a sufficient apology, but such armistice calamities are exceedingly rare, and even under the pressure of the most distressing circumstances, a true woman will always remember the friend who waits in her parlor. From the bottom of my heart, I really believe that women should plead engaged much oftener than they do. I believe that many waste years of valuable time upon vain, heartless, and stupid men and women, who haven't a thought above the adornment of their own persons, and the discussion of their neighbors' wardrobes. It is seldom of the least use to attempt to play missionary to such. Precept and example are alike lost upon them, and the result reached by the missionary is invariably nervousness, and brain demoralization, if no other. "I may have a sincere regard for a friend, and yet be up to the eyes in some kind of housework or sewing, and in disabille, what can be done then? you ask. If a friend waits, one you care to see, I haven't the least doubt you will find it easy enough to manage. I am of course speaking now to those who are known to be workers by their friends. If a gentleman, and you cannot leave your picking and preserving, run up and tell him so. Surely, your wrapper and linen collar will admit of such a visit. If a lady, invite her down. Ten to one you can teach her something, and ten to one she would enjoy her call under such circumstances, a thousand times more than in the drawing-room. Do anything but say you are engaged to a friend, or not at home to an enemy.

BORN PERFECT.

"Has it any deformity?" is one of the first questions the mother wishes answered about her new-born babe. It should be a source of daily and life-long thankfulness, deep, and sincere, and humble that a child is not deaf, or dumb, or blind, or hump-backed, or club-footed, or hare-lipped, or dreadfully marked on the face, a lunatic or a fool. The time will come when child-bearing will become more a matter of scientific calculation and arrangement than it now is. If the same care was exercised in this direction as in the management of the domestic animals, it certainly would elevate the race in physical beauty, perfection, and power; would expand the intellect and mould the heart, the moral-emotions, to a pattern nearer to the Infinite.

A city paper announces that "The two-headed girl are on exhibition in Philadelphia. They is eighteen years of age, and waltzes together beautifully. She are twin sisters." Nathaniel Wilson died lately in Boston at the age of thirty years, weighing seventy pounds; the flesh seemed plastered on the bones; his arms measured two and a half inches round, and his legs were not much larger; and for six years he had been in this sad condition; and it is significantly added, "He seems to have inherited from his mother the extraordinary peculiarities which marked his physical condition." The question here arises before the intelligent mind, Is it not a great wrong, an inhumanity, for any person to marry, who is not in vigorous health? If we shrink from marrying into an insane family, a like prudence applies to diseased connections.

DEATH ON THE FLOOR.

Serious and fatal illness has sometimes followed getting up from a warm bed and stepping on a plank or stone floor, or upon oil-cloth; to place the bare feet on a carpet and walk about, even for a few minutes, endangers illness, especially in feeble constitutions. Parents are often called up suddenly in the night to attend to the wants of infant children. Inconvenience, discomfort, and troublesome sickness can be avoided by having a pair of cloth slippers at the bedside, large enough to admit of a thick layer of wool to be attached to the bottom and sides; they can be instantly put on, even in the dark.

Boston has subscribed $178,315 for its proposed museum of fine arts.

SOMETHING NEW.

$1,000 TO $3,000 PER ANNUM

EVERYBODY AN ARTIST.

WITH my new English Art of Painting and Drawing Oil Paintings, Landscapes, Portraits, and all kinds of Scenery, any person without previous experience can paint a life-like picture of himself or herself, or of any relative, friend, General, Statesman, or Scenery, in two hours' time. The chemicals and everything necessary to paint 20 or 30 pictures can be secured at any good drug store, exclusive of apparatus for drawing, for $2.50 to $3.00, or I will forward the outfit ready for work for $1.00. For permanent, profitable employment this is the best business ever offered to the public. You can teach it at your own homes, in towns, school districts etc., and make money rapidly and honorably. A class of 50 scholars at $5 per scholar, can be taught in from two to four hours. At Spencer, Ind., I made $16 in one hour teaching this new art. At Shelbyville, Ind., $45 in four days, and at Greensburg, Ind., from $5 to 15 each evening through the entire week. At Alliance, O., I received $400 for four weeks' work, and wherever it has been introduced it has proved a perfect success. As parlor ornaments these pictures are unexcelled for beauty and durability. I am permanently engaged as a teacher in the V. M. & F. College, located at Valparaiso, Ind., so that none need hesitate to send for this art. Satisfaction given or the money will be returned. For full and complete instruction both for painting and apparatus for drawing pictures, remit $1 to

What they are thought of by the leading organists of the Pacific Coast:

"Superior to any instrument of their kind."
Mr. GEO. T. EVANS, the well known Composer, and Organist of the Church of the Advent, S. F.

"I Recommend the Burdett for superiority of tone, delicacy and power, and in every respect far ahead of all other reed instruments."
Mr. S. D. MAYER, Organist of St. Johns Church, Oakland, Cal

"After trying the Burdett, I take great pleasure in adding my voice to the many already sounding their praise."
Mr. H. M. BOSWORTH, Organist of Calvary Church, S. F.

"Far ahead of all I have ever heard or tried."
T. W. C. RHIND, Organist of Howard Street M. E. Church, S. F.

"Examining the "Burdett Organs" I was greatly and agreeably surprised at finding such variety, delicacy and power."
R. T. McCABE, Organist St. Francis Church, S. F.

"Consider the Burdett the finest of reed organs."
CHAS. H. HOFFMAN, Organist of the Mizpah Street Synagogue

"The most effective reed instrument for Church School or Parlor."
J. MULLER, Organist St Ignatius Church, S F

"A decided novelty and great improvement on the many styles now in use."
GEO. SCHUCKE, Organist of the Methodist Church, San Jose.

"Surpassed my expectations of a reed instrument and comprises everything needed from the solemn music of the church to the popular music of the day."
EVERETT POMEROY, Organist of the Presbyterian Church, San Jose

"They excel anything of the kind I have ever seen before."
Mr. JAS. R. LAWRIE, Santa Clara

"Their volume and purity of sound is far superior to any reed instrument I have ever seen, and combinations most perfect."
D. H. BERLIN, Professor of Music, Stockton.

"The combinations, power and delicacy in all cases are surprising, and I cheerfully recommend the Burdett."
W. CARMICHAEL, Organist of St Marys Church, San Jose

☞ Our descriptive price list now ready. Schools, Churches, Lodges, etc., will be dealt liberally with, and accommodation extended to responsible buyers. Address Gear's Music Store, Agency for the Pacific Coast, 623 and 625 Clay Street, San Francisco.

Miscellan

A STORY OF A GRAVEYARD.

A correspondent of *Notes and Queries* writes: In the churchyard of Tewin, Herts, is a remarkable ash tree growing out of the tomb of Lady Annie Grimstone, nee Tufton, daughter of Lady Tesner, who died in 1713. The tradition is that being doubtful of a future state, she expressed a wish or prayer that if there were a future state, a tree might grow out of her heart. What foundation is there for this tradition? The editor adds: Oddly enough, the following paragraph, extracted from the *Spiritual Times* (December 23, 1865,) bearing on the same subject, reached us almost aneously with the above. To use the words of our correspondent, Mr. Axon, "Can any one elucidate this marvellous legend?" No reference to it is made in Clutterbuck's "Histories and Antiquities of the County of Hertford." "An Atheist's Prophecy Fulfilled.—The churchyard of Tewin, in Hertfordshire, is a spot of some interest to the curious, from the fact of its being the resting place of the mortal remains of Lady Annie Grimstone. The old wife's tale of the neighborhood is to the effect that the said Lady Annie Grimstone was an atheist without a shadow of belief in the deity, and that so firm was her belief in the non-existence of a God, that at her death-bed her last words were to the effect, that, if God existed, seven elm trees would grow out of her tombstone.

Whether such words were used, and in such a manner, it is impossible to determine; but, whether the tale be correct or not, seven elm trees have sprung up through the solid tomb, and have broken away the solid masonry in all directions, making the reading of the inscription a difficult and almost impossible feat. The iron railings that surrounded the monument are in many places firmly imbedded in the trunks of the trees. The numerous names carved in all parts of the trunks attest the number of visitors curiosity has drawn to the spot.

The trees are each distinct and separate, and, notwithstanding the strangeness of the locality, appear to thrive well. Many suppositions to account for their growth have been started, but some are of so improbable a nature that the country people still cling to their favorite old story of Lady Annie's atheism.

AMATEUR PRINTING.

Mr. J. Francis, of Rochford, Essex, sends us particulars of an excellent scheme which he is introducing to the public for the above amusement. His improved hand-printing presses are supplied at low prices.

It is powerful and easily worked, requires no fixing, and can be put away in any corner when done with. It is composed of a bed-plate for supporting the type. The sides have inclined, planes on which lie friction rollers; there are two edges employed, the top surfaces of which are parallel with the planed ribs of the press-bed: between the press-bed and the surface of the wedges are two other friction rollers. A connecting bar moves the wedges simultaneously by means of a jointed rod, pinned to lever handle. On depressing the lever handle the bed of the press rises the proper distance, it being guided by four standards. The platten is sufficiently strong for withstanding the pressure, and the weight is taken off the hand in working the same by means of a spring, which acts as a counterpoise.

To instruct would be proficient in "ye ancients arte of prynteynge," for whom it will be confessed this platten press we have just described in especially designed. Mr. Francis publishes a practical little pamphlet containing every necessary information for its acquirement conveyed in an exceedingly clear manner, advancing the learner from the simplest rudiments of the art to some of its highest ornamental branches. We have before us some specimens of the work performed by this press, and we consider that, not only for purposes of amusement, but in many departments of business life, this handy little press will become almost a necessity for such work as printing paragraphs, labels, small handbills, &c., when out comparatively few are required.—*British Trade Jour.*

PARCHMENT PAPER.

Experiment have proved that a much superior article to the present can be manufactured by employing commercial sulphuric acid, or oil of vitrol in an undiluted state the new process moreover, permitting the acid to be used in a cold state, and the operation to be carried on in a room at any ordinary temperature. Parchment paper, manufactured by this method, retains its qualities after being wetted and dried; whereas that produced by the usual process, when treated in a similar manner, loses to a great extent its pliancy, and is stiff. The invention, to which letters patent have been granted, consist in passing the paper through a solution of alum and thoroughly drying it previous to its immersion in undiluted acid, thus preventing any undue action of the corrosive principle of the vitriol. The patentee also claims, as part of his invention, the treatment of the paper with acid during its manufacture, by allowing the web, after passing the drying rollers, and with or without previous immersion in the solution of alum, to dip into a tub containing the acid, and then into a vat of water. The paper is afterwards passed through an alkaline bath, being subsequently treated with water to remove the acid. Written and printed paper may undergo this improved process without materially affecting the clearness and distinctness of the letters.—*British Trade Jou nal.*

If any of our readers are troubled with dyspepsia or loss of appetite, let them take a brush and carry comb (don't swallow them), clean off three or four horses before breakfast every morning for a month. If that fails, carry in your own wood and saw it.—*Maine Farmer.*

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attach es to oils in, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Gum, or Gumi

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

WHO MAKES SCRAP BOOKS

'Tis said "In the making of Books there is no End," and we know there are many persons who are always interested in making SCRAP BOOKS, now to all such persons, we have some very important information which will benefit them.

It will be seen by our advertisement of OLD NEWSPAPERS FOR SALE that we can furnish just the *right material for Scrap Books*, for we have in this collection of Old Newspapers, a series of papers of 10 to 16 years and from every State in the Union, and also European papers; also select scientific and literary papers, Journals of all kinds In these papers will be found much of the best Poetry of the age, also Stories, Anecdotes, Relicpes &c., all very valuable, and these we shall offer at the low rate of $2.50 to $3, per hundred. Many of these are 12, 16 and 20 page pamphlets and magazines and other periodicals; those who want these collections will address

EDITOR CAL. FARMER

To Farmers & Gardeners.

If the Garden Seeds you use have proved fresh and true to name, stick to the man who sells them to you; he is worth encouraging. If you have not found them fresh and true, I shall be happy to add your name to those of the fifty thousand farmers and market gardeners scattered throughout the United States and Canadas, whom I annually supply with my *warranted* garden seeds. I raise over one hundred varieties of vegetable seed on my three farms and a every practical farmer and gardener knows, it is for the interest of all who plant to get their seed *directly from the grower.* I invite attention to my Cabbage, Onion and Squash seed My large Vegetable and flower seed Catalogue, abounding with engravings sent *free* to all.

New York—Money is easy at 4 to 5 per cent. on call—6 per cent. on time.

Price of Money in San Francisco.

Money is considered to be very abundant here, yet the rates are 1 to 1½ per cent. per month Bank rates. Large amounts are loaned by capitalists at 10 per cent. per annum, and great loans at 8 per cent.

GRAIN AN FLOUR MARKET.

The Grain and Flour market feels the effect of the Northern and the continuous drying winds and weather.

The *Drought* has no doubt caused much fear as to the Harvest of 1871, the continued reports of loss of crops in many places has led many to suppose the crops a general failure, which is far from being the case for in many sections the crops are not only excellent but unusually good, so much so that we believe, as we have said all along, that the harvest of 1870, will be greater than 1871.

We note the late fall of 4d. the cental at Liverpool, and no advance in New York, our own Farmers, however, acting under the fears of short crops are now "holding on," therefore, little or no Grain or Flour comes to market.

It should not be forgotten that Oregon does not feel the drought, and will have a large harvest this year—larger than ever before, and from all sources we have learned enough as to the crops to feel confident California will have from *Four to Four and a Half Million* bushels to export in 1871.

Barley, Oats, Corn, Hay, Rye, as also Stock Feeds have all advanced and are quick sale at higher rates.

Potatoes, Beans, as also Root Crops are all in good demand at full prices.

SHELL FISH,

SOLOMON TESMORE,

87, 58, 59, California Market.

The Shell Fish are now a staple article in the Domestic arrangement—most families using some kind of shell fish nearly every day. Oyster soups, Crawfish, or Crab sallads, and the sale is increasing rapidly.

CALIFORNIA VINEYARDS AND WINES.

[We take from the New York *Wine and Fruit Reporter* the following paragraphs from a long sketch upon our Vineyards and Vines. Such facts stated abroad do our State great service, even if they only give us credit for half we produce or manufacture.—Ed. F.]

Although the soil, up to the present time, has not been sufficiently devoted to viticulture, California produces more than twenty-five million vines, of which two-thirds bear.

The proceeds are calculated to amount to twelve million gallons. The brandy obtained from the banks amounts to three hundred thousand gallons. While from vineyards not favorably located only $500 per acre are realized, the profit derived from others exceed $2,000, with an expenditure of less than $200 per acre. Even the common mission grape secures a net gain of $100 per acre. That, in order to attain such immense advantages, the productive power must be, as it really is, an extraordinary one, would need no mention were it not of interest to draw comparision between this country and Europe.

While in California the average proceeds amount to 8,000 pounds of grapes, per acre. France and Germany realize only from 3,000 to 4,000 and Ohio 5,000 pounds from an equal area. This circumstance is to be ascribed principally to the advantage afforded by the climate of California; for, while the greater portion of the harvest of the countries above mentioned is often destroyed by frost in spring, hail in summer, and rain in the fall, the climate of California is of such a nature that the grapes grow and ripen under circumstances considered the most favorable for finer grades of wine. Concering the soil—which costs but two dollars and a half per acre, can be obtained from the railroad companies on credit for ten years, Mr. Buehl, in the above named book gives the following directions:

After all that has been said it must be clear to the unprejudiced that the future of the California wines will be a great one, and that the young giant will before long, with few exceptions, not only compete with, but at a later day outvie the best foreign wines. For the special use of the invalid the California wine is even now beginning to displace the European of the same grade, as physicians place more confidence in the purity and genuineness of the native product than in foreign wines, which are generally very expensive and rarely unadulterated

The celebrated Hutchings Printing House, of Hartford, Conn, has turned out what must be called the *magnum opus* of American typography. It is a catalogue of a Latch, Lock and Key Manufacturing firm of New Haven, and was designed by Mr. W. C. Hutchings. Only 2000 copies have been printed, but the cost of the work was $30,000. The paper alone, made expressly for the catalogue, cost $10,000 The illustrations are printed in colors and are marvels of beauty. Some of the pages contain nine colors, and had to pass through the press that number of times.

MARKET VEGETABLES.

TO PREPARE CELERY FOR MARKET.

It is a well known fact and an admitted fact also, that a large amount of the market produce which is daily offered has been hastily gathered and brought to market in a very unsightly and disorderly manner, and it is no wonder that so many complain they *don't get much for their produce*—they don't deserve much, and much of it is thrown away.

If some of our careless and slovenly Market-men would examine the Chinese Market they would see *clean vegetables* and fine specimens, and these mostly tied up so as to make a favorable impression on the buyer.

We take a Chapter on Celery from that excellent little book, recently issued by E. T. Quinn, Esq, called "Money in the Garden," and we hope his plan of preparing *Celery* will induce a like careful preparation for all produce, then the Cultivators would *always find* "Money in the Garden."

TO PREPARE CELERY FOR MARKET.

It is a fact well known to market-gardeners that each kind of vegetable, in order to command the highest price, must be prepared in a certain way; and if this arbitrary rule is not strictly adhered to, the produce will not bring half of what it otherwise would. There appears to be no obvious reason why nine long Radishes tied in a long bunch are not as good as the same nine tied in a flat one; nor why three or four stalks of Celery made up in a round bunch are not as palatable and in every way as good as when made into a flat bunch. Still, in the one case, they will find plenty of customers at the best market rates; while, in the other, there is no demand, and they would not bring enough to pay expenses.

The methods in general use for preparing certain kinds of vegetables for market, are expensive and laborious to the producer. Talking on this subject, a few days ago, with a market-gardener, he remarked that it was more trouble to prepare and market some kinds of "truck" than it was to grow them, and he named Celery as an example. The bulk of this crop is sold during the Winter months, and nearly all the time from the middle of December to the middle of March is spent in preparing it for market. The stalks are taken from the trench to the market-house. This building is provided with a stove, boilers for heating water, a large wash-tub, and two tables, arranged one on each side of the tub. The stalks are then trimmed by taking off some of the outside leaves, so as to expose the heart; the root is shaved with a long-bladed knife, leaving four flat sides, tapering a little towards the end; and the operator cuts a narrow circular groove in about the same position on each root, to facilitate tying.

The stalks, having been sorted at the time of trimming, are now placed in the wash-tub, and, with plenty of warm water and a scrubbing-brush, the Celery is thoroughly cleansed and put out on the tables for bunching. This last operation requires the most skill and practice. A gardener who is expert at bunching Celery can always command higher wages on that account.

The bass matting, or twine, is cut the proper lengths and fastened in a convenient place near the person bunching, who stands in front of the table. Three or four stalks are selected for each bunch, according to the size of the Celery. These stalks are arranged to the best advantage, and the roots are tied closely together by making a single knot around each one, except the last, which has a double or fastening-knot; care being taken to have the outside stalks trimmed nearly alike, so as to make the bunch symmetrical. The tops and all the small stocks are made into round bunches, and sold at a low price for soup Celery.

A person who is expert in bunching will tie four or five dozen an hour, day after day, for weeks at a time, working day and night, I might say; for the market-gardener seldom gets through his work in "Celery-time" before 9 or 10 o'clock at night. The morning is usually devoted to getting in the Celery from the trenches, and the afternoon and evening to trimming and bunching.

When the day's work is finished, the bunches are counted and carefully placed in chests made expressly for the purpose, and forwarded to market.

PROFIT.

Under the former laborious and crude method of cultivating Celery, there is but little profit attached to the crop. It cost, then, from one to one and a half cents a root to grow it; this with the large percentage of loss from rotting during the Winter, left but a small margin for profit. The plan now in general use among gardeners in New Jersey reduces the expense to a half to three-quarters of a cent a root; and in connection with this, by the improved method for keeping it through the Winter, the profits are decidedly increased. When Celery is planted at the distances named, there can be grown on an acre about twenty-six thousand roots. It rarely happens that more than twenty thousand of these are of full size, and worth two and a half cents a root, which would give five hundred dollars for the acre. The balance of the small stocks, tied in round bunches and sold at low prices, would add twenty or thirty dollars to the above ampunt.

This looks like a large sum—and it would be, if there were no losses nor heavy expenses in producing the crop, but it must be marked down as one of the most expensive and troublesome with which the market-gardener has to deal.

POULTRY RAISING.

[We give below a couple of items from the new and excellent Poultry Book just issued by D. D. T Moore, of New York.]

FEEDING POULTRY.

Never stint poultry in the variety or quality of their food. Good food is positive economy. The best and heaviest corn is the cheapest. The best food is that which gives the most of what nature demands for the formation of muscle, bone and fat. Fine bran, or middlings, is richer in two of these important ingredients than any other one kind of food; but being deficient in gluten, is not warmth-giving, and is better when combined with whole grain, which, when mashed, forms wholesome and nutritious diet. Barley is much used in Europe, but should never be the only food in the poultry yard. Fowls do not fatten on it, though for a time they will thrive. Oats are good as a change, but inferior nutriment; if they are browned or roasted and given freely, they prove a good egg-producing food. Buckwheat, however, is the best food to make fowls lay early. They devour the seed greedily, and its heating influence, in winter, is very perceptible. Hemp seed is also productive of eggs, and is very strengthening; it is one of the best things that can be fed to fowls during the moulting season.

THE PROPER FOOD TO GIVE.

In preparing birds for exhibition, flax seed may be given occasionally; it increases the secretion of oil, and gives luster to their plumage. In giving soft feed it should be mixed stiff—not mushy; fowls do not relish it in the latter state. A good food of this kind is composed of equal parts of fine bran and Indian meal. This should be scalded or mixed with boiling hot water to such a consistency that it will break or crumble when thrown upon the ground. Another good soft feed is made of small potatoes, washed clean, boiled, and mashed with an equal quantity of Indian meal. In giving soft feed never use a feeding dish or trough. If the yards are clean, as they should be, the ground is by far the best place to feed them from. The gravel and sand, which adhere to the food are necessary for digestion; besides, poultry prefer to pick their food from the ground.

Do not, on any consideration, neglect to give poultry green food. A little chopped vegetables of some kind, whether cabbage, lettuce, spinach, onions or other greens, is better given every day than a great deal once or twice a week. To secure perfect eggs, lime, in some form, ought to be furnished. Broken bones, lime rubbish, oyster or clam shells, burned and pounded fine, are all good. Beef or pork scraps are productive of good results. In the winter, when fowls cannot supply themselves with insects, worms or grubs, a scrap cake, laid in the hen yard for them to pick at, or a little chopped off and broken up and fed to them, adds not only to their health but largely to the contents of the egg basket! An occasional dish of raw meat, chopped into small pieces and given them will be devoured with avidity. Another way, and one which we have practiced with good results, is to get sheep's pluck and hang it up in the hennery, just high enough to make the fowls fly up and pick it off by piece-meal. If fowls are over-fed with meat it will show itself in the loss of feathers, and prove very detrimental to the brood. Some breeders feed game fowls largely on fresh meat—claiming that it creates a pugnacious disposition in the cock. Whatever is done in the matter of feeding, regularity, as to time, is essential to success

Across the Continent.

The Buffalo (N. Y.) *Courier* of April 11th, thus speaks of the labor of an old and highly esteemed Californian, Rev. I. S. Diehl, whose lectures here gave great interest, and we are glad to chronicle his good works elsewhere The Hon. Israel S. Diehl, late U. S. consul at Java and commissioner to Asia, who has recently been delighting and instructing our citizens with his lectures on the Holy Land, will discourse at St. James Hall, this evening, on a fresh topic. The lecture will be entitled "Across the Continent," and will include descriptions of the Pacific Railroad, California, Utah and the Mormons, the Pacific coast, Central America, &c. The speaker has spent nearly ten years among the scenes he describes, and is therefore fully competent to speak. That he puts his ideas in a most agreeable form, those who have heard him know. He should have a large audience.

A spoiled child—one that played with a can o kerosene.

Over 600,000 seals have been captured by 140 Newfoundland vessels this season.

A PLANTER'S HOME IN FLORIDA.

(From Sketches of Florida in Forney's Press.)

By nightfall we had reached Mr. Means' residence, and received a cordial welcome. Here, for the first time, we had home made butter, which of itself was a treat, not to mention the other good things from Mistress Means' larder. As this gentleman's establishment affords a good sample of a Florida planter's home, I trust he will excuse me for making public some of the details which I noted down. First, like almost every one here he is "land poor," his acres amounting to 5,760. If he could or would sell off the fifty-seven hundred and devote his talents and capital to the sixty no doubt he would be rich. Cotton no longer reigns supreme, though there was a time when he knew no other king. The vicissitudes of his Majesty, both as to price and production, have disgusted sober men not wishing to gamble, and so *a mixed system of farming* is taking the place of *planting*. Now let us see what a practical man will go at down here when he takes up a new course of agriculture. To begin he raises enough corn for his family and cattle. Then he plants enough cow-peas and pindars (anglice, ground nuts) for the hogs; this is the basis of a good larder. Then we have white and sweet potatoes enough to use and some to sell. Cabbages flank the place de resistance, and we now take up the dainties. The strawberry beds produce abundant crops, while blackberries and huckleberries bear profusely in the woods near by—indeed the woods are *near by* everywhere in Florida. We want to see, however, the crops for the money, so we take the carriage and drive down to the side of Orange Lake. That this is the proper habitat of the citrus tribe no one can deny, for here it grows wild. Mr. Means has twenty acres natural grove budded with sweet oranges; twenty-two acres natural trees budded and transplanted; natural trees budded, ready to transplant, sufficient for thirty acres; six acres seedling trees set out; 7,000 seedling trees sufficient for seventy-two acres. When these are all set out he will have 150 acres of orange. Allowing 100 trees to the acre, and 1,000 oranges to the tree, Mr. Means will have 15,000,000 oranges to sell. When I recited all this to Mr. J. M. Hood, the efficient superintendent of the Florida Railroad (to whom I am indebted for many courtesies), he began to count up how many cars he would have to provide to market the 15,000 boxes. We found it would take a train of ten cars every week for four months. I, however, assured him that Mr. Means did not intend to be dependent on his tariff, but had, with an eye to bringing in a competition for his freight, located himself at the water's edge.

SUGAR CANE.

Next, I find, on my list comes eighteen acres of sugar-cane now in and forty acres of sugar-cane to be put in next year. This is supposed to pay well at seven cents per pound, besides giving a handsome quantity of syrup. As an acre will yield from 1,000 to 2,000 pounds of sugar, Mr. Means ought to have thirty to sixty tuns of sweets to sell. Some of his acres of pine land will come into use to furnish lumber to make orange boxes and sugar hogsheads; so he proposes to put the sugar-grinding engine at the wharf and the saw mill along side.

As peaches ripen here at last two weeks earlier than in Georgia, Mr. Means proposes to try five acres of Hale's early, the trees for which he has in the nursery. The peach attains its highest degree of perfection at the South—the "yellows" are unknown—the chief requisite being a sharp pruning knife. (Finding the Judge was short of this article, I handed over mine.)

WINE.

The grape thrives in this soil and climate as if it had at last found its true home. Black Hamburg, chapelas, Muscat, and other foreigners dwell at ease and fear no evil. But the schuppernong is the native, which for quantity throws the other into the shade. So the Judge set out three acres of them and had the vines ready and the ground prepared for eight acres more.

I am sorry to say that the Judge made twelve-and-a-half gallons of wine from one half of the fruit of one schuppernong vine, and tempted my companion into drinking a tumblerful; he also repeated some of the nonsense about the benefits of furnishing a native wine drink for the multitude. The injunction to "be not among wine bibbers" occured to me, and I walked out in the garden.

As guavas are prolific, and the making of guava jelly will furnish occupation for some of the Judge's idle time, he has raised from seed and layers enough for three acres. And lest he should be out of fruit at some season of the year, and want a toothsome tit-bit, he has planted, of bananas and figs about one acre. This short resume of the Judge's operations will indicate the possibilities of Florida agriculture perhaps more vividly than if disconnected from personalities.

As I want to go down with my family to stay at the Judge's from the time of beginning to grind sugar-cane in November, and along through the orange season, and remaining till water-melons ripen their fruit (specially luscious down here) in June; I hope he will take no offence at being made the means of showing what can be done in the way of horticulture in Florida

A FOWL STORY.

But I must hurry on to tell of the great gulf hammock, the wild turkeys, big and fat, for sale at one dollar each; venson haunches for two dollars and a half and Cedar Keys oysters. Stop one moment, however, for speaking of turkeys reminds me that I heard Judge Dawkins, of Gainesville, offer an English lad, who sought a situation as bookkeeper, a chance to raise poultry. Chickens feed themselves the year through on a good range, though it were better, as a matter of protection against two-legged vermin, to have a care of them. So the easy-going Judge offered the young man one hundred acres of land in fee, house and a stock of chickens to begin with, if he would honestly give him half he proceeds. The young man turned away sorrowful, as he was bent on having a clerkship, and he started in the next train.

REMEDY FOR CABBAGE LOUSE.

It is well known that there was a large loss last year by the *Cabbage Louse*, many of our Cabbage-growers losing their entire crop.

The Agricultural Department at Washington, has been furnished by P. T. Quinn, Esq., the Market Garden Reporter of the New York *Tribune* with the following notes on the subject, it will be recollected that Mr. Quinn visited California last year with the Agricultural Committee.

Mr. Quinn says:

On his return from California, last Summer, he found his cabbages infested with worms, and threatened with total destruction. He went to work with his accustomed energy, experimenting, trying everything new and old, promising riddance of the plague, all to no purpose, until he hit upon the following: 20 parts of superphosphate made of slush acid, 1 of carbolic powder, and 3 of unslacked lime, mixed well together and dusted thoroughly into each head four times at intervals of four days. The result was, the saving of 75,000 cabbages, and a loss of but five per cent. The worms would eat fresh lime with impunity, and carbolic powder would destroy cabbages and worms alike, but the ingredients in the proportion named, with the unsavory perfume of the superphosphate, either sickened or disgusted his swarming enemies.

CURE FOR THE PEACH BORER.

M. B. Bateham says, that after two years trial of Carbolic Soap, he feels quite safe in recommending its use as the cheapest and best method yet found for the prevention of injury by the peach borer, and presumes that it will be equally as efficacious for the apple borer. His method of using is as follows: "Take a five pound can of the soap (costing only $2); and turn it into a barrel one-third full of hot water; stir it occasionally and let it stand a few hours, or over night, for the soap to dissolve; then fill up the barrel with cold water—or I sometimes use suspends from the kitchen for this purpose. The liquid is now fit for use. It is a milky appearance, and pungent but not offensive odor. It is too strong for using on plants, but will not hurt the bark or wood of trees, applied with a paint brush around the base of the trees, taking care to have the liquid enter all crevices; it immediately destroys all the insect-eggs that have been deposited, and any young worms which have not penetrated farther than the bark; and I believe that for some weeks at least, unless heavy rains occur, the odor prevents the moth from depositing eggs. One application in July or early in August is sufficient. The barrel of liquid described is sufficient for a thousand trees of bearing size, and an active lad can do the work in two days."

Mr. Bateham's suggestions are valuable, and we endorse his method, but think five pound is too much for one barrel; it had better go over two barrels. If this strong liquid, in one barrel only, comes in direct contact with any tender roots, it will surely kill them; but if dissolved a little more, than it will do the same work of destruction to eggs, with less danger to the trees.—*New York Horticulturist.*

The Lost Found

A member of the South Carolina Legislature, an old bachelor by the name of Evans, got off the following *jeu d'esprit* recently. He was introduced to a beautiful widow, also named Evans. The introduction was in this wise: "Mr. Evans, permit me to present you to Mrs. Evans." "Mrs. Evans!" exclaimed the spirited bachelor, "the very lady I have been in search of for the last forty years!"

A music-teacher once wrote that the "art of playing the violin requires the nicest perception and the most delicate sense, of any art in the world." Whereupon a Western editor comments thus: "The art of publishing a newspaper and making it pay, and at the same time making it please everybody, beats fiddlin' higher than a kite."

Agriculture.

HONOR TO THE PLOW.

Though clouds o'ercast our native sky
And seem to dim the sun,
We will not down in languor lie,
Or deem the day is done:
The rural arts we loved before
No less we'll cherish now:
And crown the banquet as of yore,
With honor to the plow.

In these fair fields, where peaceful toil,
To hope and faith are given,
We'll seek the prize with honest toil,
And leave the rest to heaven.
We'll gird us to our work like men,
Who owe a holy vow,
And if in joy we meet again,
Give honor to the plow.

Let art, arrayed in magic power,
With labor hand in hand,
Go forth, and now in peril's hour
Sustain a sinking land,
Let never sloth unnerve the arm,
Or fear the spirit bow;
These words alone should work a charm—
All honor to the plow.

The heather dress, the meadow drain,
The latent swamp explore,
And o'er the long expecting plain
Diffuse the quickening store;
Then fearless urge the furrow deep
Up to the mountain's brow,
And when the rich results you reap,
Give honor to the plow.

So still shall health by pastures green
And nodding harvest roam,
And still behind her rustic screen
Shall virtue find a home;
And while their bower the muses build
Beneath the neighboring bough,
Shall many a grateful verse be filled
With honor to the plow.

—*Blackwood's Magazine.*

IMPORTANT ITEMS.

GIANT MARMONT POTATO.

A potato known as the Giant Marmont is much praised by late German writers, as occupying the very first rank among potatoes, in consequence of various excellent peculiarities. A single tuber was said to have produced a weight of twenty pounds.

STIMULATING HENS TO LAY WHILE MOULTING.

According to a good authority in poultry-raising, it is considered inexpedient to encourage hens to lay while moulting. When new feathers are forming the ovary usually remains perfectly dormant, and in fact sometimes becomes greatly reduced in size. When, however, the feathers are renewed, if a hen be judiciously fed, and in good health, the production of eggs will soon recommence.

CATTELL'S METHOD OF PREPARING VEGETABLE FIBER.

A system of utilizing vegetable fibers that does not involve the practice of rotting, has lately been devised, by Dr. Cattell, and is said to be coming rapidly into use. The special superiority of the fiber prepared by this system is said to be that it possesses a greater degree of strength, estimated at 20 per cent. over the rotted article. The yield of fiber is also considerably greater from the same weight of material, while its divisibility can be carried to much more than the ordinary degree, and the whole labor accomplished in much shorter time.

PRESERVATION OF MILK IN RAILWAY TRANSPORTATION.

Among the precautions taken by an extensive milk company, near London, to insure the safe transportation of milk and cream by railway, that to which the most importance is attached consists in the cooling of it to the temperature of 50° to 59° Fahrenheit before filling the cans. Should the milk be placed in the cans at a higher temperature, as from 70° to 82°, the motion of the cars will cause the butter to separate as well as to produce a deposit of caseine, which change need not be apprehended when milk is at the lower temperature indicated. A further requirement is to have the vessels completed with the milk, and closely fastened. Sometimes a small proportion of bicarbonate of soda is added to the milk in hot weather, with important results in preventing it from turning sour.

A NEW MATERIAL FOR PAPER

A Scotchman named Hay was patented a process for making paper of oat-husks. He first immerses them in water, in order to remove any other seeds which may have become mixed with them, and which, if not removed, would injure the quality of the paper. The seeds rising to the surface, are drawn off by an overflow pipe at the top of the tank. The water is then drained off by a pipe at the bottom of the tank, and beneath a perforated false bottom, with a strainer which retains the husks. These are left to steep in the water five to ten hours, in order to loosen the silica from the fibre and facilitate the boiling. The other features of the process resemble those usually employed in making straw paper.

The author of "Gates Ajar" is going to marry a nice young clergyman, that's *her gait* now.

A COMIC CUP.—The *last* cup won at a drinking frolic, is the Hic-cup.

STOCK BREEDING.

RESPECTIVE INFLUENCE OF SIRE AND DAM ON THE PROGENY.

While all agree that both parents impress their respective characters on the progeny, much discussion has arisen with regard to the relative influence of the male and female on the young organism, and what parts and properties each most powerfully controlled. Whether the male wields the most potent influence, as the common practice of breeding from otherwise useless females might imply, may well be questioned. We have already seen that that parent, of either sex, which has the strongest constitution, enjoys the more vigorous health, and belongs to a breed whose characters are more permanently fixed, will exercise more influence over the progeny than the parent in which these characters are deficient or wanting. And the customary attention given to the selection of a sire usually secures these. But eliminate these and we shall see among our domestic animals, as we now see among the families of our friends, that the male parent must share pretty equally with the female one the credit of the family. The Arabs indeed, no mean judges if experience and success afford any criterion, esteem the qualities of the mare as much more important than those of the horse. Thoroughbred Arabian stallions are common but whoever persuaded an Arab to sell his favorite mare? If we can obtain tolerable animals by selecting one of the parents an animal of good quality and pedigree, how much better must they be if both are of this stamp.

As regards the parts whose formation is controlled by the different parents, the most generally received doctrine is that the male has the most potent influence on color, skin, hair, head, ears, neck and locomotive system generally; while the female tends to control the size, the internal organs and the constitution.

This idea seems to have been suggested to Buffon by the brown hair, short thin neck, quadruple udder, and long legs of his nine hybrids between the he-goat and ewe. Also to Flourens by the fur of his hybrids between the jackal and bitch. Richard Booth is said to have acted under this idea in producing his unsurpassed breed of Shorthorns. But Mr. Orton was the first to truly state the doctrine and defend it. He saw that the mule resembled the jackass his father, in his male external characters but approaches the mare in size, stamina and energy; conversely, that the hinny is externally like its father the horse, but in size, sluggishness and want of vigor more closely allied to the donkey; that the cross between the he mouflon and she-ass at the *Jardin des Plantes* had the external characters of the male parent mainly, and that the crosses between certain breeds of fowls present the same characters. The exceptions to the rule are neither few nor slight, yet results so frequently accord with it in the ordinary course of breeding, that we cannot, I think, afford to look on them as purely accidental. While withholding a full assent thus to the broad doctrines of Orton, I still think them sufficiently well founded to guard us against breeding from mare, cow or ewe, with an insufficient development, weakness or unhealthy taint affecting the internal organs; or from any male deficient in nervous energy and vigor, and above all, faulty or predisposed to disease in his locomotive organs. It does not follow that a female may be used with these latter failings, nor a male with the former. An animal of either sex is likely to transmit any fault it may possess, but failings of the nature I have indicated should be specially guarded against.

BREEDING OF MALES AS A SPECIALTY.

As we have seen, the male of a highly improved breed usually impresses the progeny in a higher ratio than the less improved female. The male too can more quickly cross a whole flock than the female, which can only yield two or three increase yearly. Hence the importance of raising males specially for breeding, and bringing them to the highest possible state of excellence. And wherever this plan is adopted we see the beneficial effect on the enhanced value of the progeny. Examples might be cited among thoroughbreds and trotters, Durhams, Jerseys, Ayrshire and Devons, but they are specially remarkable among sheep. The best Cotswold rams raised by Wells, Beale, Browne and others, on their native hills, and the finest Leicesters will readily let at auction for the season for £20 to £40 per head. And the successful bidder finds his profit in paying these high prices rather than in perpetuating inferior qualities in his flock. He reaps his reward, as any one who will examine his flock and his yearly balance sheet will not fail to see.

REGULATING THE SEXES OF OFFSPRING.

Could such breeders of males succeed in obtaining male and female stock at will, their specialty might be made more satisfactory and remunerative. It is often equally desirable to secure a majority of females in the offspring. No wonder then that men's minds have been, in all ages exercised with this question of regulating the sexes. Many rules have been laid down for this purpose, but the great majority are self-evidently absurd, while the remainder are but of very questionable value. I will mention a few of the most reasonable of these hypotheses:

1. The desire and idea of the parents at the time of conception determine the sex.

2. The nature of the food of the parents, and particularly of the mother during pregnancy.

3. The manner in which the spermatic artery is given off from the aorta.

4. The male germ is supplied by the right testicle or ovary, and the female from the left.

5. The full age and greater strength and vigor in one parent, will secure its sex in the majority of the offspring.

6. The germ impregnated just after the rupture of its ovarian vesicle will be a female, while that impregnated later in the lower part of the Fallopian tube will be a male.

7. The persistent selection of females, for breeding purposes, which yield one sex mainly, will finally obtain a race producing mainly males or mainly females.

Concerning the influence of the mother's wishes, we have some of us known instances of strong conviction and strong desire on the part of the mother, during pregnancy, being fulfilled and verified in the birth of a son or daughter. But how often is the opposite also the case?

Giron de Buzareingues alleges that more females are born when the mothers are well nourished and fed to repose than when worked and on spare diet. This question ought to be easily settled by some of our Shorthorn breeders, accustomed to the forcing system.

The supposed effect of the variable origin of the spermatic arteries and the alleged male and female characters of the right and left testicles are noworthy of serious remark. Even the authority of the father of medicine, and his curious instructions for binding up the right or left testicle according to the sex desired, will not overrule the fact that males and females with single testicles and ovaries are capable of producing both sexes.

Leroy, Giron and Colin agree that the more fully developed and vigorous the male as compared with the female, the more males will appear in the offspring; and conversely, that a strong female served by a weak male will have more female offspring. This they observe on dogs, but much more conclusively on sheep. The full-grown, strong and vigorous ewes with a young or weakly ram, brought forth a majority of females, and the union of a full-grown robust ram, and old, weak or diseased ewes, yielded a preponderance of males. Hofacker says he has noticed the same thing in the human subject, and Saddler's "English Peerage" appears confirmatory of the theory. Burdach has observed a greater proportion of male progeny than females, from the most prolific women, but whether from weakness caused by child-bearing, may be open to question. Presuming the theory to have some basis in truth, it may serve to explain a predominance of female offspring among domesticated gregarious animals, as the females are better fed and have less exertion than their wild compeers, and the male may be presumed to be, in many cases, weakened during the breeding season, by excessive use.

Lately, Professor Thury, of Geneva, upholds the doctrine that the ovum impregnated at an early and comparatively undeveloped stage becomes a female, whereas if more fully developed before impregnation, the product is a male. Huber's observation, that the queen bee lays first female eggs, then males, and lastly again females, he explains by the theory, the first eggs are not fully developed when laid and impregnated, that the second lot laid later have had more time to undergo full development; while the last laid are but partially developed on account of the comparatively exhausted condition of the oviduct. Under his instructions, George Cornax, an intelligent agriculturist in Vaud, applied the principle to breeding cattle. He had twenty-two Swiss cows served by a Durham bull on the first signs of heat, and all brought forth heifers. He had six Swiss cows served in the last stages of heat, by the same bull, with the view of raising work oxen, and all produced bull-calves. He had an imported Durham cow served, the first day of heat, to obtain a pure successor to his valuable Durham bull, and his wishes were crowned with success. This looks like solid ground; but alas! subsequent experiments made by Coste and others, on cattle, rabbits, birds, frogs and fishes, have given uncertain and contradictory results. Is is difficult to set aside altogether the results obtained by Cornax, and, on the whole, there is probably some truth at the foundation of the theory, but even if so, it must be granted that modifying circumstances will often, if not usually, set aside the rule.

And lastly, the proposal to *breed in* and perpetuate the tendency to produce young of one sex only, though exceedingly plausible in what it offers, will probably prove still more worthless. I am not aware that the attempt has been made to perpetuate such a power in the lower animals, but my own observations on human families are altogether unfavorable to its success. One family of six daughters, all married and all prolific, had each about an equal number of sons and daughters; and another family of seven daughters and one son, have so far had families equally well balanced as regards the sexes.

NEW WEAPON OF DEATH.

We have the catalogue of description and illustrations of the Parker breech-loading double barrel *shot gun*. As this weapon is not for the "Battle field" we need only say to the little Birds: look out "Birdies, Parker is coming"—by the description a *great* gun.

The *Technologist* says:—"One cord of wood, cut and split fine, and corded up beneath a shelter, while it is yet green, will furnish more heat after it has become seasoned than two cords of the same kind of wood which has been continually exposed to the alternate influences of storms and sunshines."

There is a machine in Rochester, N. Y., which operated by steam and fed by one girl, will put nine thousand covers on books in a day. It was invented by W. H. Clague and R. B. Randall of Rochester.

A certain country editor thus courageously dashes the hops of those patrons who believe that they could control his course by any threat of withdrawal of patronage:

"We do not belong to our patrons,
Our paper is wholly our own;
Whoever may like it may take it,
Who don't may just let it alone."

NIL DESPERANDUM.

Have faith, Farmers, the "Latter Rains" will come as promised.

CHEAP INSURANCE

AND ITS CONSEQUENCES.

[*From the Chicago Evening Post, Feb.* 15, 1870.]

A few days ago *The Post* made some remarks on the dangers threatening the insurance interests of the country—urging the public, as a matter of self-interest, not to let the idea of *cheap* insurance be the only one in view, but to endeavor to bestow it in such a manner as will support the reliable companies of the country. The public have for some years had the idea that insurance, like other patronage should be bestowed where it will involve the least outlay—and agents, bidding for patronage, have advertised to write policies *cheaper* than others. Of course, irresponsible companies could afford to write policies at much cheaper rates than sound companies, because they do not and have not given absolute indemnity. If they have paid *loss*, it has been because of the accidents circumstance that, at the time, it seemed to the managers to be to *their* interest to pay; and the other accident, that the company had funds with which to pay. Companies started without capital, trusting to some accidental incident of business to earn a capital, and feeling that if such could not be done, its managers could at least get their hands on sufficient money to compensate them for the wear and tear of conscience and loss of time—companies organized and conducted on this basis, having everything to gain and nothing to lose, could, of course, afford to take risks at whatever rates were offered—while sound companies, with *bona fide* capital, could not compete without almost certain loss. The public, searching after what was *cheap*, and never considering that an insurance *cheap*, at the time of its execution, may be *cheaper yet* in case of a loss by fire, have given these irresponsible companies an encouragement so strong as to compel the sound companies to come down to their rates. As a result, the capital of many of the most responsible companies has been very materially reduced, and they have been placed in a condition where a year or two more of competition, under the cheap "cut" rates of irresponsible companies, will wind up—so says Superintendent Miller, of the New York Insurance Department—half the responsible companies in this country. And we are hastening to a day, if the delusion of cheap insurance is not exposed, when, no matter what rates a merchant may pay, he cannot find enough insurance companies in the country whose policies he knows will be paid, to cover a moderate stock of goods. Such a state of affairs, it is hoped, will never prevail, but can only be averted by struggling these "Cheap Johns" in insurance and patronizing companies known to be sound, at rates known to be safe and reasonable to the companies, regardless of the terms offered by the Peter Funks.

Since the remarks made by *The Post*, the other day we have received a copy of the Hartford *Post*, February 5th, which contains an article on the same subject, with statistics showing the disastrous effects of the competition with the cheap rates on the sound companies of the country. The article contains so many valuable facts, that we translate it to our columns entire. It is as follows:

"Though it has often been repeated, that the year 1870 was a most disastrous one for the Fire Insurance Companies, we think the following figures will surprise all. Those who complain of exhorbitant rates, and clamor for a reduction would do well to read and ponder. We believe it to be for the public interest, and cheaper for them in the end, to assist and sustain our best companies in the maintenance of fair rates—and not to nurse into a brief, life weak and unreliable companies, for a small saving in premium. When our wealthiest merchants, largely interested, and even directors in insurance companies, remove their business from our oldest and best companies, for a petty difference in premium of one dollar on a $5,000 policy, we must believe that for such failures as the "Home," the insuring public themselves are more or less responsible, for in too many cases they act without knowledge of the actual condition of companies, but take for gospel whatever an agent tells them, who offers to insure at a low rate, looking more to low rates than companies' high standing. As a consequence a large majority of insurance companies have been, and still are, selling their wares below cost. Is this true policy for the assured? Superintendent Miller, of the New York Insurance Department, is reported as having said, that a year or two more would wind up one-half the companies in the country. These figures, at least, furnish good foundation for such a prediction.

"From the advance copy of the *Spectator's* chart, compiled from the official returns, showing the standing of all the companies doing business in the State of New York, we find on comparing the net surpluses with the returns one year ago, that out of 141 companies, 68 show a loss amounting in the aggregate to the enormous sum of $2,585,000, some of which is, of course, attributable to shrinkage in assets.

All the foregoing applies equally to California, and it is very necessary that parties seeking actual protection by Insurance should look well to the character and ability of Companies. The *best* is always the *cheapest*.

"*The following table shows the loss in the net surplus as compared with last year, of some of the leading New York Companies:*

Ætna	$45,000
Buffalo Fire & Marine	33,000
Commerce, Albany	11,000
Fulton	12,000
Home, of New York	74,000
Market	74,000
North America	42,000
Washington	28,000
Astor	10,000
Capital City	15,000
Continental	11,000
G	30,000
Irving	43,000
Merchants'	47,000
Republic	42,000
Western, Buffalo	18,000
Atlantic	41,000
Columbia	16,000
Corn Exchange	7,000
Hanover	46,000
Lamar	22,000
Niagara	52,000
Security	300,000
Yonkers	56,000

"*The following table shows the falling off of some of the Foreign Companies doing business in New York.*

American, Philadelphia	$174,000
Detroit Fire & Marine	3,000
Franklin, Philadelphia	65,000
Independent, Boston	55,000
Manufacturers'	67,000
Norwich	43,000
Boston, Boston	60,000
Eliot, Boston	10,000
Girard, Philadelphia	80,000
People's Worcester	17,000
Lancaster, Pa.	22,000
Merchant's Providence	33,000
Narragansett, Providence	36,000
Cleveland	7,000
Equitable, Providence	8,000
Hide & Leather, Boston	85,000
Providence, Washington	17,000
Rodger Williams	6,000
Springfield	6,000
Sun Cleveland	42,000

"*The following table gives a list of the agency companies showing a gain in net surplus of over $20,000:*

Lorillard	$47,000
Phœnix	61,000
Merchants', Chicago	33,000
North American, Philadelphia	132,000
Manhattan	30,000
National, Boston	30,000
Pacific, San Francisco	35,000

which list is lamentably small.

"*The following shows the losses in surplus of the Hartford companies:*

Ætna	$40,000
Charter Oak	16,000
North American	27,000
City	13,000
Phœnix	75,000

"*Companies showing a gain:*

Hartford	
Merchants'	$110,000
Connecticut	7,000

"This out of 141 companies only eleven companies have shown a gain to surplus."

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. This description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or working, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 22 2-10 per cent. For life-sustaining properties to all stock exposed to sudden change of weather or over-driving, they are equal

For MILCH COWS particularly valuable, increasing the quantity of milk and preserving its quality to a far greater extent than any food known. A suitable quantity for the cow at the commencement is one quart in the morning and the same quantity at night, either alone or mixed with any other food, generally mixed with the mash of bran, slops, roots, or other food of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine motion or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($42 per ton,) it is the cheapest feed in market. It is now selling in New York at $40 per ton, and at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those of us on the coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

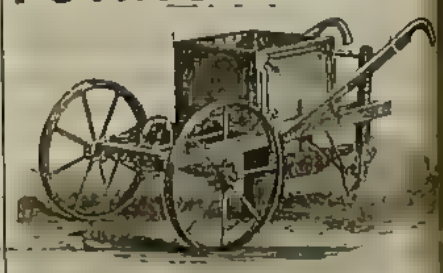
TRUE'S IMPROVED POTATO PLANTER



This is, unquestionably, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such slices as the farmer may prefer, drops them pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed.

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse, plant six acres of potatoes in a day, is of inestimable value, because the days in which PLANTING can properly be done are very few, while he has all summer and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "In the very nick of time," and gives leisure to its owner for attention to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

WARREN & CO.,

POMOLOGY AND FLORICULTURE.

A SUPPOSED HYBRID PEAR.

The ninth volume of M. Decaisne's excellent work, the "*Jardin Fruitier du Museum*," contains the completion of the account of the more important Pears in cultivation, of which M. Decaisne describes and figures no less than 317 varieties. To make the history of the genus as complete as possible, M. Decaisne now adds, in the 104th part of his magnigcent publication, an account of certain species of varieties growing wild, or apparently so, in different countries, and which have been regarded as distinct species by various authors. Great interest attaches to these trees, inasmuch as they, or some of them, are the parents of our domestic varieties. Among the trees so mentioned is the Polwiller Pear (Pyrus Polvilleriana), a hybrid form, thought by Bauhin to be intermediate between the Apple and the Pear. The Polwiller Pear, says M Decaisne, affords a remarkable illustration of the persistence of character in a hybrid tree, perpetuated for three centuries by grafting, and which affords strong evidence against the opinions of those who maintain that our old varieties of fruit trees degenerate and disappear. The only plants of the Polwiller Pear known are there derived originally from the hybrid form described by Bauhin. In 1860, out of 150 fruits collected in the garden of the museum, M. Decaisne found only 13 seeds well formed, and these seeds, when sown, produced four very different forms In 1864, 139 of these small Pears furnished 62 seeds; in 1867, 50 seeds which were obtained from the Jardin des Plantes of Dijon all proved sterile. Lastly, in 1865—a very hot and dry summer—it was found necessary to cut open 356 fruits in the Museum garden in order to obtain a single well-formed seed. Among the four forms derived from the seed of the Polwiller Pear, three were remarkable for the small size of their leaves, while their pubescence was like that of the parent tree, on that of Crataegus Aria. The seedlings belonging to the fourth form seemed to M. Decaisne to belong entirely to the category of cultivated Pears, but were not referable to P communis, the leaves of which are roundish. On the other hand, the bark of old trees of P. Polvilleriana remains smooth and greyish, like that of Crataegus Aria, instead of cracking and becoming blackish like those of the Pear.

DARLINGTONIA CALIFORNICA.

Mr. Worthington G. Smith calls attention in "Nature" to certain living plants of *Darlingtonia Californica*, or the American pitcher plant, described many years ago in the Smithsonian Contributions, by Dr Torrey, from specimens brought by General Frémont from what is now Nevada. According to Mr. Smith, the plant possesses an irresistible attraction to insects the nature of which is entirely unaccountable. When in bloom the flower is said to resemble the upraised head and body of the cobra, with mouth expanded, and prepared for a spring, the head being at right angles with the hollow, vertical body, and apparently presenting no opening by which an insect can enter. Blue-bottle or blow flies are said to make their way immediately to this plant whenever they come into a room where it is growing, and alighting on a portion of the flower, they fly upward into the previously unseen entrance to the tube, and from this they descend the hollow body, and apparently never return alive, keeping up a buzzing noise for have an hour and then dying. This cavity of the plant soon becomes entirely filled with dead flies, so that, as a consequence, the walls decay and the insects drop out.

USES OF THE "WATER-PEST" PLANT.

Much alarm has been caused in Europe by the spread of a certain plant, living in running water, called the water pest, (*Elodea canadensis*,) and said to have been introduced from America. By its very rapid growth it speedily chokes up the channel-ways, thus impeding the flow of water in mill-races, and interfering also with fishing. A recent German writer, however, finds consolation in the fact, which he thinks he has ascertained, that this "water-pest" exercises a very important function in purifying the water, and that if planted in streams which form the drainage of sewers, it will take up entirely and destroy any disagreeable smell, as also the noxious properties of ordinary sewerage. The composition of its ashes is said to be extremly complicated, and the plant itself is recommended as furnishing a manure of the greatest value. It has also been tried with success in paper-making.

WATERING PLANTS WITH HOT WATER.

It has lately been shown, by careful experiment, that sickly potted plants, even some that have almost died out, can be greatly benefited, and sometimes, indeed, entirely restored to vigor, by applying warm water to them instead of cold. In certain cases, oleanders which had never bloomed, or did so only imperfectly, after being treated with luke-warm water, increasing the temperature gradually from 140° up, to 170° F., produced the most magnificent luxuriance of bloom. Similiar results occured with an old plant of Hoya; and also with an India-rubber tree which had nearly withered away. In all these cases the application of water heated to about 110° F., without any other precaution, caused a new and flourishing growth.

BLIGHT AND INSECT COMPOSITION.

BY MR. J. M. MATTISON, JACKSONVILLE, TOMPKINS, COUNTY, N. Y.

Some of our townsmen, with myself, paid $50 for a blight composition, but I do not think it is equal to the following. My mode is:

25 ozs. of Salt, fine or coarse.
5 ozs. of Copperas.
3 ozs. of Blue Vitriol.
1½ ozs. of Saltpetre.
1, or 1½ ozs. of Oil of Vitriol.
1 lb. of Babbitt's concentrated Lye.
6 lbs. of hard soap, or 1 gal. soft soap.

Take an old iron pot, and put in the salt, with a sufficient quantity of water, then heat. Pound up the Blue Vitriol, then the balance of the compound; if too hard, put in lard or harness oil until it is thin enough to brush on. Clean the roots of the tree, and cut out the borer; have a small brush something like a marking brush, and cover the wound. Then take the body and limbs. On the largest parts of the body and limbs I use a very small whitewash brush 4 to 5 inches wide, and not very thick. This will make the varnish regular, and kill every insect. To every man that owns an orchard, it is invaluable. I have some 3000 pears and 1000 to 2000 apples, plums and peaches. I intend to hire a man in the spring, and let him go all over my orchard.

The oleander—so popular as a house and garden plant—is said to be extremely poisonous. A child, in Ohio, who ate some fragments clipped from an oleander bush was recently poisoned, the symptoms being sudden and violent, and the result almost fatal.

NEW ZEALAND FAX.

SEED OF THIS WONDERFUL FIBRE CAN CAN NOW BE HAD FOR PLANTING IN CALIFORNIA.

New Zealand Flax is now in Bloom for the first time in California, and the fibre dressed, the Bark and Cloth made from it can all be seen at the office of the CALIFORNIA FARMER. No product can be made of more profit or of more importance to o ate than this

New Zealand Flax.

NEW

AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY cuts in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

ORANGE, LEMON AND LIME TREES.

Those who desire to make Plantations of this most desirable Fruit, can now be supplied with the very choicest varieties of trees from one foot to four feet high.

Samples of these Trees can be seen by calling at the FARMER OFFICE, or any information can be had on application by Letter addressed

EDITOR FARMER.

THOSE WHO WISH TO RAISE TREES FOR A *ORANGE PLANTATION*, Can obtain SUPERIOR SEED at the FARMER OFFICE,

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles or merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that those who send orders shou be as explicit as possible as to their wants—describing as minutely as they can, and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should include satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

We particularly call attention to the

New Agricultural Implements

which we announce in our columns several of which we have the exclusive sale for this Coast.

THE POTATOE PLANTER,
JEBB'S PATENT CHURN,
CHEESE CURD CUTTER
PATENT WEEDING HOE,
LIFTING HAY FORK,

WITH OTHER VALUABLE IMPLEMENTS.

Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

TREE SEEDS

OF ALL THE VALUABLE KINDS.

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

OUR NEW YORK AGENCY.

Geo. P. Rowell, & Co., 40 Park Row, New York

AND

S. M. Pettengill & Co., New York

Are the Sole Agents for the CALIFORNIA FARMER in that city. They are authorized to contract for our Journal for the Advertising and make Collections for us same at the very lowest rates.

Our many Patrons in that city and State are requested to call on them, give their business to them and subscribe for our Journal which will always be found on file at their READING ROOMS.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* of our *Journal*, to which we would direct their *special* attention.]

Our Home Department offers an important chapter for *Mothers*.

The Agricultural Department asks of our Stock Raisers their careful attention to the article on *Stock Breeding*, which we take from the Reports of the Massachusetts Board of Agriculture. Here are important truths

The new plants, under the Horticultural head, include our "California Pitcher Plant," as reported on the 147th page.

We have received too late to notice, several books, magazines and pamphlets, of which we shall report duly.

We are indebted to Hon. Horace Capron for valuable Reports from Department of Agriculture.

We return thanks to E. E. Elliot, Esq., Chief Clerk in Bureau of Statistics, at Washington, for valuable reports.

RELIGIOUS PUBLICATIONS.

We have copies of the Missionary *Herald*, published at Boston in the cause of "Foreign Missions." A publication and a cause that has done much to evangelize and bless mankind.

OUR CHURCHWORK.

A publication in the cause of the Episcopal Church and the spread of that cause. Copies with interesting reports kindly sent us.

THE TECHNOLOGIST.

This most valuable publication comes to us, (the May number) full of valuable matter and fine illustrations of new inventions, among them Thompson's Road Steamer, Crampton's Coal Dust Furnace, Eason's Steamometer, and other valuable inventions, and with a new and beautiful design for a Garden Summer House. The publication is highly creditable to the publishers.

We have received the Poultry Breeder's and Fancier's Directory for 1871, published by S. E. Gleston, New Haven, Conn., being a complete list of all the breeders of note in the Union, save California, opportunities not yet had to procure from our State before its issue. The work is of particular interest to raisers of Poultry and fanciers generally. Copies will be had at FARMER office next month.

LAID OVER.

A valuable lengthy Letter from S. W. Jewett, is necessarily deferred till our next.

Places for Summer Travellers, will appear in our next.

The Artists' Gallery next week.

Several Letters of Inquiry, received late, will all have attention next number.

NEW STOCK ILLUSTRATIONS.

We have some superb Illustrations of Horses and Cattle, which will appear next and the following weeks.

FROST IN SPOTS.

A severe frost has been experienced in several places in the last few weeks—like sly "Reynard," Jack Frost slipped into the gardens and *nipped things*.

THE CROPS—SEASONS—RESOURCES.

Again we are to speak of the crops, seasons, etc., and again we shall but reiterate what we have all along been saying—our crops will be good in the aggregate, and enough for all the wants of our State and plenty to spare.

Whatever speculators may say, Whatever croakers may say, Whatever slipshod and shallow workers may say, *we believe* in a good general crop for California, even *beyond* what even sanguine persons may say.

We know many persons have lost crops, some largely and heavily, but no loss without a cause. We need not repeat what that cause is, for the farmers themselves will tell it, and their bitter and costly experience will remedy the evil in years to come, and our State will advance more rapidly for any loss this year.

We have visited the grain fields—many. We have heard from reliable sources, and we know there are places, large sections of country, where the crops are *better* and heavier than ever known before, and we have no doubt that when the "Report of the Crop of Grain for 1871," shall be made, it will be found that in addition to the full supply of the State for all its own wants for food and seed, California will then have ONE HUNDRED THOUSAND TONS TO SPARE, That is only 200,000,000 pounds, or TWO MILLIONS CENTALS, or ONE HUNDRED CLIPPER SHIP LOADS, giving to each ship ONE THOUSAND TONS.

Does this look like a failure of crops? We have great faith in California and that her future in AGRICULTURAL development will be great.

CALIFORNIA MUST SUCCEED.

California is a NEW COUNTRY, a NEW WORLD, when compared with other sections of it, and the most intelligent people of all other countries feel such an interest in California that they *want California to succeed*.

It is an indisputable fact, that California has *made her mark* in the progress of the world.

California stands alone in her peculiar characteristic of development, as a State.

There is something strange and wonderful in the history of her progress; her course has been totally different from any other State in our Union. "Her hills and mountains are full of Gold and Silver;" there are "Cattle upon a thousand hills," and her "Land is flowing with Milk and Honey;" there is no spot of earth where the prophecies of Holy Writ would seem to point out as the "Promised Land" for "God's Chosen People" more than California, and the "Pioneers" that came to "spy out the land" are like in many cases to those very people that Moses led from Egyptian bondage. For Californians came from a land, even the "Land of the Pilgrims," where old customs and habits, old creeds and isms bound the soul in worse than Egyptian bondage, and these very people that came to this "Promised Land" fell into the same snares and sins that the children of Israel were tempted with.

The first great evil that befel the Israelites, it will be remembered, occurred while their leader was up on Mount Sanai, and when he came down, bearing the "Tables of the Law" that was to guide them, he found them bowing down to the "Golden Calf." And this is the great sin of all on the Pacific coast—they are *worshipping the Golden Calf*—for the pursuit of wealth absorbs every feeling; and yet with riches they revel also "among the flesh pots of Egypt"—even though the "Manna" falls from the trees; and here, too, the "Quails rain down," and even if we do dwell in a "Land of perpetual Fruits," and "new Wine gushes out from the press," and although it be indeed a very "Land of Plenty" and "Our lines are fallen in pleasant places," and "God has given us a goodly heritage," yet for all this the *Heart of Man* fails to remember only the "Giver of all Good," and for this very reason, there are but few that will be permitted to enter in and enjoy the "Promised Land."

There is no spot of earth on the civilized Globe where so many and continued blessings are offered of "Goodly Seasons," "Healthful Climate," "Rich Soil," "Abundant Harvests," and every Blessing to *gratify* and *satisfy* the wants of Humanity as are found in California, when these blessings are rightly used and rightly appreciated and enjoyed, and where the Heart of Man is duly sensible "From whence these Blessings flow.

Life is granted to man not only for his own enjoyment and the pursuit of selfish purposes, but that according to his possessions and means of doing good he finds Happiness in doing good to others—that he "*does not live* for himself alone."

We have been speaking of the "Seasons," the "Crops," our "Resources," and it would almost seem when we hear men talk of *lost crops, drouth* and *disappointed hopes*, as if "Life," "Hope" and "Heaven" were gone also. *We* have a very different "stand point," for we do not believe these losses come without a *cause*, and that cause is not a *fault of nature*. Nature's laws are perfect, and when the "tiller of the soil" will give more time to the *study of these laws*, the cause of his *lost crops* will be made plain to him that it was not nature's fault but his own.

We close by simply saying we *see the silver lining* of the cloud that has long been over our Farmer's prospects by want of a proper study of their profession, for now, all over the State, the Press everywhere reiterates *this truth*, the "loss of crops this year" is mainly to be attributed to a wrong system of cultivation and time of planting. This is our belief, and what this journal has said and said again and again for years.

Our climate, our soil, our seasons, are all right, and when the farmers *all* work *right*, complaints will cease, and gratitude to God for Blessings will be heard instead of murmurings.

A RARE BOOK

Our State Library has recently come into possession of a very rare volume on "Oriental Scenery." It was originally published in 1795, and there are but a few copies of the work in the United States.

CULTIVATION VERSUS IRRIGATION.

There can be no question of the value of both of these means to be used by our Farmers in order to promote the growth of crops and to guard against the changes of the seasons, but the whole secret of their use and utility lies in the *knowledge* of *how*, *when*, and *where* to use them.

There is at the present time, owing to the extended discussions going on over the State, relative to the effects of the drouth, quite an anxiety to start various enterprises in order to introduce water canals, irrigating ditches, &c., on those sections where the drouth has most seriously cut off the crops. These discussions about remedial measures against drouth, these examinations of lands for such experiments, and the meetings of Farmers and Capitalists who are planning such operations, will result in some good whether such enterprises are carried on or not, for it will reveal and bring into sale large tracts of land that otherwise would remain idle, and as it will lead to the sale of large tracts of land, much of it ostensibly as a speculation, this very change of owners will bring the lands into market, and if the *speculation fails* the land will soon come into cultivation, and thence good will come to the public.

In all the great plans for the overflowing and irrigation of large tracts of land in those sections where they are now agitated, and of which we speak in other portions of our Journal, as reported by the press in those sections, it is all important that SCIENTIFIC KNOWLEDGE based upon the LAWS OF NATURE should be the guide of those who are now engaged and deeply interested in forwarding these plans.

One thing is very certain, the mere purchasing immense tracts of lands on speculation that nature designs for the growing the *Vine* or other *Fruits*, or crops that prosper only in a dry and warm soil that can be made sufficiently moist by a good and wise CULTIVATION so as to secure rich saccharine juices to these fruits which make them more valuable, to take such lands and flood them so as to permit Wheat, Barley, Oats, &c., to grow, is only a *perversion of the Laws of Nature*, and in the end will result in a most disastrous failure without a due and careful study of the *Soil* to be overflowed, the *Season* to overflow and the *Time* the water should remain upon the soil, the laws of nature must be obeyed.

"Nature is her own interpreter,
And she will make it plain."

The *banks of our rivers* are *overflowed*, and this is done in the *Spring time* before the sun reaches the meridian heat, and sometimes our Valleys and Plains are flooded by the rise of rivers and showers and excessive rains, and this is done in the *season of rains*, and this is nature, and when this water is *poured over the surface of the soil* the sun is generally obscured by clouds or the rays of the sun are not hot enough to injure those products that are flooded.

Let those who talk of flooding lands, or of irrigating them *on the surface* during hot weather see the effects upon trees or on vegetables that has been covered by water one, two, or three weeks as was always seen on the banks of the Sacramento and elsewhere during flood time, there, trees, grass, and vegetation turned pale and sickly, and perished, and this must always be the case where *surface* irrigation is carried on excessively as we have often seen.

There are many instances of it at the present time, among those who grow Strawberries and small fruit in their orchards, they flood their land for the *small fruit*, and kill the trees that bear *large fruit*, while even the small fruit is brought to market often half white and sour, devoid of those rich juices that make up the goodness and nutrition that makes them wholesome.

In other columns we note the plans of whole sale Irrigation and shall speak again hereafter.

CULTIVATION.

Every earnest and careful cultivator must certainly know that *deep and constant cultivation produces moisture*. Every Farmer can prove this for himself among his orchard trees or in his vineyard, cultivation of small fruit and of Corn or Potatoes, and of all kind of Vegetables can prove in the most perfect manner the benefit of *Cultivation over Irrigation* in a climate like ours, and in our hottest and dryest Summers too.

We base our arguments; be it understood, upon such lands as are properly plowed to start with, and upon all such soil its cultivation can can be kept up all summer to great advantage, and any Cultivator can take such soil, plow it in the very hottest and dryest weather of the summer, be it a Cornfield, Potato patch, Peas, Beans, or Beets, and although the soil may be hot and dry as ashes when plowed, look on the crop the next morning and a heavy dew will rest upon it, giving a great refreshing, and the entire soil will seem to have been changed to one of a different kind; this continued and it is far better for the crops than surface watering, the first keeps the soil open and fine, the other bakes the soil like a brick, those who have never tried this had better begin.

MULCHING.

When the soil of a Garden or Orchard is well cultivated one of the best means of retaining the *moisture to the soil* and giving it to the plants and trees is by mulching them.

We are much surprised that when great good is so easy to be accomplished, and when a crop can be so easily enlarged and improved at so little cost, that the plan of mulching is not more universal in our dry climate, Orchard trees, Vineyards, Blackberries, Raspberries and Strawberries Plantations could be very greatly benefitted by a regular system of mulching, as almost every grower has ample means at hand of various materials that is constantly going to waste that could answer the double purpose of mulching and also manuring the soil.

For the Orchard trees, old straw and bottom of hay and grain stacks partially rotted, or strawy manure covering the surface of the ground to the diameter of the branches thus protects the surface or feeding roots.

For our Vineyards, all the branches of summer prunings and similar material as the Orchards—the same for Blackberries and Raspberries.

For the Strawberry, clean Oat Hay or Barley and other straw, thus keeping the fruit clean and free from grit, which would secure for such fruit a higher price, as fruit *thus ripened* on straw would always have a darker color, more of the saccharine juices and thus pay for the care given to a good cultivation. The growers of all our small fruit, who now contracts with Chinese labor, could easily convince these laborers they would make more money by such a course and this work would be promptly done.

While we approve of every and all plans for the introduction of water for a judicious overflow of lands at the right time and on the right soil, we must adhere to the constant doctrines of the CALIFORNIA FARMER that CULTIVATION IS BETTER THAN IRRIGATION, though they may be Twin Sisters.

THE MANURE SHOWS ITSELF.

Now is a good time to test the question of the value of manures to the soil, as many Farmers say the "Land is rich enough," or we cannot manure our soil. "It would cost too much," and "It will not pay."

Let any person who travels, look among the grain fields of our State, and particularly where the crops are the poorest, and they will note particular spots, often large places in a field where the grain is green and fresh and twice the hight of other parts of the field. These spots are where the grain was threshed the preceding year, here for a number of days ten or a dozen horses or mules were at work threshing the crop, here their droppings became mixed with the soil, and here too the refuse straw was burned, leaving a large deposit of ashes, this with the manure dropped was plowed in and thus this now green spot was in some degree enriched and the result is shown in the appearance of the crops now.

Again, to the changing of fields an old wagon road is taken into the field and plowed up—a road that for years had received the droppings of the teams passing over it, here, too, can be seen now through the grainfields a rich path of green rich grain, while all the rest of the field is a failure.

There are also fields where ditches have been dug and the deep soil thrown up, and on these ridges the grain will be rich and luxuriant, giving a heavy yield. This is from the deep virgin soil such as sub-soiling and deep plowing would always give soil that has not been worn out—and the seed grain revels in it and grows and thrives. Will our Farmers note these things?

NOT TOO LATE TO PLANT

CORN, BEETS, AND MELONS!

On a large amount of land upon which crops have made a partial failure and from which a *Hay Crop* will be harvested, if a little extra exertion and labor be given, a good return may yet be had from the land, and a good portion of the loss may be made up by an extra crop.

After the Hay crop has been gathered, if a strong team is put to work and the stubble turned under before it is dried, it will soon decompose, but before plowing let there be 400 to 800 or even 1000 pounds of Gypsum spread over the land, and this with the green stubble plowed in deeply, then have the land well and firmly harrowed and in two weeks the soil could be planted with *Corn*, *Sugar Beets*, *Melons*, *Beans* or *Cucumbers* and each and all these crops will pay well but care and attention is but given to doing the work well.

Sweet Corn, well grown, always pays, Sugar Beet pays as feed for stock, Melons sell always, Cucumbers pay for the *Pickle Factories*, Beans are ready sale even dry for export.

We would be understood in this matter now, we do not mean that a crop can be had from any and all the lands that have failed as grain land from most of it is only half cultivated and generally overworked, exhausted soil, but we mean those portions where there is some character or strength, or life yet remaining, such lands could be worked now and with good results, but of course more labor and greater care and attention, and with these, a portion of the first loss could be restored.

STATE AGRICULTURAL SOCIETY'S PREMIUMS AND FAIR.

We have received the pamphlet of the State Agricultural Society, containing the full "List of Premiums for 1871;" also the Rules, Regulations, &c., for this Fair—THE EIGHTEENTH ANNUAL FAIR—which takes place in September, commencing on the 18th, and continuing six days.

The Premium List is more extensive in variety, the premiums better arranged and more liberal than heretofore, being more directly applicable to the real interests of the Industrials than any former year.

We notice that in this pamphlet there is no mention of the RACES, as to be connected with this Annual Fair, although it is to be supposed there will be, as usual, a season of Races, it would be a most creditable event if the State Society could dispense with the Races, as heretofore conducted, and let the Races take place at some other time, and thus give all the time of the Fair to the legitimate business of the Industrials, the Products and their examination, as we believe the grand results would be highly beneficial to the Society the Contributors and State.

LABOR.

It is to labor, and labor only, that man owes every thing possessed of an exchangable value Labor is the talisman that has raised him from the condition of the savage; that has changed the desert and forest into cultivated fields; that has covered the earth with cities, and ocean with ships; that has given us plenty, comfort, and elegance instead of want misery, and barbarism.

OLE BULL.

HAS THE VIOLIN A SOUL?

It is reported that "Ole Bull" is now engaged at Cincinnati in finishing up his new and wonderful piano, which promises to be a most valuable invention.

"Ole Bull" is also engaged in preparing a book to be entitled "The Soul of the Violin."

It is very certain that if the "Violin" ever had a soul, "Ole Bull" would find it, for he seems to hold a communion with it, and it gives to *his touch* sounds such as no other human being could draw from it.

It will be remembered that "Ole Bull" was recently married at Christiana, his Norwegian home, about a year since, and the latest news we have is stated above, save that his latest "good fortune" is a daughter has been born to him, and *this* we suppose is the "Soul of the Violin," as it is the Soul of this GREAT VIOLIN MASTER.

JOHN B. GOUGH.

This distinguished and eloquent advocate of the Temperance cause is now in our city, and will give to our citizens evidence of his great ability, for he is, indeed, a very eloquent speaker, one that will charm and hold a large audience two or three hours without fatigue.

Mr. Gough has changed since we saw him in early years—some twenty-three years ago—and when we listened to his eloquence on Tuesday, in the lecture on "Peculiar People," although *years* has silvered his head, age has not quenched the *fire* in his heart; *that* burns brightly, warmly and earnestly as ever for the cause of the poor and unfortunate in the world.

That lecture was truly admirable, there was variety, yet the various pictures were true. We shall not attempt now to give a critical notice, we could not do him justice. *He must be heard*, seen and heard, to be fully appreciated.

Mr. Gough speaks again this evening, on "London" and *its* varieties, and again on Saturday, on TEMPERANCE, his SPECIAL FIELD OF LABOR.

These lectures are held in the Pavilion, at which some fifteen hundred, we think, were present at the first lecture, and the Pavilion will be full as long as Mr. Gough will labor.

Mr. Gough will find here warm hearts, ready workers and a host of friends. He may feel assured that to this "Land of Gold" he will be made ever WELCOME.

WHAT WILL BECOME OF FRANCE?

When the white-winged messenger of Peace spread its wings and hovered over that beleaguered and blood-stained nation, when the army of King William took up their line of march for their own homes and Peace was declared, millions of hearts over the world sent up to Heaven their Thanksgiving and Praise that bloodshed had ceased, and Peace jubilees were held all over the world.

But while the Christian and philanthropist were rejoicing, the blood-thirsty and wily schemers cried out more blood, more sacrifice, and as the one cried Peace! Peace! they cried, "There is no Peace;" and worse than war, the civil strife began, until now, the clouds gather the blackness of darkness, and there hardly seems a ray of light to peer through the horrifying scenes of blood and carnage, and we see no hope of Peace or of saving the once proud and beautiful city of Paris, without that fearful result, a return to a Monarchy, and it surely seems verging to that last result, and it would not be at all strange. We think it more than probable that ever the eventful days of July 15th, the anniversary of Napoleon's "Declaration of War," Napoleon himself should be seated in power again, for he is indeed the only "master spirit" that can rule this nation, and as the past is reviewed, *this truth must be admitted*, that Napoleon has done more to advance all the great Industrial interests of France than any ruler that was ever in power in that kingdom.

Better that Peace shall come, and Civil War and bloodshed cease, and Napoleon reign again, than this desolation go on, for France is not yet ready to be a Republic, for the people cannot *rule themselves*.

FAMILY GENEALOGY.

A gentleman relates the following curious family experience: I got acquainted with a young widow who lived with her step-daughter in the same house; I married the widow; my father married the step-daughter of my wife; my wife became the mother-in-law and also the daughter-in-law of my own father; my wife's daughter is my step-mother; and I am the step-father of my mother-in-law; my step-mother, who is the step daughter of my wife, has a boy; he is naturally my step-brother, but because he is the son of my wife's step-daughter, so is my wife the grandmother of the little boy, and I am the grandfather of my step-brother; my wife has also a boy; my step-mother is, consequently, the step-sister of my boy, and is also his grandmother, because he is the child of her step-son, and my father is the brother-in-law of my son, because he has got his step-sister for a wife; I am the brother of my own son who is the son of my step-mother; I am the brother-in-law of my mother; my wife is the aunt of her own son; my son is the grandson of my father, and I am my own grandfather!

From Sacramento Bee, May 17.

OFF FOR YOSEMITE.

A party of Sacramentans, among whom were Charles Crocker and wife, Mrs. E. B. Redding, E. B. Crocker, and wife, Mrs. Clements, Mr. George Redding and wife of New York, started this morning for a trip to Yosemite.

SEVERE AND DESTRUCTIVE FROST.

We learn from Mr. Meyer, of the Tivoli House, located some half a mile beyond the city limits on the northeast, that a heavy frost ranged in this vicinity night before last, which so injured his and his neighbors' grapevines and potatoes as to destroy both crops.

CHICAGO MARKETS.

Cattle.—The receipts of Cattle for the past week were 11,938 head, and shipments 9,816 head.

The market has ruled weak, dull and unsatisfactory since the date of our last, and prices have depreciated full 25c for all qualities.

Money.—The condition of the Money Market continues easy, with very little activity. Trade is fair, and gradually increasing. The farmers have had an unusually favorable season; a largely increased breath of land has been sown, and bountiful crops are thus far promised, and unless prices of produce rule very low and depressed, this state of affairs promises large and remunerative earnings for our Western railroads the present year.

Flour.—The market has ruled very quiet during the week review, transactions having been exceeding light. There was a moderate shipping demand, but holders were unwilling to pay the prices asked, hence the small sales reported. Holders were firm in their views, and unwilling to make any reduction on the closing prices of last week, except on some lots which parties were compelled to store. At the close there was no improvement in the demand though prices remained steady and firm.

Wheat.—The market has been in a very unsettled condition during the past week, prices ruling irregular and subject to frequent fluctuations. Early in the week there was a strong upward tendency in prices; later, however, a dull and stagnant feeling existed.

LIFE INSURANCE IN NEW YORK.

Mr. James L. Swift is insured for $55,000.

Mr W. H. Newman is insured for $15,000.

Mr. M. Firman Hunt has insurances on his life for $50,000.

Mr. Homer Morgan is insured to the amount of $100,000.

Mr. Joseph Navarro, of New York, is insured for $100,000.

Mr. Alexander Barrett has life policies to the extent of $200,000.

Mr. John H. Draper, the well-known auctioneer of New York, is insured for $40,000.

Mr. John G. Dale, the agent at New York for the Inman line of Steamers, is insured for $60,000.

Mr. Samuel Borrows, the Secretary of the Equitable Company, is insured for about $100,000.

Mr. W. A. Garrison, of the well-known New York shipping house, is insured for $45,000.

Mr. F. R. Fowler, of New York, is insured for $60,000, and his brother, W. R. Fowler, for $50,000.

James McCreery, of the great retail dry goods house of James McCreery & Co. of Broadway, New York, is insured for the large sum of $100,000.

Not only are the evils of death mitigated by life assurance, but the prosperity and comfort of life are actually increased by it.

Mr. Smith Sheldon, the senior partner in the large publishing house of Messrs. Sheldon & Co., New York, is a strong advocate of life insurance, and practically exhibits his faith in the system by having his life insured for about $80,000.

EXPORTS BY RAILROAD.

In addition to large shipments of Wool per steamer and sailing vessels, a large amount will go by rail.

A car load of Peanuts from California to Omaha is a new feature.

Wine, also, is now being sent East from the vineyards of El Dorado. Wine, too, that will do credit to the vineyards and wine makers of that fast developing vineyard country.

CLIPPINGS.

Man-hood—a hat.

A Bangor merchant glories in the fact that he shipped 15,000 dozen eggs to Boston last week.

There are in the world about 120,000 miles of railway, that have cost $10,000,000,000, and give employment to, 1,000,000 persons.

The Prussian Government lately gave $50,000 to a Berlin cook for his secret of making peas-pudding sausages that will not turn sour.

A Connecticut schoolboy has written a composition on the horse, in which he says it is an animal having four legs, "one at each corner."

It has been estimated by Dr. Burke that an average brain is capable of holding 3,155,760,000 thoughts, and Ballogue has estimated that the cerebral convolutions contains 134,000,000,000 cells.

Rothschild, the founder of the world-renowned house of Rothschild & Co., ascribed his success to the following: "Never have anything to do with an unlucky man. Be cautious and bold. Make a bargain at once."

Probably the most curious species of ant in the world is the parasol-ant of the West Indies. Dr. Forbes Winslow, in his work on "Light," says these ants walk in long procession, each one carrying a cut leaf over its head as a parasol, in the sun, and they deposit these in holes ten or twelve feet under ground, apparently with no other object than to form a comfortable nest for a species of white snake, which is invariably coiled up among them.

The best quality of mucilage in the market is made by dissolving clear glue in equal volumes of water and strong vinegar, and adding one-fourth of an equal volume of alcohol; and a small quantity of a solution of alum in water. The action of the vinegar is due to the acetic acid which it contains. This prevents the glue from gelatinizing by cooling; but the same result may be accomplished by adding a small quantity of nitric acid. Some of the preparations offered for sale are merely boiled starch, or flour, mixed with nitric acid to prevent the gelatinizing.

SPECIAL.

JAPANESE STUDENTS IN AGRICULTURE.

By the arrival of the last steamer from Yokohama, several young men came over to pursue a course of study to fit them for various positions and branches of business on their return to Japan.

Among the number came *Two* young men of good general education and from good families, who came here under the patronage of the government, to commence the study of Agriculture, and to do this by entering upon the Farm and pursuing a regular course of practical labor themselves as the best way to be truly educated.

The young men desire to find some place, some large ranch where the Proprietor would feel an interest in such studies and be willing to aid them in the pursuit of such knowledge. They do not *seek wages*, but on the contrary, would pay a just consideration beside yielding their labor but not as ordinary servants or day laborers, but good earnest honest labor by which alone true knowledge is attained.

Any Proprietor of a Ranch or Stock Farm, that would be interested in such a cause, will please address the Editor CALIFORNIA FARMER or

CHAS. WOLCOTT BROOKS, ESQ.,
Consul of Japan.

35.19.

A FARM SUPERINTENDENT.

A well educated and most thoroughly Practical and Scientific Agriculturist from Scotland, wishes to find a position as a General Superintendent of a large Farm or Ranch, where he can have a field of labor that will occupy all his time and make it very advantageous to his employer.

The advertiser is thoroughly versed in Stock Breeding, Horses, Cattle, and particularly Sheep, and is familiar with the true science of Sorting and Packing Wool for shipment.

Whoever may desire a truly competent Superintendent can obtain such by addressing

EDITOR FARMER.

MOST
IMPORTANT IMPROVEMENT
EVER MADE
ON
Sewing Machines
CAN BE SEEN IN USE AT THE
HOWE SEWING MACHINE
OFFICE,
No. 113 Kearney Street.

READ THE FOLLOWING INDORSEMENT,
signed by some of the most
Prominent Physicians:

"We the undersigned, practicing Physicians of San Francisco, having examined and witnessed the operations of

MILLS'
ADJUSTABLE TREADLE

For Sewing Machines, take pleasure in giving our testimony to the great value of the improvement, in a sanitary point of view. The peculiar feature of this new Treadle is that THE FOOT-BOARD IS MADE ADJUSTABLE BOTH VERTICALLY AND LONGITUDINALLY; so that whatever the size or shape of the foot or shoe, THE TRUE CENTRE OF MOTION OF THE FOOT MAY ALWAYS BE BROUGHT TO COINCIDE WITH THE CENTRE OF MOTION OF THE TREADLE, AND HELD THERE, thus permitting the feet to move on their natural centre without having first to overcome the inertia and weight of the heavier limbs.

First—It saves the excessive labor and waste of power consumed in keeping up the rapidly alternating motion of the lower limbs and body, whenever the maching is run with any speed.

Second—It avoids the frequent and serious injury to female health resulting directly from that motion.

By the general adoption of this Treadle we believe the only serious objection to the foot-power sewing machine will be removed, and that so far from being prejudicial to the health of the operator, its use will prove as harmless and positively beneficial as other physical exercise, tending directly to develope the muscles of the calf of the leg, strengthen the ancle, restore the elasticity of the foot, and promote circulation in the extremities."

Signed,

"I have carefully examined the New Treadle attached to the Howe Sewing Machine, and consider it a valuable improvement, doing away with most of the motion of the back and pelvis, which is unavoidable in operating the old style treadle, and which has proven so detrimental to health. I cheerfully recommend it to those who work with Sewing Machines, believing it to save them much suffering.

GET THE BEST.
Webster's Unabridged Dictionary.
10,000 *Words and Meanings not in other Dictionaries.*
3000 Engravings. 1840 Pages Quarto.
A necessity to every intelligent family, student, teacher and professional man. What Library is complete without the best English Dictionary?
"GET THE BEST."
"All young persons should have a standard
DICTIONARY
at their elbows. And while you are about it, *get the best*; that Dictionary is
NOAH WEBSTER'S
The great work unabridged. If you are too poor, save the amount from off you back, to put in into your head."—*Phrenological Journal.*

WEBSTER'S QUARTO DICTIONARY.—Every body knows about Webster's Dictionary, and every man, woman and child, ought to have access to it.

It will tell you everything in regard to your mother tongue which you want to know. A MAN WHO WOULD KNOW EVERY THING, OR ANY THING, AS HE OUGHT TO KNOW, MUST OWN WEBSTERS LARGE DICTIONARY it is a great light, and he that will not avail himself of it must walk in darkness. Every young housekeeper should lay it in, to occupy the place which was formerly filled with decanters and wine-glasses.

Every *farmer* should give his sons two or three square rods of ground, well prepared, with the avails of which they may buy it. Every mechanic should put a receiving box in some conspicuous place in the house, to catch the stray pennies or the like purpose.

Lay it upon your table by the side of the Bible—it is a better expounder than many which claim to be expounders.

It is a great labor-saver—it has saved us enough in one year's use to pay for itself; and that must be deemed good property which will clear itself once a year.

Published by G. & C. MERRIAM, Springfield, Mass.
Sold by all Booksellers in California.

SPECIAL NOTICE

TRAVELLING AGENTS WANTED.

We are desirous of employing several right smart men as Agents and Canvassers for our Journal, with our NEW LIST OF PREMIUMS.

Right smart young men, who have some knowledge of the Science of Agriculture and are gifted with the science of *Courtesy* and Politeness, can have a good opportunity to make a good salary.—None need apply without the best of References.

☞ Apply at Editorial room between the hours of 5 and 6 p.m.

To Farmers & Gardeners.

If the Garden Seeds you may have proved fresh and true to name, stick to the man who sells them to you; he is worth encouraging. If you have not found them fresh and true, I shall be happy to add your name to those of the fifty thousand farmers and market gardeners scattered throughout the United States and Canadas, whom I annually supply with my *warranted* garden seeds. I raise over one hundred varieties of vegetable seed on my three farms and as every practical farmer and gardener knows, it is for the interest of all who plant to get their seed *directly from the grower*. I invite attention to my Cabbage, Onion and Squash seed. My large Vegetable and flower seed Catalogue, abounding with engravings sent *free* to all.

WAITING FOR PAPA.

We have put away our playthings
Cleaned the trinkets from the floor,
Mamie's doll is in its cradle,
My old horse behind the door:
With our tidy hands and faces
All impatiently we wait
For the sound of papa's coming,
And his footstep at the gate.

Little ones, when all the lustre
Of your locks shall change to snow,
When the light shall all be faded
From those eyes that sparkle so,
May you lay your very idol,
All earth's playthings gladly by,
And as fondly greet our Father
When he cometh in the sky.

—*The Christian Weekly.*

AN ENCHANTED ISLAND.

A wonderful stream is the river Time,
As it runs through the realms of tears,
With a faultless rhythm, and a musical rhyme,
And a broader sweep and a surge sublime,
And blends with the ocean of years.

There's a musical isle up the river Time,
Where the softest of airs are played,
There's a cloudless sky, and a tropical clime,
And a song as sweet as a vesper chime,
And the tones with the roses are staying.

The name of this isle is the "Long Ago,"
And we bury our treasures there;
There are brows of beauty, and bosoms of snow,
There are heaps of dust—but we loved them so,
There are trinkets, and tresses of hair.

There are fragments of songs that nobody sings,
And a part of an infant's prayer,
There's a lute unswept, and a harp without strings,
There are broken vows, and pieces of rings,
And the garments she used to wear.

There are hands that are waved when the fairy shore
By the mirage is lifted in air
And we sometimes hear through the turbulent roar
Sweet voices we heard in the days gone before,
When the wind down the river is fair.

Oh, remembered for aye be that blessed isle,
All the day of life till night;
And when evening comes with its beautiful smile,
And our eyes are closing to slumber awhile
May that "Greenwood" of soul be in sight.

CONVERSATION.

How incalculably would the tone of conversation be improved if it offered no exceptions to the example of Bishop Beveridge: "Resolve never to speak of a man's virtues to his face, nor his faults behind his back." A golden rule, the observance of which would at once banish flattery and defamation from the earth. Conversation stock being a joint and common property, every one should take a share in it, and yet there may be societies in which silence will be our best contribution. When Isocrates, dining with the King of Cyprus, was asked why he did not mix in the discourse of the company, he replied, "What is seasonable I do not know, and what I know is not seasonable." A brilliant talker is not always liked by those whom he has most amused, for we are seldom pleased with those who have in any way made us feel our inferiority. "The happiest conversation," says Dr. Johnson, "is that of which nothing is distinctly remembered but which leaves behind a pleasing impression." "No one," says Dean Locker, "will ever shine in conversation who thinks of saying fine things; to please, one must say many things indifferent, and many very bad." This last rule is rarely broken in society.

Food as Motive Power.

The effect of food upon the passions and feelings are thus poetically rendered by Prior:

Observe the various operations
Of food and drink in several nations.
Was ever Tartar fierce and cruel
Upon the strength of water gruel?
But who shall stand his rage and force
If first he rides, then eats his horse.
Salads, and eggs, and lighter fare,
Tune the Italian spark's guitar;
And if I take Don Congreve right,
Pudding and beef make Britons fight.

The brain, according to Liebig, is altered chemically by every atom of opium taken into the stomach, and a new train of vital actions must follow this change in chemical composition and minute organization. Dunberry also favors this chemical view of life actions.

A health paper says that the habit of taking a nap after dinner is a bad one. Ten minutes' sleep before dinner is worth more than an hour after. It rests and refreshes, and prepares the system for vigorous digestion. If sleep is taken after dinner it should be in a sitting posture, as the horizontal position is unfavorable to healthful digestion.

Spirits given to A baby, or, what is much the same, drank by its mother, is poison for the body, and may be the starting of a habit which leads to ruin.

EDUCATION OF DAUGHTERS.

[In the May Number of the *Herald of Health* is a series of Letters from Mrs. R. B. Gleason, M. D., furnishing valuable instructions which Mormons should observe if they wish well to their Daughters.

The series embrace the study of the *Eyes, Exercise, Sleep, Mental Influences, &c.* We give "Diet" and "Exercise" and hereafter give other Chapters, these now given are vitally important.—Ed. F.]

DIET.

Students who apply themselves closely, need to be well nurished. It requires good food and a great amount of it to make the brain work well, and to repair the body. Sedentary habits often induce indigestion; therefore, many have supposed the less they eat the more they could study. About twenty five years ago earnest persons with limited means worked and studied very hard, and ate and slept very little. Many a good constitution was thus ruined. Nervous dyspepsia was often induced by overwork and lack of suitable nutrition. The more abstemious they were as to food, the less able they became to dispose of what was taken. Many of our ladies *not* pinched by poverty or pressed by hard work, lose their appetite by too little exercise, too little sleep, and too much study. This course, if long continued, will induce indigestion. The nervous system being exhausted through brain-work, has not power to carry on the bodily functions, and the victim wonders that she should have any stomach trouble when she had eaten so very sparingly. The truth is, limited nutrition has induced indigestion.

The morbid appetite of school-girls, for which they are often blamed, or ridiculed, is a nervous disease brought on by impaired nutrition. There is a lack, a longing, "a sense of goneness," which craves, but lacks relish for hurtful food. Med suffering from this, take to beer and alcoholic drinks; women more often to tea and coffee in excess, and school-girls to chalk, slate-pencils, cakes, candies, etc. A busy brain, as well as an active body, requires beef, bread, oysters, eggs, vegetables, and fruit, all well cooked, and plainly prepared. Physiologists are making investigations as to what food is suited to supply brain and nerve-power, and physicians are talking of remedies best able to restore it when lost, and perhaps in years to come, we may have a bill of fare exact and definite for those who wish to work with the head, and another for those having hand-labor. But certain it is that those of intense activity ought not to be helped on, and hurried on, by stimulants, or they will die before their time. Stimulants may be use ful or emergencies, for sickness, or for advancing years but young life, with its enthusiasm, does not need the aid of tea, coffee, or alcohol, unless impaired by sickness or over-work. Those will help one through a hard lesson, or a night's gayety, but if it be persisted in, it is at the expense of strength for the years that follow. Tea makes our girls over excitable, wakeful, nervous. Coffee induces constipation, yellow skin, and mental depression. Washerwomen take their strong tea and "wash it off," work it off through the muscular system, and are ready to sleep. Our sensitive girls take it and are bright for study, for social life, but are wakeful after, and they come to live on tea and coffee, and care less and less for plain nourishing food. There are few chronic individuals so hard to cure as those who have long studied with too little food and too little sleep. If girls must study too hard, if women must work when they are not able, or if they must be social and gay when they do not feel so, then tea is the best aid, the stimulus safest and best, and very efficient if not relied upon constantly. If needed, it is the best in the morning. At night it makes one wakeful, and hence should not be used, save when we *must* sit up, and then it is as good as the Irishman's whisky, which was "vituals, and drink, and lodgings." But if used two or three times a day than something stronger is wanted for extra occasions, for emergencies.

School-girls remain plump and fresh sometimes when they are not imperfectly nourished. The brain work brings a determination of blood to the head, which gives a flushed face. Beside this, those of studious habits are likely to suffer from torpidity of the excretory organs, hence the system is plump from being loaded with effete material, which should have been thrown off by way of the skin and bowels. Thus, what seems to be strength, is merely weight, weariness, an excess of adipose, with a poverty of muscular tissue. In such cases there is a craving for something to eat, but a lack of appetite for regular rations. The whole system is surcharged with impurities which should have been thrown off, and this depresses the appetite and disturbs digestion.

Half the complaints of school-girls about food are the result of lack of relish. Then they feel half famished and nibble cakes, crackers, and candies between meals, or have a "box of goodies" from home, and these will certainly destroy all desire for bread and meat. Of course in supplying a table for large numbers there must be a lack of deference to individual tastes, which can only receive attention in the home circle. But the need of change in occupation, quite as much as in food, causes nine-tenths of the trouble about farm. Over-study, over-anxiety, too little sleep, too little exercise, too much sugar, takes away the appetite, and those who can not eat should not study, for nerve-power is thereby permanently impaired.

EXERCISE.

Our girls, amid the multiplicity of muscular work have less strength than time, for mental activity. They have no elasticity, no exuberance of life, to expend in sheer physical exercise. There is no fun and frolic left, and they ask with a forlorn face, and languid air, "Can't I be excused from exercise?" and look as if they wanted to lean up somewhere and think, like Mark Twain's mule, in which case I fear their thoughts would be neither brilliant or cheerful. Young ladies out to walk, with ribs compressed, arms pinioned, staid as a funeral procession, going from a sense of duty, drill response to school order, get a little fresh air, but much less than they would if there was freedom of chest, and fun and frolic to prompt the free inspiration, the exhilarating exercise. The discipline at our military schools is found excellent to develop the chest, improve the step and general bearing, and to correct physical defects, etc. Gymnastics—Dio Lewis's system—should do the same for our girls; but to accomplish this work, the young lady should not only have her period of her daily drill, of an hour or so, but should be dressed so that she can breathe deep, and sit erect, without whale-bones or braces, and walk without hindrance at all times. Instead of this, after the exercise to expand the chest, she goes straight into the compressors again. While in uniform, she is careful to stand straight, to walk erect; but when once "beflorbelowed, the *dress* is *all*, the position nothing. Some of our schools have very fine facilities for physical culture. But the pupils are equally too hurried, too tired with their lessons, to get much benefit therefrom. Gymnastics, riding, skating, rowing, etc., must consume both time and strength. For instance, a mother asks me if riding lessons will not be of advantage to her daughter? Upon examination I find the young lady is already so burdened with lessons, that she is worried and nervous, and can not eat or sleep as much as she ought. Horseback exercise would do her good if she could take a good sleep after it. But tax her delicate frame, which scarcely weighs eighty pounds, with severe physical exercise, and then send her to a hard study before resting, and it is making a bad condition worse. We must have nerve-power for muscular exercise, as well as for mental activity, and the secret of good health and good scholarship, is to properly divide this life-element, between the wants of brain and body.

THE OLDEST BOOK IN THE WORLD.

BY J. P. LESLY.

1. Health be to him that honoreth me! Honor be to him that goeth with me willingly!

2. Open lies the casket of my speech; uncovered the place of my word-building.

3. Furnished with swords to attack the negligent, who is never found present at his post.

4. When thou sittest in the company of men, scorn thou thy favorite viands; for a short moment renounce them with thy heart.

5. For gluttony is a vice, and scandal lies hidden therein. A cup of water slakes one's thirst; a mouthful of Schnu strengthens the heart.

6. Virtue is the end of good things, and what is of no account determines greatness.

7. Miserable is he who is servant to his belly, or who spends his time in senselessness. Fatness lords it over the house of such.

8. When thou sittest with a banqueter, who eats until his girdle bursts:

9. When thou drinkest with a wine-bibber, who receives thee, his heart rejoicing itself with drink more than a butcher with flesh:

10. Take thou what he handeth thee: reject it not

11. Nevertheless, it is disgusting, when he, who cannot possibly make himself intelligible in any word, torments himself in vain to win for himself a favorable heart.

13. He is a shame to his mother and to his friends.

18. When he knocketh as a suitor at the door, every one crieth out, Make haste! depart!—*From Old and New for May.*

A STORY FOR JOHN B. GOUGH.

The distinguished orator can so well illustrate "character" that we select this anecdote of the Western States for him to comment on:

There is a droll story going through the newspapers of a deacon in Illinois, who had no instrumental music in his soul, and who strenuously opposed, though in vain, the purchase of a church organ. Soon after, being asked to engage in prayer, he retorted with mordicant sarcasm: "Call on the machine! If it can sing the glory of God, it can pray, too. Call on the machine!" Poor deacon! perhaps he did not comprehend exactly how much of a "machine" he was showing himself to be. It has not probably dawned upon his mind that there may be quite as much formalism in rejection; and he never, for a moment thought that the call upon himself to pray might be as purely mechanical as the performance of the piped monster in the loft.

A GOOD LIFE.

Virtue undoubtly promotes longevity, as witnessed by the long lives of newspaper men. The oldest newspaper man in the world, Mr. Lewis Doxat, died in London the other day. Sixty-five years ago he was editor of the *Morning Chronicle*, the great daily organ of the Whigs. After that he conducted the *Observer*, a leading Sunday paper, for over fifty years. He was born in 1779—only two years younger than Sir Walter Scott—and therefore had attained the great age of ninety-eight. He was a paragraphist at the age of sixteen, in 1789, when the first French Revolution began, and consequently had witnessed the rise, progress and fall of the first Napoleon. He retained all the faculties of his mind to the last.

Satire is a sort of glass, wherein beholders generally discover everybody's face but their own, which is the chief reason for that kind of deception it meets in the world, and that so very few are offended with it.

An American widow, with one little girl three years old, advertises in an Eastern paper for a situation to do general housework, cook, or teach music. What a sad history that appeal hints at!

Several cases lately of poisoning by chloral hydrate have been mentioned. They were people who took the drug without the directions of medical men.

SOMETHING NEW.

$1,000 TO $3,000 PER ANNUM

EVERYBODY AN ARTIST.

WITH my new English Art of Painting and Drawing Oil Paintings, Landscapes, Portraits, and all kinds of Scenery, any person without previous experience can paint a life-like picture of himself or herself, or of any relative, friend, General, Statesman, or Scenery, in two hour's time. The chemicals and everything necessary to paint 20 or 30 pictures can be secured at any good drug store, exclusive of apparatus for drawing, for $2.50 to $3 00, or I will forward the outfit ready for work for $1.00. For permanent, profitable employment this is the best business ever offered to the public. You can teach it at your own homes, in towns school districts etc., and make money rapidly and honorably. A class of 50 scholars at $5 per scholar, can be taught in from two to four hours. At Spencer, Ind., I made $16 in one hour teaching this new art. At Shelbyville, Ind., $45 in four days, and at Greensburg, Ind., from $5 to 15 each evening, through the entire week. At Alliance, O., I received order four weeks' work, and wherever it has been introduced it has proved a perfect success. As parlor ornaments these pictures are unexcelled for beauty and durability. I am permanently engaged as a teacher in the N. M. & F. College, located at Valparaiso, Ind., so that none need hesitate to send for this art. Satisfaction given or the money will be returned. For full and complete instruction both for painting and apparatus for drawing pictures, remit $1 to

Prof. G. W. HEWITT,

PACIFIC ANATOMICAL MUSEUM,

....AND....

GALLERY OF NATURAL HISTORY AND SCIENCE!

Eureka Theatre, Montgomery Street,

This truly elaborate and magnificent collection of all that is strange, wonderful and curious in SCIENCE, NATURAL HISTORY, AND ART, is now open to the public.

Extensive embellishments and improvements have been made. The additions will include an immense collection in BOTANY, ICHTHYOLOGY, and ENTOMOLOGY.

COMPARATIVE, FLORAL, AND BOTANICAL ANATOMY will be largely illustrated, and form a leading feature of the institution. Every exertion has been used to render this superb collection the most INSTRUCTIVE, AGREEABLE, and USEFUL IN THE WORLD.

INSECT AND ANIMAL LIFE will be beautifully displayed and the celebrated Du Chaillu GORILLA which was exhibited ALIVE in Paris, has been added to the already vast collection of HUMAN AND COMPARATIVE ANATOMY.

and 7 on P. M. Sundays from

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us.

THE BURDETT

CASES NEAT and DURABLE.

INTERIOR WORK Unequalled.

ORGAN.

What they are thought of by the leading organists of the Pacific Coast:

"Superior to any instrument of the kind."
Mr. GEO. T. EVANS, the well known Composer, and Organist of the Church of the Advent, S. F.

"I recommend the Burdett for superiority of tone, delicacy and power, and in every respect far ahead of all other reed instruments."
Mr. S. D. MAGEE, Organist of St. Johns Church, Oakland, Cal.

"After trying the Burdett, I take great pleasure in adding my voice to the many already sounding their praise."
Mr. H. M. BOSWORTH, Organist of Calvary Church, S. F.

"Far ahead of all I have ever heard or tried."
T. W. C. RHIND, Organist of Howard Street M. E. Church, S. F.

"Examining the "Burdett Organs" I was greatly and agreeably surprised at finding such variety, delicacy and power."
F. J. McCABE, Organist St. Francis Church, S. F.

"Consider the Burdett the finest of reed organs."
CHAS. H. HOFFMAN, Organist of the Mission Street Synagogue.

"The most effective reed instrument for Church, School or Parlor."
J. MULLER, Organist St. Ignatius Church, S. F.

"A decided novelty and great improvement on the many styles now in use."
GEO. SCHUCAE, Organist of the Methodist Church, San Jose.

"Surpassed my expectations of a reed instrument and, comprises everything needed from the solemn music of the church to the popular music of the day."
EVERETT POMEROY, Organist of the Presbyterian Church, San Jose

"They excel anything of the kind I have ever seen before."
Mr. JAS. E. LAWRIE, Santa Clara

"Their volume and purity of sound is far superior to any reed instrument I have ever seen, and combinations most perfect."
D. H. BERLIN, Professor of Music, Stockton

"The combinations, power and delicacy in all cases are surprising, and I cheerfully recommend the Burdett."
W. CARMICHAEL, Organist of St. Mary's Church, Stockton.

☞ Our descriptive price list now ready. Schools, Churches, Lodges, etc., will be dealt liberally with, and accommodation extended to responsible buyers. Address GRAY'S MUSIC STORE, Agency for the Pacific Coast, 624 and 626 Clay Street, San Francisco.

Miscellan

A SWIM FOR LIFE.

BY REV. W. C. SCANDLIN.

After I had been about an hour in the water, my labor and the chill began to tell seriously upon me. I had tried all familiar ways of rest, by floating and treading water, attempting twice to obtain a little support from the bag I was towing: but the water had leaked through its mouth, saturating the clothes and reversing its position, the bag being under water, and the plank above; the last being its only means of support, frail even at that, for with the weight of my hand it would settle. This was a great addition to my task,—double work when I seemed nearly exhausted. If I should leave the bag, I could get on shore with ease; but our all was in it. We had nothing on; and Callao was not quite so favorable a place for such an appearance as the Sandwich Islands would have been. No: I must master with, for I should certainly fail without it. I struck out again, knowing that there was a large buoy about a half a mile from the shore, where the mail steamers usually moored to coal. After what seemed to me an endless effort, I discovered the object of my search. Here my hoped for succor almost proved my complete destruction. Its sloped and slippery sides defied my every effort. If I gained a foot in my desperate struggle towards its summit, I was sure to slip, and descend like a dead weight far beneath the surface, rising again to renew the conflict with what seemed a floating fiend. During this part of my ordeal, I had lost the end of the tow-rope from my mouth, and taken in more salt water than was convenient or healthy at so late an hour of the night. Fully convinced that further effort in that direction was worse than useless, I secured the bag; and throwing the end of the rope over the upper edge of the buoy, catching its end on the opposite side, I gained from it, in this way, some little support. I whistled *cautiously*, aye, incautiously, but no response. Had Harry reached the shore, or gone down? Question I did not want to discuss then; so slipping my rope from its rest, and grasping it firmly with my teeth, I headed once more towards the shore. I may have been within one-fourth of a mile of it, when further effort seemed impossible. I could hear the rattle of the pebbles, as the surf rolled them on the beach, as distinctly as though I stood upon the beach itself. I came into a perpendicular position, feeling sure that I could touch bottom; but, the moment I reached the perpendicular, I went down, down, down, in a troubled dreamy state until the floating bag stopped my descent, and called me by its check to consciousness. How distinctly I remember the dog-paw motion by which I ascended, fully convinced that drowning and I were very close neighbors! I wondered where the sharks were, that they had not assisted in my programme. I floated on the water, and seemed to float through the past. The dear ties of home seemed to smile upon me, while the record of my life went by in review. Nothing of malice or hate, no stain of crime, but much that was questionable and wrong. Suppose this is the end? Well, if it is, I must go as I am, leaving all to Him whose angles are said to "sit up aloft, and look out for the life of poor Jack;" but, if I reach the shore, purer and better deeds shall grow from my efforts.—*From Old and New for May.*

A BARBER'S RAZOR.

Recently we have seen two of the worst cases of *Sycosis Contagiosum* which have ever come under our notice. Both patients were shaved by the same barber, and no doubt by the same razor as that used—for the barber acknowledge his fault—in shaving "a man with a bad chin." In one patient the yellowish scales have extended to the upper lip and sides of the face covered by hair. The vegetable nature of the disease, and the rapidity with which the seeds are transmitted from part to part, until the cryptogamic plant surrounds every hair follicle, is only too well known for repetition here. Our chief object in directing public attention to a most serious matter is, that barbers will learn, through us, to be more careful in indiscriminate shaving, and that the public seeking their aid will, for their own sake insist upon what we hope will now become an universal practice in the barber-shop—namely, the razor to be immersed in some warm water before being applied to the face. This is pretty sure to destroy the vegetable organism, should any exist, on the instrument. Those who may have suffered from *Sycosis Contagiosum*, and the physician who has had experience in the treatment of it, alone know the protracted nature of a most unsightly complaint in yielding to treatment, and the value of the hint we offer in the simple immersion of the razor in warm water, and then wiped before use. Indeed, in the filthy barber-shops of our great towns, diseases of more kinds than *sycosis* are propagated; but with that we do not purpose entering upon now. Our simple desire being to record a painful occurence with which we have recently met—a faithful corroboration of the testimony of Gustav Simon, of Gruby of Vienna, and of the experiments made by Foville, who noted over and over again the transmission by contagion of *sycosis*, from the use of a razor employed in shaving an affected person.—*London Medical Press.*

The other day a women stepped into the office of the county clerk of Indianapolis and asked if "here's where divorces were made." The clerk replied that sometimes they were granted. "Well," replied she, "I've concluded to leave my husband; he's mean; I want a divorce; how much does it cost?"

One of the French journals says that a society has been formed in Paris, now numbering more than a hundred members, each of whom declare that his body, after death, be used for the promotion of anatomical science.

HOW TO CHEAT THE DOCTOR.

A soldier, a patient at Herbert Hospital, England, a few days ago, wrote the following advice to a comrade:—"Previous to going to hospital rub you tongue with chalk, ready for the word 'Put out your tongue;' then, when the doctor is going to feel your pulse, be sure to knock your elbow against the wall, and it will beat to any number in a minute; then, if you wish to persevere to be invalided, be on the look out for a friend to bring you a bit of raw bullock's liver every morning, in order to spit blood for the doctor; of course, have a little bit of the liver in your mouth, under your tongue, fresh, ready for him when he comes round the hospital ward, and have a good piece ready to spit out for him when he approaches your cot: then give a great sigh and a groan, and you are sure to be ordered lamb chops, chicken, rice pudding, port wine, Guinness's stout, in fact you may live on the fat of the land for the remainder of your soldiering, which will not be long; but, depend upon it, you are sure of a pension, even under ten years' service."

We hope there are not many in hospital quite so clever as this "old soldier."

LIFE INSURANCE.

In all policies of life insurance, these among other questions, occur: "Age of father, if living?" "Age of mother, if living?" A man in the country who filled up an application to one of our companies, says the Hartford *Post* made his father's age one hundred and twelve years, and his mother's one hundred and two. The agent amazed at this showing, sucied he had got an excellent subject, and remarked that the man came of a very long-lived family. "Oh, yousee, sir," replied the applicant, "my parents died many years ago; but if living, would be aged as here put down." "Oh, I see," said the agent.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

freed from the resinous or pitchy matter which attach on to oil, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $5 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops Castor Beans, Flax, Hemp, &c., and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and invaluable to the Cultivator of the Soil.

FARMER Office will be promptly attended

GENUINE COFFEE.

We have received direct from the Plantations of Costa Rica an Invoice of the Seed Coffee of that Country.

This seed comes in the whole envelope or round Kernel, and is fresh and more sure to vegetate.

We offer packages in small lots sent by mail at $1 per package.

This represents the prices paid by the dealer to the producer on the wharf or landing place.

Corrected Weekly, by Editor Farmer.

San Francisco, May 18th.

Money and Exchange Table.

Exchange on England	110x110½
Price of Gold	111
Value of Greenbacks	90@91
Value of Wheat in Liverpool	12s. 3d.
do do New York	170@175 bush

Price of Money in Eastern Cities.

Boston—Money is abundant at 4 to 5 per cent. on call—and loans on time made at 6 to 7 per cent.

New York—Money is easy at 4 to 5 per cent. on call—6 per cent. on time.

Price of Money in San Francisco.

Money is considered to be very abundant here, yet the rates are 1 to 1½ per cent per month Bank rates. Large amounts are loaned by capitalists at 10 per cent. per annum, and great loans at 8 per cent.

GRAIN AND FLOUR MARKET.

The Grain market of Liverpool has again advanced 2d.—now ruling 12s. 5d.—and yet our own market recedes. Will our Grain-growers look to this fact, was it a want of Wheat that caused the rise, or the move of speculators? Was it the abundance here that caused it to recede? No, the arrivals are small—it was there is no demand for shipments abroad because "It don't pay to ship" it is held th high.

There is now at least Thirty Thousand Tons of Old Wheat "lying round loose" over this State and Oregon—has a large pile to spare, and this with more favorable reports of crops in this State, the price is not and cannot be sustained, it has receaded from 3.15 for extra to 2.90@2.95 that is the outside now.

Barley and Oats are both dull of demand and prices declining and will go lower.

Corn and Corn Meal in good and fair demand—other small grains steady.

Potatoes not so brisk, the big speculation is over. Beans not to much demand. Onions scarce and passing away.

Hops abundant of California growth and low in price.

Hay comes in with a rush, so much grain hay made, prices has fallen.

Retail Prices in the Fruit Market.

Bulletti & Sarmi.

The Fruit market can be said to be *mouth watered*, as it is now high meridian in "Strawberry Time," they come to market by *Tons* and *Tons of Tons*, never has our market been so fully supplied, and rarely so abundant and so cheap. *Four Dollars a Hundred pounds*, or peddled about the streets at *Two Bits a four pound box*, they are now so cheap that poor children, heaven help them, now they shall have a taste, only 30 to 40 Tons come to our market daily.

Tahite Oranges nearly a half a million have arrived good and cheap.

Cherry Currants begin to show their clusters in market, selling at 25@30.

Cherries come in fine, sell freely. Gooseberries abundant and cheap, other small fruit promises to be abundant.

The crop of Grapes, Peaches, Apricots, Nectarines, Figs, Pears and Apples give great promise. It will be a very great *Fruit year*.

Dairy—Butter, Cheese, Eggs etc.

M. D. French & Co.

The Dairy market may be said to be steady—prices are maintained as the supply only comes to meet the demand—this keep up the prices of Butter and Eggs.

Our Dairy-men would do better to study the market, and sell when there is a demand; they miss good sales often by the "hold on" principle—our motto is always "meet the market" that makes an outlet for more.

Eggs are plenty and prices must go lower, as Oregon and Chicago will look to our market for an outlet for their surplus.

REDUCTION IN PRICE

AND

Liberal Club List

With a desire to place the CALIFORNIA FARMER in every family on this Coast we have concluded to make a

Liberal Reduction in Price,

and to place it at such a sum as that every Cultivator of the soil could have it.

We have announced the Terms in another column, and here we give additional inducements to our patrons and friends to not only subscribe for the FARMER, but to secure other valuable Publications at a moderate price also.

We make this announcement for the express purpose of meeting the wants of a large increasing Agricultural population, and a large emigration that will soon be coming to our shores, who need the information of our resources, and we feel we can serve our State in no better way than to give to these new comers the

CALIFORNIA FARMER

at a very reasonable sum, so that every family can have a copy.

THE FLOWER OF LIBERTY.

What flower is this that greets the morn,
Its hues from Heaven so freshly born?
With burning star and flaming band
It kindles all the sunset land:
O tell me what its name may be,—
Is this the Flower of Liberty?
It is the banner of the free,
The starry Flower of Liberty!

In savage Nature's far abode
Its tender seed our fathers sowed;
The storm-winds rocked its swelling bud,
Its opening leaves were streaked with blood,
Till lo! earth's tyrants shook to see
The full-blown Flower of Liberty!
Then hail the banner of the free,
The starry Flower of Liberty!

Behold its streaming rays unite,
One mingling flood of braided light,—
The red that fires the Southern rose,
With spotless white from Northern snows,
And spangled o'er its azure see
The sister Stars of Liberty!
Then hail the banner of the free,
The starry Flower of Liberty!

The blades of heroes fence it round,
Where'er it springs is holy ground;
From tower and dome its glories spread;
It waves where lonely sentries tread;
It makes the land as ocean free,
And plants an empire on the sea!
Then hail the banner of the free,
The starry Flower of Liberty!

Thy sacred leaves, fair Freedom's flower,
Shall ever float on dome and tower,
To all their heavenly colors true
In blackening frost or crimson dew,—
And God love us as we love thee,
Thrice holy Flower of Liberty!
Then hail the Banner of the Free,
The starry Flower of Liberty!

WASHINGTON'S FAREWELL ADDRESS

"FRIENDS AND FELLOW CITIZENS.

"The period for a new election of a citizen to administer the executive government of the United States being not far distant, and the time actually arrived when your thoughts must be employed in designating the person who is to be clothed with that important trust, it appears to me proper, especially as it may conduce to a more distinct expression of the public voice, that I should now apprise you of the resolution I have formed, to decline being considered among the number of those, out of whom a choice is to be made.

"I beg you, at the same time, to do me the justice to be assured, that this resolution has not been taken, without a strict regard to all the considerations appertaining to the relation which binds a dutiful citizen to his country; and that, in withdrawing the tender of service which silence in my situation might imply, I am influenced by no diminution of zeal for your future interest; no deficiency of grateful respect for your past kindness; but am supported by a full conviction that the step is compatible with both.

"The acceptance of, and continuance hitherto in the office to which your suffrages have twice called me, have been a uniform sacrifice of inclination to the opinion of duty, and to a deference for what appeared to be your desire. I constantly hoped that it would have been much earlier in my power, consistently with motives which I was not at liberty to disregard, to return to that retirement from which I had been reluctantly drawn. The strength of my inclination to do this, previous to the last election, had even led to the preparation of an address to declare it to you; but mature reflection on the then perplexed and critical posture of our affairs with foreign nations, and the unanimous advice of persons entitled to my confidence, impelled me to abandon the idea.

"I rejoice that the state of your concerns, external as well as internal, no longer renders the pursuit of inclination incompatible with the sentiment of duty or propriety; and am persuaded, whatever partiality may be retained for my services, that in the present circumstances of our country, you will not disapprove my determination to retire.

"The impressions with which I first undertook the arduous trust, were explained on the proper occasion. In the discharge of this trust, I will only say that I have, with good intentions, contributed towards the organization and administration of the government, the best exertions of which a very fallible judgment was capable. Not unconscious in the outset, of the inferiority of my qualifications, experience, in my own eye, perhaps still more in the eyes of others, has strengthened the motives to diffidence of myself; and, every day, the increasing weight of years admonishes me more and more, that the shades of retirement is as necessary to me as it will be welcome. Satisfied that if the circumstances have given peculiar value to my services, they were temporary. I have the consolation to believe that, while choice and prudence invite me to quit the political scene, patriotism does not forbid it.

* * * * *

"Here, perhaps, I ought to stop. But a solicitude for your welfare, which cannot end but with my life, and the apprehension of danger, natural to that solicitude, urge me, on an occasion like the present, to offer to your solemn contemplation, and to recommend to your frequent review, some sentiments which are the result of much reflection, of no inconsiderable observation, and which appear to me all important to the permanency of your felicity as a people. These will be offered to you with the more freedom, as you can only see in them the disinterested warnings of a parting friend, who can possibly have no personal motive to bias his counsel. Nor can I forget, as an encouragement to it, your indulgent reception of my sentiments on a former and not dissimilar occasion.

"Interwoven as is the love of liberty with every ligament of your heart, no recommendation of mine is necessary to fortify or confirm the attachment.

"The unity of government which constitutes you one people, is also now dear to you. It is so justly so; for it is a main pillar in the edifice of your real independence; the support of your tranquility at home; your peace abroad; of your safety; of your prosperity; of that very liberty which you so highly prize. But as it is easy to foresee, that from different causes, and from different quarters, much pains will be taken, many artifices employed, to weaken in your minds the conviction of this truth; as this is the point in your political fortress against which the batteries of internal and external enemies will be most constantly and actively (though often covertly and insidiously) directed; it is of infinite moment, that you should properly estimate the immense value of your national union to your collective and individual happiness; that you should cherish a cordial, habitual, and immovable attachment to it; accustoming yourselves to think and speak of it as of the palladium of your political safety and prosperity; watching for its preservation with jealous anxiety; discountenancing whatever may suggest even a suspicion that it can, in any event, be abandoned; and indignantly frowning upon the first dawning of every attempt to alienate any portion of our country from the rest, or to enfeeble the sacred ties which now link together the various parts.

"For this you have every inducement of sympathy and interest. Citizens by birth, or choice, of a common country, that country has a right to concentrate your affections. The name of American, which belongs to you in your national capacity, must always exalt the just pride of patriotism, more than any appellation derived from local discrimination. With slight shades of difference, you have the same religion, manners, habits, and political principles. You have, in a common cause, fought and triumphed together; the independence and liberty you possess, are the work of joint counsels, and joint efforts, of common dangers, sufferings, and successes.

"But these considerations, however powerful they address themselves to your sensibility, are greatly outweighed by those which apply more immediately to your interest. Here, every portion of our country finds the most commanding motives for carefully guarding and preserving the union of the whole.

* * * * *

"While then every part of our country thus feels an immediate and peculiar interest in union, all the parts combined can not fail to find in the united mass of means and efforts, greater strength, greater resource, proportionably greater security from external danger, a less frequent interruption of their peace by foreign nations; and, what is of inestimable value, they must derive from union an exemption from those broils and wars between themselves, which so frequently afflict neighboring countries not tied together by the same government; which their own rival-ships alone would be sufficient to produce, but which, opposite foreign alliance, attachments, and intrigues, would stimulate and embitter. Hence likewise, they will avoid the necessity of those overgrown military establishments, which under any form of government are inauspicious to liberty, and which are to be regarded as particularly hostile to republican liberty. In this sense it is, that your union ought to be considered as a main prop of your liberty, and that the love of the one ought to endear to you the preservation of the other.

* * * * *

"In contemplating the causes which may disturb our union, it occurs as matter of serious concern, that any ground should have been furnished for characterizing parties by *geographical* discriminations,—*Northern* and *Southern*—*Atlantic* and *western*; whence designing men may endeavor to excite a belief that there is a real difference of local interests and views. One of the expedients of party to acquire influence within particular districts, is to misrepresent the opinions and aims of other districts. You can not shield yourselves too much against the jealousies and heart burnings which spring from these misrepresentations; they tend to render alien to each other those who ought to be bound together in fraternal affection.

* * * * *

This government, the offspring of our own choice uninfluenced and unawed, adopted upon full investigation and mature deliberation, completely free in its principles, in the distribution of its powers uniting security with energy, and containing within itself a provision for its own amendment, has a just claim to your confidence and your support. Respect for its authority, compliance with its laws, acquiescence in its measures, are duties enjoined by the fundamental maxims of true liberty. The basis of our political systems is the right of the people to make and to alter their constitutions of government. But the constitutions which at any time exists, until changed by an explicit and authentic act of the whole people, is sacredly obligatory upon all. The very idea of the power and the right of the people to establish government, presupposes the duty of every individual to obey the established government.

"All obstructions to the execution of the laws, all combinations and associations under whatever plausible character, with the real design to direct, control, counteract, or awe the regular deliberations and action of the constituted authorities, to this fundamental principle, are of fatal tendency. They serve to organize faction, to give it an artificial and extraordinary force, to put in the place of the delegated will of the nation the will of party, often a small but artful and enterprising minority of the community; and, according to the alternate triumphs of different parties, to make the public administration the mirror of the ill concerted and incongruous projects of faction, rather than the organ of consistent and wholesome plans digested by common councils, and modified by mutual interests.

"However combinations or associations of the above description may now and then answer popular ends, they are likely, in the course of time and things, to become potent engines, by which cunning, ambitious, and unprincipled men, will be enable to subvert the power of the people, and to usurp for themselves the reins of government; destroying afterwards the very engines which have lifted them to unjust dominion.

* * * * *

"I have already intimated to you the danger of parties in the state, with particular reference to the founding them on geographical discriminations. Let me now take a more comprehensive view, and warn you in the most solemn manner against the baneful effects of the spirit of party generally.

"This spirit, unfortunately, is inseparable from our nature, having its root in the strongest passions of the human mind. It exists under different shapes in all governments, more or less stifled, controlled, or repressed; but in those of the popular form, it is seen in its greatest rankness, and is truly their worst enemy.

"The alternate dominion of one faction over another, sharpened by the spirit of revenge natural to party dissension, which, in different ages and countries has perpetrated the most horrid enormities, is itself a frightful despotism. But this leads at length to a more formal and permanent despotism. The disorders and miseries which result, gradually incline the minds of men to seek security and repose in the absolute power of an individual; and sooner or later, the chief of some prevailing faction, more able or more fortunate than his competitors, turns this disposition to the purposes of his own elevation on the ruins of public liberty.

Without looking forward to an extremity of this kind, (which nevertheless ought not to be entirely out of sight,) the common and continual mischiefs of the spirit of party, are sufficient to make it the interest and duty of a wise people to discourage and restrain it.

* * * * *

"Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. In vain would that man claim the tribute of patriotism, who should labor to subvert these great pillars of human happiness, these firmer props of the duties of men and citizens. The mere politician, equally with the pious man, ought to respect and cherish them. A volume could not trace all their connexions with private and public felicity. Let it simply be asked, where is the security for property, for reputation, for life, if the sense of religious obligation *desert* the oaths which are the instruments of investigation in courts of justice? And let us with caution indulge the supposition that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason and experience both forbid us to expect, that national morality can prevail in exclusion of religious principle.

"It is substantially true, that virtue or morality is a necessary spring of popular government. The rule, indeed, extends with more or less force to every species of free government. Who that is a sincere friend to it can look with indifference upon attempt to shake the foundation of the fabrick?

"Promote, then as an object of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it should be enlighted.

"As a very important sources of strength and security, cherish public credit. One method of preserving it is to use it as sparingly as possible, avoiding occasions of expense by cultivating peace, but remembering also, that timely disbursements, to prepare for danger, frequently prevent much greater disbursements to repel it; avoiding likewise the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions in time of peace, to discharge the debts which unavoidable wars may have occasioned; not ungenerously throwing upon posterity the burden which we ourselves ought to bear. The execution of these maxims belongs to your representatives, but it is necessary that public opinion should co-operate. To facilitate to them the performance of their duty, it is essential that you should practically bear in mind, that towards the payment of debts there must be revenue; that to have revenue, there must be taxes; that no taxes can be devised which are not more or less inconvenient and unpleasant; that the intrinsic embarrassment inseparable from the selection of the proper objects, (which is always a choice of difficulties,) ought to be a decisive motive for a candid construction of the conduct of the government in making it, and for a spirit of acquiescence in the measures for obtaining revenue, which the public exigencies may at any time dictate.

* * * * *

"Harmony, and a liberal intercourse with all nations, are recommended by policy, humanity, and interest. But even our commercial policy should hold an equal and impartial hand; neither seeking nor granting exclusive favors or preferences; consulting the natural course of things; diffusing and diversifying by gentle means the streams of commerce, but forcing nothing; establishing with powers so disposed, in order to give trade a stable course, to define the rights of our merchants, and to enable the government to support them, conventional rules of intercourse, the best that present circumstances and mutual opinion will permit, but temporary, and liable to be from time to time abandoned or varied as experience and circumstances shall dictate; constantly keeping in view, that it is folly in one nation to look for disinterested favors from another; but it must pay with a portion of its independence for whatever it may accept under that character; that by such acceptance, it may place itself in the condition of having given equivalents for nominal favors, and yet of being reproached with ingratitude for not giving more. There can be no greater error than to expect, or calculate upon real favors from nation to nation. It is an illusion which experience must cure, which a just pride ought to discard.

"In offering to you, my countrymen, these counsels of an old and affectionate friend, I dare not hope they will make the strong and lasting impression I could wish; that they will control the usual current of the passions; or prevent our nation from running the course which has hitherto marked the destiny of nations; but if I may even flatter myself, that they may be productive of some partial benefit, some occasional good; that they may now and then recur to moderate the fury of party spirit, to warn against the mischiefs of foreign intrigue, to guard against the impostures of pretended patriotism; this hope will be a full recompense for the solicitude for your welfare by which they have been dictated.

"How far, in the discharge of my official duties, I have been guided by the principles which have been delineated, the public records and other evidences of my conduct must witness to you and to the world. To myself, the assurance of my own conscience is, that I have, at least, believed myself to be guided by them.

* * * * *

"Though in reviewing the incidents of my administration, I am unconscious of intentional error; I am nevertheless too sensible of my defects not to think it probable that I may have committed many errors. Whatever they may be, I fervently beseech the Almighty to avert or mitigate the evils to which they may tend. I shall also carry with me the hope that my country will never cease to view them with indulgence; and that, after forty-five years of my life dedicated to its service, with an upright zeal, the faults of incompetent abilities will be consigned to oblivion, as myself must soon be to the mansions of rest.

"Relying on its kindness in this as in other things, and actuated by that fervent love towards it, which is so natural to a man who views in it the native soil of himself and his progenitors for several generations; I anticipate with pleasing expectation that retreat in which I promise myself to realize, without alloy, the sweet enjoyment of partaking, in the midst of my fellow citizens, the benign influence of good laws under a free government—the ever favorite object of my heart, and the happy reward, as I trust, of our mutual cares, labors, and dangers."

GEORGE WASHINGTON.

A TOUCHING INCIDENT.

Mr. John Balsir Chatterton, who died recently in England, was one of the most celebrated harpists of the century, and a gentlemen universally beloved and respected. At his funeral an incident occurred which is faithfully related in the following beautiful lines, which we quote from the London *Musical World*:—

STANZAS

By Rev. Charles Driscoll, on an Interesting Incident at Mr John Balsir Chatterton's Funeral.

O'er the grave where Music sleeps,
See the tiny warbler high,
While the loving circle weeps,
Pours his thrilling melody,
Swelling with the sacred rite,
Fuller, louder still he sings;
Till with an unwonted might,
Through the grave his carol rings.

But when the coffin's hollow sound,
From "Earth to earth" thuds on the heart,
The bird, with wild and sudden bound,
Shoots heavenward with a rapid start.
Did he a loving mission bring,
To trill a dirge o'er Music gone,
And waft the spirit on his wing
To lead the harps before the throne?

—*Watson's Art Jour*

There is only one stimulant that never yet never intoxicates,—duty. Duty put sky over every man—up in his heart, into which the sky lark, happiness, is singing.

Agriculture.

ROOTS FOR STOCK.

Perhaps in the course of time, farmers will begin to compare notes between raising small grain and grass. I think if more attention was paid the latter, it would pay better than small grain. I think it can be conclusively shown that, if half the amount of labor was devoted to meadows and pastures, which is at present devoted to the culture of wheat and oats, there would be a greater margin of profits at the year's end for the farmer, and with more ease. But this supposes a certain amount of capital, which I think is not very general; therefore, men are compelled to act as circumstances suggest. When Illinois has fewer acres of small grain, and more acres of good grass and roots with corn, her position among the States will be one of greatness in wealth and social influence. Roots are invaluable, combined with hay and corn; only those who have tried the practice can fully appreciate their importance as a promoter of healthy growth and fattening principles. I am aware some object to them on account of their watery nature. Their virtues lie in this. What more healthy to the animal system than pure water, and where so pure as in the vegetable, distilled and filtered by an unerring principle? Three-fourths of the animal system is composed of water; then how necessary to have a proper supply in its purity! To all who are skeptical about the utility of roots, I would say, try them—that is the only touch-stone of comparison. You should give hogs, say mangles, boiled or steamed, along with a little corn meal, and those hogs will thrive and grow more rapidly than when fed on corn exclusively. Physiologists say man can live too much or too long on a concentrated diet, which is equally as prejudicial to his health as the reverse. This is as applicable to the lower animals as to man; the same immutable laws govern each. I think necessity will compell their (the roots) adoption. When that occurs, I venture to predict there will be fuller pockets and less whining.

[*Farmer's Journal, Lexington, Ky.*

WHIPPING HORSES DANGEROUS.

I would caution those who train or use horses, against exciting the ill-will of the animal. Many think they are doing finely, and are proud of their success in horse training by means of severe whipping, or otherwise rousing and stimulating the passion, and then, from necessity, crushing the will through which the resistance is prompted. No mistake can be greater than this, and there is nothing so fully exhibits the ability, judgment and skill of the real horseman, as the care and tact display in winning, instead of repelling the action of the mind. Although it may be necessary to use the whip sometimes, it should always be applied judiciously, and great care should be taken not to rouse the passion or excite the will to obstinacy.

The legitimate and proper use of a whip is calculated to operate upon the sense of fear almost entirely. The affections and better nature must be appealed to in training a horse, as well as in training a child. A reproof given may be intended for the good of a child, but if only passions are excited, the effect is depraving and injurious. This is a vital principle, and can be disregarded in the management of sensitive, courageous horses, only at the imminent risk of spoiling them. I have known horses of naturally good character to be spoiled by whipping once; and one horse that was made vicious by being struck with a whip once while standing in his in his stall.—*Ex.*

OBSERVATION ON SHOEING

No person should ever allow his horse to be shod by a farrier who employs or keeps in his shop the knife used for cutting away the hoof, shaped like a small shovel, and usually braced against the shoulder when used in shovelling away the horn.

The Creator designed the frog as an elastic, insensible cushion, on which the horse should walk, as do the fowls and other animals; yet blacksmiths delight in cutting away this most useful part, and thereby expose that which is sensitive to contact with the hard road. No greater folly can be imagined; and to a sensible man it only requires to be noticed to make the error self-apparent. The blacksmith will argue that he must "cut away the rags;" and some are so ignorant as to declare they cut away the frog "to prevent pressure on it"—that it is to say, they cut it away to prevent the accomplishment of the very object for which it was made. The frog should never be cut, nor any portion of it. If allowed to make its natural growth, it becomes a perfect safety-stand and protection to the foot. In colts it may be seen in its full vigor and usefulness; but at the first shoeing, the knife goes to work, and so it continues while there is any frog to cut.—*Pub. Royal Society.*

BLOOD STOCK IN OREGON.

Oregon will become a great State for Blood Stock. The *Willamette Farmer* says:

Mr. Cross informs us that by the next steamer he will recive some fine blooded stock, purchased by him while in Chicago, consisting of ten South Down sheep, from Alexander's farm, in Kentucky; twenty Leicestershire sheep, from Cochran's farm in Canada; ten Cotswold sheep, from the same party; and eight Berkshire swine, bred from imported stock, and the best Mr. Cross could find. A portion of the Cotswold sheep were purchased in England by Mr. Cochran.

FAST YOUNG MEN.

A Boston letter says: "The Rev. Henry Morgan has repeated his lecture on 'Fast Young Men' twenty-five times in Boston, and is engaged by the dry goods merchants of the city to deliver it again for the benefit of the clerks, who will be furnished with free tickets. He presents two classes of fast young men—those who reform and those who resist every effort made for their reformation. While paying tribute to their friends, Mr. Morgan deplores the vice of such men as Coleridge, the poet, who was a slave to rum; Burns, no less a drunkard, who was in a maudlin state when he composed his immortal lines over 'Highland Mary's' grave; Douglas Jerrold, the great wit, who was a devotee of gin; Lord Byron, the sum of whose life was gin, women, and licentious poetry; De Quincey, whose imagination ran riot from the excessive use of opium; Steele, the brilliant author of the 'Christian Hero,' who was a beastly dunkard; Charles Lamb, who was a votary of the cup; and lastly, Edgar A. Poe, from whose melancholy death from *manie a potu* a wholesome moral is drawn. Mr. Morgan's description of Poe, as he appeared before the Boston Lyceum, twenty-five years ago, whilst bordering on frenzy by recent potations, makes a forcible impression on the audience. Fast young men were not beyond the pale of salvation. Bunyan, Robert Olive, Benjamin Abbot, John Summerfield, Richard Weaver, John B. Gough, and others, are mentioned among those who have been reclaimed."

[Would it not be a wise move for the "Young Men's Christian Association" to secure the services of this distinguished Lecturer for this section of country?—ED. F.]

MULCHING BEARING FRUIT TREES.

There is no doubt now by our most intelligent horticulturists about the practical advantages to be gained by mulching the surface of the orchard and fruit garden. This should be more generally practiced in fruit-producing districts, for it is the least expensive and most effective method of protecting the fruit trees against the bad results often following the frequent and sudden changes of temperature during the summer and fall months, when the surface of the ground is left exposed to the direct rays of the sun. Again, when the mulch is put two or three inches in thickness, the surface soil is constantly moist and loose, even when no rain falls for a term of several weeks, and the trees or fruit receive no check for want of moisture and food under such circumstances.

My method is to cultivate the spaces between the rows of trees in the orchard, using a small one-horse plow and cultivator, running not more than two inches deep, during the early part of the season. From the 1st to the 15th of July I have put on a heavy coating of salt hay, covering the surface as far as the branches extend. After this there is no more trouble with weeds or grass. There may a few scattered ones start up, but they are easily destroyed.

Every fruit grower knows that two or three weeks before the time of gathering the main crop of fruit, fine specimens are constantly falling off by strong winds. When the ground is mulched the majority of such specimens are not bruised or injured for sale. This saving alone I consider pays me for the trouble of mulching the orchards.

There is only one serious drawback to the application of mulch, that is the danger of hay or straw getting on fire when rendered dry by continual warm weather.—*P. T. Quinn, in N. Y. Tribune.*

WARM WATER FOR COWS.

O. H. Hubbard, Springfield, Vt., sells milk this winter and gives all his cows warm water. He mixes a pailful of shorts with water the day before it is used; then puts a quart of the shorts in a pail, and fills with warm water from the reservoir of the stove, and gives his cows all they will drink. They take from two to seven pailfuls each; they also have access to cold water in the yard. Another gentleman told me that he could take any cows that had been kept the common way, and cause them to give double the quantity of milk they had been giving, by giving them barley boiled meal. Put the meal into a pail and pour scalding water upon it, then cool it off with cold water. One of his neighbors inquired how he managed to get so much milk. He said he took good care of his cows. In Barton, Vt., two of Thomas Baker's Dutch cows calved the first of the winter, and they drank warm water the first week, but after that they had access to cold water. One of the cows gave thirty-five pounds of milk a day; the other not quite so much. L. Tenney, of Irasburg, Vt., has only one cow. He says; "I do not believe turnips and potatoes are worth anything to make a cow give milk; for when I change and give my one cow a pail of warm water with a quart of meal in it, night and morning, she doubles her milk.—*Ex.*

APPLES FOR FOOD.

The *Western Rural* says:

There is scarcely any article of vegetable food more widely useful and more universally liked than the apple. Why every farmer has not an orchard, where the trees will grow at all, is one of the mysteries. Let every housekeeper lay in a good supply of apples, and it will be the most economical investment in the whole range of culinaries. A raw mellow apple is digested in an hour and a half, while boiled cabbages require five hours. The most healthful dessert that can be placed on the table is a baked apple. If eaten frequently at breakfast, with coarse bread and butter, without flesh of any kind, it has an admirable effect on the general system, often removing constipation, correcting acidities, and cooling off febrile conditions more effectually than the most approved medicines. If families could be induced to substitute apples,—sound and ripe,—for pies cakes and sweetmeats, with which their children are too frequently stuffed, there would be a dimunition in the sum total of doctors' bills in a single year, sufficient to lay in a stock of this delicious fruit for the whole season's use.

STATISTICS OF COMMERCE AND NAVIGATION.

Monthly Report of the Bureau of Statistics, No. V, now in press, contains the statistics of our Foreign Trade for the month of January, 1871, and the seven months ending the same, compared with the corresponding periods of 1869-'70. The chief of the Bureau, Mr. Edward Young, furnishes the following synopsis:

PERIODS.	Imports.	Domestic Exports. (specie value.)	Foreign Exports.
Month ended Jan. 31, 1871,	$41,346,476	$48,577,793	$1,744,225
Month ended Jan. 31, 1870,	37,084,717	35,285,700	4,419,159
7 mos. ended Jan. 31, 1871,	279,8[illegible],803	2[illegible],610,291	15,078,386
7 mos. ended Jan. 31, 1870,	251,190,460	229,913,023	17,670,263

The proportions of the foregoing which consisted of merchandise and specie, respectively, for the seven months ended January 31, 1871, were as follows:

Articles.	Imports.	Domestic Exports, (specie values.)	Foreign Exports.
Merchandise	$207,963,123	$229,423,553	$7,649,863
Specie and bullion,	11,927,380	16,185,229	7,378,546

SEVEN MONTHS ENDED JANUARY 31, 1870.

Articles.	Imports.	Domestic Exports, (specie values.)	Foreign Exports.
Merchandise	$237,022,730	$205,186,693	$9,208,941
Specie and bullion,	14,167,730	24,789,321	8,461,319

The values of the Imports and domestic and foreign Exports carried in American and foreign vessels and in cars and other land vehicles, during the seven months ended January 31, 1871, were as follows:

	Imports.	Domestic Exports, (mixed values.)	Foreign Exports.
American vessels,	$77,829,503	$104,990,102	$5,482,303
Foreign vessels,	193,413,288	121,163,605	8,341,754
Other vehicles,	8,637,812	3,224,153	1,403,229

SEVEN MONTHS ENDED JANUARY 31, 1870.

	Imports.	Domestic Exports, (mixed values.)	Foreign Exports.
American vessels,	$78,370,504	$105,167,504	$6,376,363
Foreign vessels,	172,9[illegible],956	170,110,944	11,263,900

The value of foreign commodities remaining in warehouse January 31, 1871, was $46,804,589, against $52,676,735 January 31, 1870.

Vessels entered and cleared in the foreign trade during the twelve months ended January 31, 1871:

	Entered. Number.	Tons.	Cleared. Number.	Tons.
American vessels	10,198	3,572,402	10,360	3,629,695
Foreign vessels	12,834	5,696,894	12,721	5,615,760
Total	22,332	9,269,296	22,081	9,245,565

TWELVE MONTHS ENDED JANUARY 31, 1870.

	Entered. Number	Tons.	Cleared. Number.	Tons.
American vessels	10,339	3,478,639	10,149	3,499,330
Foreign vessels	12,695	5,727,914	12,487	5,728,118
Total	23,161	9,205,953	22,636	9,227,437

The report contains the statistics of the foreign trade of Cuba and the Sandwich Islands; also of the Netherlands, by principal articles, from 1866 to 1870, and of the foreign and coastwise trade of Spain from 1865 to 1867, compiled from the latest official returns received.

THE ART OF DINNING.

The following sensible advice in the art of dining is from the pen of Prof. Blot:

"The mind has its diseases as well as the body, and I think vegetarianism is one of them. It is by practical experience that we learn what food is proper for us, and not by chemical analysis. Every thing we eat, with the exception of salt, can be turned into charcoal; yet who can live on charcoal? An experiment has been made by the great chemist, Magendie. He fed geese on gum only and they died on the 10th day; he fed some upon starch only, and they died the 24th day; he fed others on boiled white of eggs, and they died on th 28th day; he fed others on the three kinds mixed together and they fattened instead of dying. So we must vary our food as much as possible in order to supply the waste of every part of our system. In cooking vegetables, green vegetables, such as cabbage, spinach, etc., should be put into water at its first boiling, with salt. Dry vegetables, like beans, peas, etc., should be put over the fire in cold, soft water, after having been soaked in lukewarm water—beans for twenty-four hours. Potatoes should be steamed but never boiled. Steam with the skin on. Bear in mind that a potato must never be pealed; the part immediately under the skin contains the most nutriment. Cut out the eyes or germs if any; if young and tender, the skin can be taken off with a scrubbing brush; if old, scrape the skin off and then roast them. In selecting the potato, remember the smaller the eye the better the potato. By cutting a piece from the thickest end, you can tell whether they are sound. They must be either white or pink, according to the kind. Always select beans without spots. Milk and eggs partake of the nature of animal as well as vegetable food. Fish is less nutritious than meat, containing only 20 per cent. of nutritious matter, ought to be partook of at least twice a week. It contains more phosphorous matter than any other food, and is very good to supply the waste of our system, especially of the brain. The brain of an idiot contains about one per cent of phosphoric matter, while that of person of sound intellect contains from two to two and a half per cent. The brain of a maniac contains three and a half per cent. We need not fear, however, of losing our senses from eating to much fish. It supplies the waste, but does not augment the proportion of the phosphoric matter."

The chemistry of the matter might, perhaps, be stated with more precision. For instance, instead of saying that everything we eat may be turned into charcoal, it would be more accurate to say that carbon, being the one solid of the four organic elements, the others may be driven off by heat, leaving the carbon behind in the form of charcoal.

It should always be borne in mind that there is an unending, active competition now in farming as in every other pursuit, and he who would be successful must be on the lookout to secure all the assistance he can procure, all the advantages that science, inventive genius, and research can offer, to make his labor profitable and to enhance the fertility of his land.

CHEAP INSURANCE

AND ITS CONSEQUENCES.

[*From the Chicago Evening Post, Feb. 16, 1870.*]

A few days ago *The Post* made some remarks on the dangers threatening the insurance interests of the country—urging the public, as a matter of self-interest, not to let the idea of *cheap* insurance be the only one in view, but to endeavor to bestow it in such a manner as will support the reliable companies of the country. The public have for some years had the idea that insurance, like other patronage should be bestowed where it will involve the least outlay—and agents, bidding for patronage, have advertised to write policies *cheaper* than others. Of course, irresponsible companies could afford to write policies at much cheaper rates than sound companies, because they do not and have not given absolute indemnity. If they have paid loses, it has been because of the accidents circumstance that, at the time, it seemed to the managers to be to *their* interest to pay; and the other accident, that the company had funds with which to pay. Companies started without capital, trusting to some accidental incident of business to earn a capital, and feeling that if such could not be done, its managers could at least get their hands on sufficient money to compensate them for the wear and tear of conscience and loss of time—companies organized and conducted on this basis, having everything to gain and nothing to lose, could, of course, afford to take risks at whatever rates were offered—while sound companies, with *bona fide* capital, could not compete without almost certain loss. The public, searching after what was *cheap*, and never considering that an insurance *cheap*, at the time of its execution, may be *cheaper yet* in case of a loss by fire, have given these irresponsible companies an encouragement so strong as to compel the sound companies to come down to their rates. As a result, the capital of many of the most responsible companies has been very materially reduced, and they have been placed in a condition where a year or two more of competition, under the cheap "cut" rates of irresponsible companies, will wind up—so says Superintendent Miller, of the New York Insurance Department—half the responsible companies in this country. And we are hastening to a day, if the delusion of *cheap* insurance is not exposed, when, no matter what rates a merchant may pay, he cannot find enough insurance companies in the country whose policies he knows will be paid, to cover a moderate stock of goods. Such a state of affairs, it is hoped, will never prevail, but can only be averted by strangling these "Cheap Johns" in insurance and patronizing companies known to be sound, at rates known to be safe and reasonable to the companies, regardless of the terms offered by the Peter Funks.

Since the remarks made by *The Post*, the other day we have received a copy of the Hartford *Post*, February 6th, which contains an article on the same subject, with statistics showing the disastrous effects of the competition with the cheap rates on the sound companies of the country. The article contains so many valuable facts, that we transfer it to our columns entire. It is as follows:

"Though it has often been repeated, that the year 1870 was a most disastrous one for the Fire Insurance Companies, we think the following figures will surprise all. Those who complain of exhorbitant rates, and clamor for a reduction would do well to read and ponder. We believe it to be for the public interest, and cheaper for them in the end, to assist and sustain our best companies in the maintenance of fair rates—and not to nurse into a brief life weak and unreliable companies, for a small saving in premium. When our wealthiest merchants, largely interested, and even directors in insurance companies, remove their business from our oldest and best companies, for a petty difference in premium of one dollar on a $5,000 policy, we must believe that for such failures as the "Home," the insuring public themselves are more or less responsible, for in too many cases they act without knowledge of the actual condition of companies, but take for gospel whatever an agent tells them, who offers to insure at a low rate, looking more to low rates than companies' high standing. As a consequence, a large majority of insurance companies have been, and still are, selling their wares below cost. Is this true policy for the assured? Superintendent Miller, of the New York Insurance Department, is reported as having said, that a year or two more would wind up one-half the companies in the country. These figures, at least, furnish good foundation for such a prediction.

"From the advance copy of the *Spectator's* chart, compiled from the official returns, showing the standing of all the companies doing business in the State of New York, we find on comparing the net surpluses with the returns one year ago, that out of 141 companies, 86 show a loss amounting in the aggregate to the enormous sum of $2,565,000, some of which is, of course, attributable to shrinkage in assets.

All the foregoing applies equally to California, and it is very necessary that parties seeking actual protection by insurance should look well to the character and ability of Companies. The best is always the *cheapest*.

"*The following table shows the loss in the net surplus as compared with last year, of some of the leading New York Companies:*

Ætna	$45,000
Buffalo Fire & Marine	55,000
Commerce, Albany	11,000
Fulton	12,000
Home, of New York	74,000
Market	74,000
North America	42,000

"*Companies showing a gain:*

Hartford	$110,000
Merchants'	7,000
Connecticut	36,000

"*Thus out of 141 companies only eleven companies have shown a gain in surplus.*"

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OUR OIL CAKE MEAL, which we are now manufacturing, a description of feed so greatly promotes the health of stock as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or who are growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it this country, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of food, viz: Oil Cake Meal, 14 per cent; Barley Meal, 13 per cent; Oat Meal, 12 per cent; Corn Meal, 11 per cent; Rye Meal, 10 per cent; Wheat Meal, 8 per cent; Oil Cake Meal, 21 3-100 per cent. For life-sustaining properties to all stock against cold weather or over-driving it has no equal.

For MILCH COWS it is particularly valuable, increasing the quantity of milk and greatly improving its quality to a far greater extent than any feed known. A suitable quantity for the cow at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other feed, but generally mixed with the mash of bran slops, roots, or other feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—has fed always better, more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($35 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, and at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on the coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

TRUE'S
IMPROVED
POTATO PLANTER

This is, undoubtedly, one of the most valuable machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of Ten Men in Planting Time.

Makes its own furrow, cuts the potato in such slices as the farmer may prefer; drops those pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over the ground that can be plowed.

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse, plant six acres of potatoes in a day, is of inestimable value; because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attention to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune.

Particulars and Catalogues can be had at our office.

AGENTS a salary of $35 per week, or allow a large commission to sell our new inventions. Address J. W. Fralick & Co., Marshall, Mich.

Horticulture.

THE WINE CROP IN FRANCE.

We give a Letter from a distinguished Wineman from the Burgundy District in France, to show the condition of the Vine there, as our own Vineyardists are all, more or less, affected thereby. This Letter appeared in the *Wine and Fruit Reporter* of New York.—Ed. F.]

The condition of the vine, in France, is far from improving. What I formerly reported concerning the ill results of winter, is at present rather increased than diminished, at least in Burgundy. The young vines which, thanks to their low stature, were entirely covered by the fall of snow which protected them, have not suffered at all; it may even be said that they are in a satisfactory condition. Their vegetation is fine, and far advanced for the season; they already show numbers of grapes. But the proportion of young vines thus preserved, does not exceed an eighth part of the whole number of vines in Burgundy; and all the other vines, of various ages and heights, are so shockingly damaged that the crop to be derived from them is to be regarded as amounting to nothing. Supposing the atmospheric conditions on which the success of the vintner depends to remain entirely favorable down to the vintage, our region of country will not supply him one fourth or one fifth of his ordinary income.

The description of suffering to which the cold has subjected the vine this year, is singular enough to be noticed. The wood is intact; the bark alone is, or rather the several barks are, damaged. When carefully removed with the pruning hook these backs are found to be black instead of green; nor do they contain the smallest trace of sap; if at the same spot, the underlying wood is cut, the sap instantly escapes, and falls to the ground drop by drop. Vegetable physiology gives a simple and rational explanation of this phenomenon. As is well known, the sap, drawn in by the tendrills of the roots, travels up the medulary canal and the fibres of the wood, reaches the shoots and enters the leaves which it expands as it seeks its reunion with the air; thence, redescending by the bark to secrete itself in the soil. This year the roots are sound, as is the wood, and their functions are performed in the regular way; but the bark is morbid; its channels are dry and obstructed, and will not permit the sap to descend, and the circulation ceases. Hence this abundance of sap at the heart of the stem, while not a shoot, nor the least trace of vegetations is to be detected in its limb. Nothing is so sad as to see an old vine beside a young one. In the latter is beheld all the luxuriance of super abundant vegetation, that soft verdure which gladdens the eye and relieves the delicate and brilliant shadings of the young leaves, and of the tendrills, in the other nothing but great twisted black arms, which appear to writhe in the agonies of death. Scarce a few feeble buds spring from the stem near the earth where the snow yields its kindly shelter; but of course they do not bear a single fruit.

I am speaking of Burgundy alone, and particularly of the southermost part of it, where I live. I know that La Provence has suffered little from the cold of winter; if the weather is favorable to its vineyards, it may have a good average crop. I should add that for a week the cold is again sharp that hoar frost is apprehended, and that a brisk north wind, added to the entire absence of spring rains, is already an unfavorable symptom, although the vines have not as yet suffered perceptibly from it. But after suffering so much we are afraid of every wind that blows.

The prices of wine are going up rapidly, particularly those of ordinary wines, which have doubled in three months. This is the more surprising as our deplorable civil war has suspended all transactions already in negotiation, so that very few sales of wines have been made. It may be inferred from this fact with certainty that high figures will be reached as soon as Paris shall have been reclaimed, by kindness or force, to reason and duty. Alas! Where will its criminal folly end? And when this last scourge shall cease to wound, will there yet be time to repair our hurts, and will we be able to do it?

NATIONAL POMOLOGICAL SOCIETY.

This truly distinguished Society of Horticulture, of which the Hon. M. P. Wilder is the President, and which is composed of the best and most influential and scientific Horticulturists and Florists in the land, will hold their next annual meeting and exhibition of Fruits at Richmond, Virginia, in September, beginning on the 6th, and lasting three days.

It is hoped that there will be a representation of California Fruit there to speak for our State.

Every aid, attention and courtesy, will be shown to all Delegates and Contributors.

In May, 1870, about a month before his death, Charles Dickens wrote to the biographer of Macaulay, thus "A few years ago I destroyed an immense correspondence, expressly because I considered it had been held with me, and not with the public, and because I could not answer for its privacy being respected when I should be dead. I have since allowed no letters from friends to accumulate in my possession."

It may not be generally known that editors get one important item of subsistence at a low price—they get *bored* for nothing.

THE MECHANICS' FAIR.

CIRCULAR.

The Board of Managers of the Eighth Industrial Exhibition of the Mechanics' Institute, with a view to promote the study of Drawing in the public day and evening Schools of California, herewith offer the following Premiums, to be awarded at the close of the Exhibition, to the classes and ages as annexed:

Class 1.—Mechanical Drawings and Designs.
Class 2.—Architectural Drawings and Designs.
Class 3.—Landscape Drawing.
Class 4.—Marine Drawing
Class 5.—Still Life Drawing.
Class 6.—Maps.

The pupils competing will be divided into three grades, ages being as follows:

SEX.	GRADE A.	GRADE B.	GRADE C.
Girls.	16 to 14 years	14 to 12 years.	12 yrs and und.
Boys.	18 to 16 years	16 to 14 years.	14 yrs and und

There will be a first and second Premium awarded to each class and grade, or thirty-six premiums in all; the first premium being a *Silver Medal*, and the second premium a *Bronze Medal*.

No male pupil over 18 years of age, or female pupil over 16 years of age, will be permitted to compete.

The classification does not include Oil or Water Colors.

All schools desiring to compete, must give notice through the Principal to the Board of Managers, before the 25th day of July next, and the Drawing must be placed in position before Tuesday, August 8th, at 11 o'clock, A. M.

EVENING PUBLIC SCHOOLS FOR DRAWING.

The following Premiums will be awarded by the Mechanics' Institute to regular attendants of the Evening Public Schools for Drawing:

Sweepstake Premium—Best Architectural or Mechanical Drawing, either a design or from a model, but not a copy of a drawing,—a set of Drawing Instruments, (of the value of seventy-five dollars,) to which is added by the President of the Mechanics' Institute, Fifty Dollars, coin.

Premium for best Mechanical Drawing—Silver Medal.

Premium for best Architectural Drawing—Silver Medal.

Premium for second best Mechanical Drawing—Bronze Medal.

Premium for second best Architectural Drawing—Bronze Medal.

The competitor who carries off the Sweepstake Premium is not eligible to compete for any further premium.

Notice of intention to compete must be made through the Principal or Drawing Master of the class, before the 25th day of July next and the Drawings must be placed in position before 11 o'clock, A. M., Tuesday, August 8th.

A. S. Hallidie, President.

NEW ZEALAND FAX.

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders shall be as explicit as possible as to the kind wanted—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

We particularly call attention to the

New Agricultural Implements

which we announce in our columns several of which we have the exclusive sale for this Coast.

THE POTATOE PLANTER,
JEBB'S PATENT CHURN,
CHEESE CURD CUTTER
PATENT WEEDING HOE,
LIFTING HAY FORK,

WITH OTHER VALUABLE IMPLEMENTS.

Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

TREE SEEDS

OF ALL THE VALUABLE KINDS.

Also,

TOBACCO SEED.
COTTON SEED.
COFFEE SEED.
TEA SEED.

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER, Fruit and Ornamental Seeds.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference.

FLOWERING BULBS.

RARE AND HOICE KINDS

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown

Please remember that Lawns can be made so as to be perfect at any season of the year.

FINEST MIXED LAWN GRASSES,
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

EVERGREEN AND DECIDUOUS SHRUBS,
ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

ORANGES, LEMONS, FIGS,

Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries

PERPETUAL FLOWERING ROSES

Of the best kind

GREENHOUSE AND BEDDING PLANTS.

These are grown at our residence under our own care where they always can be selected.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

WARREN & CO.

Farmers' Headquarters, 320 Clay Street, up-stairs.

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING, JUNE 22, 1871.

THE CALIFORNIA FARMER READING ROOM AND MUSEUM OF NATURAL HISTORY.

220 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* of our *Journal*, to which we would direct their *special* attention.]

CLOSE OF ANOTHER VOLUME.

With this number we finish another Volume, our THIRTY-FIFTH, and agreeable to our custom, we take our Week Holiday, and this gives us *rest*, and the preparatory for the enjoyment of the coming Glorious FOURTH OF JULY.

During our vacation and rest we anticipates calling on many of our kind Patrons, and catching by our respite from labor and toil a Free breath of air.

Our No. 1, of NEW VOLUME THIRTY-SIX will appear on the 5th of July and we design some Improvements and Illustrations, with several valuable Letters received especially for that number. In the mean time we return our sincere thanks to our many kind Patrons for long years of kindness, and hope to walk with them and commune with them many years to come

HON. HORACE CAPRON TO VISIT CALIFORNIA.

We are happy to know by letters received, that the Hon. Horace Capron, the Commissioner of the Agricultural Bureau at Washington, will pay the Pacific Coast a visit this Summer, and be with us during the season of our Public Exhibitions.

We hope the friends of agriculture will take measures to do honor to the Official Head of the Agricultural Cause in our country.

SANTA CLARA COLLEGE.

This distinguished College commences its *Twenty-First* Collegiate year August 7th, and no College on our Coast possesses so large, complete, and variable a Library and Cabinet, or such extensive Philosophical Apparatus, with means of Study in all departments of science or even the Artistic and Mechanical Sciences at this College; in fact the Philosophical apparatus is larger and more valuable than even Harvard University.

The number of Pupils is 225, and steadily increasing.

The number of Professors is 25, besides the President, all devoted by Love to their work. This College is very prosperous.

THE MECHANICS' FAIR.

The interest manifested by the President and Directors of the Mechanics' Fair to give a just encouragement to young Draughtsmen, Architects and artists generally, has induced us to give publication in full to their Two CIRCULARS, to which we call special attention, and hope our young artists, and all our young APPRENTICES will take notice, *Improve this opportunity* and win the prizes.

ILLUMINATIONS FOR THE FOURTH.

A. Giorgiani has this year made a great effort to have a Superior Lot of Fire Works for the Fourth of July, and our citizens should be sure to purchase of him our own Home made Fire Works.

Mr. G. can also supply the Table with delicious Fruits. See advertisement.

OIL CAKE TO ENGLAND.

The value of Oil Cake Meal as feed, of which we have spoken, is now being better appreciated here, but England consumes it in vast quantities. The Linseed Oil Mills of this city shipped the last year about 250 Tons to England, realizing much higher rates than is sold for here.

PAY UP.

As our Register shows a very respectably long list of Subscribers measuring *only a few miles*, we notice there are some *mile stones*, marked *not paid*.

Now we would most kindly say to our Patrons, who know they are indebted to this office, and have omitted the important duty, that we will be very grateful if they will only help us to *enjoy the coming* FOURTH OF JULY, and in no way can they do this more effectually than by sending in the amount due this office promptly.

THE NATION'S INDEPENDENCE.

We are now near to our "NATAL DAY," and we are glad to see that due preparations are being made for it in our City, in our State, and over our whole Country

MILLIONS Celebrate the day now, that less than a century ago was hailed but by a small band of Patriots, but let the day be remembered and kept as a holyday, one that is connected with the Liberty of the World.

We place on our Front page a portion of the "Farewell Address" of the FATHER OF HIS COUNTRY as most fitting to be read at this time. It is not as familiar as it should be to the Sons and Daughters of the Siggers of the Declaration. We place selected portions of it before our readers now, as we shall soon be called upon to elect a Chief Magistrate for the Nation, and also a Chief Magistrate for our State, let the last words, the Benediction of the IMMORTAL WASHINGTON prompt every man who wields a vote, to bear in mind the value of the Inheritance bequeathed to him by Washington and the Patriots of the Revolution, an Inheritance sealed with their Blood, and priceless to mankind.

CROPS, SEASON, PROSPECTS.

To a careful observer of the events daily transpiring and of the business which is done when the incoming harvest of a season begins to move, no other proof need be had to show that California will show not only a fair crop, but a very satisfactory one.

Was the harvest short, was there a possibility of a scarcity of grain, speculators would be scouring the country and securing all within their reach, but the dullness in the market, the fall in price, are the evidences of a larger harvest than was anticipated, and a certainty of lower rates, and thus purchasers hold back till clear results of the crops are manifest.

There can be no doubt of a good general crop, far larger than was believed, and only those who were well posted could form a good judgment of. See note of value under Market Rates.

From every quarter comes cheering news of good harvests in every department, not only in Grain, but the Wool clip has been very large and sold at high rates also.

The Vineyards promise very abundantly, and the presses this year will, as the Good Book says, "Gush out with new Wine," while our Orchards are bending with overloaded crops.

The Harvests this year will show a greater variety of crops, and to a large amount, which will add a considerable amount to our Export trade; for not only shall we export Grain, Wool and Wine, and Oil, and Oil Cake, but we shall export, to a generous sum, Hops, Mustard Seed, Peanuts, Beans; and also in manufactures, Leather, and the Raw Hides, Tallow, Horns, &c., so that we feel confident our sum total of *Exports* will balance all our *Imports*, and leave us a margin of Gold in our favor.

Our markets show the excellence of our Fruit Crops. Already the luscious Fig and Peach are added to our list of fruits now in market. The crop of these will be large. We are also supplied now with the Red Astracan Apple, as an early apple, while all the small fruits are now abundant and cheap, never cheaper than now.

The Gardens of the Alhambra of Dr. Strenzel send the glossy Black Tartareans, and the noble Biggereaus; the finest cherries sent to this market come from these famous Orchards, whence also come Peaches, Pears, Apples, Pomegranates, Oranges, Lemons, Figs, and Grapes of rare excellence, and "Wine, that maketh the heart glad."

We see no cause to complain of our California Harvests this year, but on the contrary, great cause of congratulation, and of *Gratitude* and *Thanksgiving* for the ABUNDANCE that will crown the year with PLENTY.

SUMMER PLANTING.

Many persons suppose, yes, the great majority think, that it is now out of season to plant any thing, yet the very reverse is the case. We have summer *heat*, and we can give *moisture*, and *heat* and *moisture* are the moving powers for vegetative life.

It is true that greater care is now required to start and to perfect plants or seeds, but nothing is worth doing that is not worthy of care.

In our high mountain valleys the Gardens in many places are *now* being planted, and in the region of the new irrigating companies where the soil has been thoroughly softened, experiments are being made very successfully with late summer crops of vegetables.

Stepping into the Seed Store of C. L. Kellogg, on Sansome street, we noticed he had orders from Visalia and that region for seeds for Summer planting, and in many places along the line of the Irrigating Canal from Stockton; efforts will be made to grow good Summer crops of Vegetables, Melons, Corn, &c. This can be done successfully, as the soil will be put into a *fine, mouse* condition. It is, however, all important that at this season the surface soil should be kept from baking by a constant cultivation so as to keep the soil porous.

Mr. Kellogg can furnish Seeds to the satisfaction of his patrons. See his card in our columns.

DON'T FORGET THE MULCHING.

The warm, yes, the hot July weather, is coming, and the garden grounds will suffer unless cared for, and cared for well, and the true way, the true protection for the Garden is mulching.

We have urged this subject for years, and we are glad to see it is being adopted in many places with great satisfaction to those who try it, and benefit to the Trees, Plants, and Shrubs that mulching keeps in a healthy growth.

We copy an article on this subject from the well known Horticulturalist, P. T. Quinn, Esq., of New York. It will be found on 186th page, under the agricultural head.

GUBERNATORIAL.

"SUBSIDY OR NO SUBSIDY."

It is said in Military Tactics, that those who stand apart at a distance or upon an eminence can always see how the battle goes, and quickly tell which army will be victorious in the strife before them.

And thus, we stand apart upon an eminence to view the present Political struggle in the coming contest for the Chief Magistrate of our commonwealth, and our eminence is an INDEPENDENT GROUND; not that we have no preference, but that we are INDEPENDENT TO SPEAK upon a subject that vitally affects all the INDUSTRIAL interests of our State.

We believe *false issues* have been raised for Party purposes, and we see cause of alarm, for there is great danger hanging over the Industry of our State in this question of "No Subsidy."

Why was this question raised? was it to protect the People from too heavy Taxation? No! Was it to prevent the waste of our Public Lands? No! Was it because it was a legal or moral wrong to grant aid to Railroads that open up a new country? No!

This question was raised, in our humble opinion, for a personal and party purpose, and has been agitated and fomented until a candidate was found whose character and standing was so high as to give it the appearance of some great interest for which the people demanded a reform.

No Subsidy in California, simply means opposition to the Central Pacific Railroad Managers, and nothing else; and the origin of this cry of No Subsidy! was from the "Sacramento Union," and its personal hatred of that mighty enterprise which has built a Great Highway that makes California the grand *Entrepot* of a world's commerce.

No Subsidy? What is a Subsidy? The great Lexicographer says, a *Subsidy* means Support, Aid, Co-operation, *and rendered to a friendly power*, and what man in his senses will not say the Pacific Railroad has not been a FRIENDLY POWER TO OUR STATE?

What would California be without Railroads now to compete with the world? This State must have Railroads and other great Improvements, Schools, Colleges, Churches, Bridges, Asylums, &c., and shall none of these have a Friendly aid from our State Government?

To make this question a "Sine qua non" in the election of a Chief Magistrate, would be to strike a DEATH BLOW to all progress, for every Public Improvement must have a *friendly aid*, and this is Subsidy.

The source whence this cry of "No Subsidy" comes makes it clear that it does not come with a sincere purpose and for the highest good of the State. Let us see!

A Lottery was granted to the Mercantile Library as a *Friendly aid*, a Subsidy from the Legislature. Statutes against this species of *Gambling* were repealed, and a Subsidy granted.

What does the Sacramento Union do then? it advertised it; took the price of advertisement, and when the wrong (which has not ceased) was done, uttered this strong anathema against Lotteries—(which are Subsidies):

"Governor Haight did a most popular act when he vetoed the mammoth railroad subsidy scheme, but a most popular and unconstitution one when he declined to veto the infamous lottery bill, the consequences resulting from the passage of which has done more to demoralize the moral sentiment of the State, to say nothing of its influence in a pecuniary way, than any public act within our recollection. He committed a most fearful mistake. We denounced the bill at the time, and predicted the sad results."

And now the Sacramento Union comes out boldly against Subsidies, and would control our State by its own *Gubernatorial Candidate*, while its pages contain upon the front, boldly, *Eight Lotteries*, asking *Five Millions of Dollars* of the People's money.

Beautiful Consistency! Glorious Sincerity!! Noble Philanthrophy!!!

Let every reflecting citizen of our State ask themselves, which is the better Subsidy, to build Railroads, and open up our State to immigration that shall cover its waste places with Happy Homes and fertile fields, and by which improvements, five dollars for one shall be returned to the State or County Treasuries that give a "Friendly aid," or to flood our State with *Lotteries* that make Gamblers of the people, and destroys all disposition to improvements, and thus ruin our State.

If the Sacramento Union would advocate the "No Subsidy" doctrine, let it first pull down their "Lottery Flags," which are the Black Flags of Subsidies, then it may with more consistency advocate its present cause.

Most fortunate is it, as we said last week, that California has now before the people, as candidates for Governor at the coming contest, three men of Unblemished Record, men of worth, either of whom would rule our State with Credit and Honor, and no Governor can please all parties, nor should he expect to do so.

And now a word to Voters. There can be but two candidates regularly nominated, one for each party, Democratic and Republican.

Governor Haight has made truly a good Governor, though not pleased everybody—one sign of a good Governor.

Mayor Selby and Mr. Booth are candidates for the Republicans. Both these gentlemen stand high, both honorable and talented men.

Mr Booth is the anti-Subsidy candidate This means *no aid to Railroads*, or Public Works.

Mayor Selby stands unpledged like the former noble candidate for Governor, Hon. John Bidwell and in our opinion the result with the Republicans will be the same. We have some knowledge of our State and the "Bone and Sinew" of the State. No Subsidy means, stop all public improvements, stop Railroad enterprises, compel Farmers to team their grain and produce to market, let thousands of working-men want labor, hinder the opening up of waste lands, and let the State stand still.

This is a partizan scheme, and there is something the people do not understand—and the result we have the vanity to believe *we can see now*, and it is this: It is a blind, this anti-Subsidy cry. If Mr. Booth is nominated, all the "Railroad" interest everywhere, and their influence is powerful, will be thrown for Governor Haight, and the Republicans *will be beaten*. But if wisdom prevails and Mayor Selby is elected, the Republicans win, and an Independent man will rule our State who will only approve such aid to such enterprises as shall tend to build up our State, and men of all parties will hail his election with joy, for Mayor Selby is a man of character, wealth, and great influence, and has done, and is doing now, very much for the working-men and the Industrial Interests of our State, and his own character is a guarantee that our State and its highest interests will be the chief aim of his ambition. He has done nobly as Mayor and will do nobly as a Governor, and our Farming population must have Railroads and other public improvements, and if "No Subsidy" rules, then no grants to Schools, Colleges, Agricultural Societies, Mechanics' Institutes, Orphan Asylums, &c., and farewell to the Industrial progress of our State.

EATING TO LIVE.

In our last issue we gave some articles on eating and drinking, from Hall's "Journal of Health." In this article we design to speak of the daily matter of eating as is practiced among the great masses, and the sad mistake that is made in this matter of partaking our daily meals.

Hotels and Boarding Houses are very numerous and Restaurants are plenty, such as they are, but very few of our common Boarding Houses, or our Restaurants, are places where a person can "Eat to Live;" they may *Eat to fill up*, and that is a common every day affair, but to Eat to Live is quite another thing.

It is a well established fact in Physiological Science that the Brain has a quick sympathy with the Stomach, and when persons sit down to eat, what they see, smell and taste go in sympathy quickly to the brain, and thus if the food is badly cooked, the table or dishes unclean, or those who wait on table are unpleasant or uncourteous, the mind of the eater is affected, the brain rebels through the stomach, and the will power rejects what is set before them, and though they may eat, the food does not relish nor set well on the stomach, nor will it digest, and the result is *indigestion*, Dyspepsia, bad blood, and a sour disposition, and this unfits the eater for any and all the duties of life, and a fearful penalty is paid by any one who sits down to a table to eat where *all* the surroundings are not congenial, pleasant, and also agreeable to the taste and to the mind.

Great numbers of persons go into a Restaurant to eat because it is *cheap*, many because it is convenient, and a saving of *time*, yet in each case, these persons do not *Eat to live*, they eat mechanically, and wonder that they do not *relish their food*

It is also too true that many persons have so debased their stomachs and are of so gross a habit that the Stomach has almost become like the receptacle of cast-away food, that is destined for the lower order of animals, and when food does not exactly please, the addition of Brandy, Whisky, or Tobacco, stupifies the delicate nerves of the Stomach that were rebelling against bad treatment of its delicate organs, and for a while they are silent, but a constant repetition of this *crime against nature* cannot always go unpunished, and sooner or later there is recorded, "Sudden Death" by Liver complaint, or Heart disease, or Apoplexy, when the real truth is, the violated organs of the Stomach refused to make blood, and this failed to give due action and strength to the movements of the powers of the body, and the *machinery failed* to go on, and Sudden Death was the Penalty paid for not "*Eating to Live.*"

The *place* where we eat; the *Food* we put into our Stomach; the *manner* in which it is *prepared*; the *preparation* of the *table* and its *surroundings*, the *condition* of the *mind* when we eat; the *haste* with which food is swallowed and the want of a proper mastication of the food, these are all important, very important considerations, to the *vital duty* every person owes to themselves in the preservation of the body, so as to enable them to perform every duty of life promptly, earnestly and faithfully, for it is an admitted fact that a vast number of sudden deaths, quarrels, and much unhappiness in life arises from the very cause of which we are discussing, the *manner of Eating*.

It is not necessary to cite the many cases of broken up families caused entirely by *bad food*, making *bad blood*, but the waste and extravagance resulting from a want of knowledge how to prepare the food, how to set a table, and how to make those pleasant surroundings that give a sunshine to all who come to the table, a zest to the food set before them, and thus induce smiles, joy, and a pleasant conversation that gives action and power to the brain to go on to its proper work of digesting the food, and thus show that *this* is "Eating to Live."

We read of murders, suicides and sudden deaths by wholesale almost every day—and we believe there is no greater promoter of all these calamities than the way in which a great mass of the people partake of their food; cheap eating may be a necessity sometimes, but it is a *slow poison*. It would be found so if one could go to the kitchen where that food is prepared; it may read well in the Bill of Fare, but it really needs the bribe of a dish of Ice Cream to all who spend *twenty-five cents* to make it *go down*.

LAND GRANTS TO PUBLIC ENTERPRISES.

SUBSIDIES, OR FRIENDLY AIDS.

Now that our State is to pass through a Political battle for a Chief Magistrate, and as the war cry is No Subsidy, we have placed in our columns a portion of the very able and *unanswerable* speech of Hon. Chas. Pomeroy, of Iowa, delivered in the House of Representatives, Feb. 2d, who was the advocate of Subsidies for Public Roads and other Public Enterprises.

It is urged as an objection to these grants that it is a waste of the nation's resources. But that cannot be a resource, in the sense in which it is presented, from which no revenue is derived; and we were told by the first Secretary of the Interior under Mr. Lincoln that the public lands had ceased to yield a revenue to the Government. Though this is not strictly true now, it would be so but for the extension of roads by means of these grants to open these lands up to settlement and cultivation. It was true when made, and was made at a time when there was an entire prostration of western railroad enterprises, and even large subsidies of lands that were freely given were not sufficiently valuable to insure their immediate completion.

* * * * *

The land-grant system was inaugurated over forty years ago, and though sometimes shamefully abused, has been continued under Democrat, Whig and Republican administrations. In making these grants the Government gives one-half the lands within certain prescribed limits and doubles the selling price for the other half, thus realizing for the one half retained as much as without this road it would have received for the whole. There is no loss of property in this transaction, and instead of being a charity bestowed upon some scheming, pertinacious beggar, it partakes more of the character of the transaction of a shrewd operator who has bargained one-half of his profitless estate in consideration of the erection of certain improvements thereon that will enable him to realize speedily for the other half all or more than he had asked and could not obtain for the whole.

* * * * *

It is true that it would be very desirable to have these roads built without absorbing a portion of the lands, if such an end could be attached; but capitalists do not invest their money where there is no prospect of returning profits, and railways will not pay dividends when built through countries destitute of population and connecting no great commercial terminal points. It is true that their completion will bring inhabitants to the country and consequent traffic to the road; but we have no right to expect that railroad companies will act as great public benefactors solely, and magnanimously develop and improve the national resources, leaving their posterity to reap an uncertain and tardy income from their investments. The settler, in most instances, would feel himself exceedingly fortunate to be enabled to divide his land equally with a company that would build a railroad near or through it, if that alone would insure the completion of a road within a reasonable distance from his home.

Is a policy that would enrich individuals unsafe or wasteful for the Government? It is not the gift of the odd-numbered sections, on which there have been no improvements, made to the country honestly builds its road, through the lands donated for that purpose that stirs the anger of the emigrant in search of a home; but it is the gift of lands to States and corporations for real or pretended improvements in distant localities, or lands which have been obtained without any equivalent having been rendered, the disposal of lands on which the settlers had already built his home, or the absorption of both the odd and even-numbered sections by speculators under those laws which seem to have been framed solely in their interest, the swamp land and college grants. Scrip under these acts is issued in large quantities from the General Land Office, thrown upon the market, bought upon a low price, and located in tracts of thousands of acres, embracing all the vacant lands in whole townships; and the holders, impelled by no obligation or interest aside from the value of the land, will only sell when the full demands of their avarice are satisfied.

Some of these men who have become enriched by dealing in vacant lands are now among the most determined and noisy opponents of monopolies, and earnest advocates of the rights of the poor settlers. Their change of feelings would assume an appearance of touching and gratifying sincerity, if the remembrance of former misdeeds should force them to imitate one of their erring and repenting brothers of old, and would also furnished evidence that, like poor Judas, they were not destitute of consciences.

* * * * *

It was but a few years ago that our school geographies described the Missouri territory embracing eight hundred thousand square miles, as a "vast wilderness, resembling from the State of Missouri and the river Mississippi to the Rocky mountains; a region of open, elevated plains, generally destitute of forest trees, and interspersed with barren hills." The region between the Missouri river and the mountains was designated on the school maps as the great American desert. The land-grant policy of Congress has settled a part of this "vast wilderness," and the States of Minnesota, Iowa, Nebraska, and Kansas, with a population of two millions, is evidence of its wisdom. This desert yielded in the last year over forty-six million bushels of wheat, and the cash value of all its productions were not less than $130,000,000. And not two per cent. of this wilderness is yet brought under cultivation. When we remember that wheat will not bear transportation over three hundred and fifty miles by wagon, the east to States of the Union will see how much they are indebted to railroads for cheap breadstuffs and many of the necessaries of life.

There is still enough of this barren tract, utterly worthless without railroads, to make ten States as large as New York, and capable of exporting more than five hundred million bushels of wheat

alone annually, and adding to the total agricultural products of the nation more than one-fourth the amount of our national debt yearly. Shall these lands, together with the remainder of our unoccupied territory lying beyond the terminus of existing roads, be abandoned, together with a few brave pioneers who are already there, to the wild beasts and equally wild Indians who are wandering over it, and by whom alone without roads it is inhabitable? To my mind a renunciation on the part of the nation of that wise policy that has encouraged and stimulated these enterprises in which $300,000,000 have been invested within the past year, giving an untold impulse to every form of internal enterprise and industry, is a timid step backward, and an expression of doubt in the superiority of our civilization, of railroads, telegraphs, and universal knowledge over the ancient civilization of dromedaries, camel paths, and general ignorance of the people.

Neither the fear nor envy of the riches of a few should be allowed to frighten or blind us to the great interests of our whole people and of mankind.

THE SOUTH ACT WISELY.

[We copy the following from the *Southern Rural*, showing that our Southern Agricultural Brethren are wide awake to the true interests of Agriculture.—Ed. F.]

The Rural Southerner, Southern Cultivator, Rural Carolinian, and Practical Planter, especially in editorials, and through some at least, of their correspondents, are not only advocating but urging the Southern agriculturist to diversify his crops, both for individual good and prosperity, as well as to develop more fully and profitably the various resources of our Southern climate and soil. I mention these because I regularly read most of them. I suppose all the agricultural journals south of the Potomac (and I think some north of that line), are advocating that policy. For the day has passed when a man is pronounced a *fool* by would-be wise men, who raises more supplies than is actually needed for his own consumption. The time *was*, but no longer is, when a farmer is looked upon as insane, who does not bend all of his energies of every kind, to the neglect of everything else to King Cotton. The staple is no longer worth 25 to 30 cts.—even in greenbacks. But he is fast becoming the prudent, judicious, and successful farmer, who raises a little of almost everything to health and strength of man and beast, and then as much cotton, on as *few* acres, as he can.

HANDSOME FITTING GARMENTS.

SEEING IS BELIEVING.

The *fashions* rule with a powerful sway, and a good fashion, a *good selling Garment* is indeed a most desirable attainment, and especially for a Lady.

Fashions are often *reported* as very beautiful that are not seen or known, and often when obtained causes great disappointment; but of late every fashionable garment can be seen and examined by those that desire them, and among the late inventions none are more advantageous or satisfactory than Butterick's Book of Fashion Plates, showing every new and desirable Garment for Ladies, Misses, and Children, and from this source the *Patterns themselves*, ready to cut and make by, and so simple and plain that any one can use them, and each for the trifling sum of Twenty-five Cents.

Butterick's Book of Fashions is now published Monthly and Quarterly—a valuable periodical for every Family; Magazine and Patterns always found at the agency of the Howe Sewing Machine, by H. A. Deming, 115 Kearny street.

FROM THE SAN JOAQUIN VALLEY.

After all the stories about the failure of the crops in the San Joaquin Valley, the *Argus* of the 10th inst., says:

We observe considerable activity among our farmers in harvesting their crops and notwithstanding the dryness of the season and numerous failures in consequence, those in this immediate vicinity along the line of the foot-hills report a fair yield. Though grain and all kinds of farm produce will bear good prices, yet we think there need be no fears entertained of extreme scarcity or famine rates. Instead of importing this year California will export nearly or quite as much grain of the incoming crop as in any former season, and obtain in foreign markets better prices than have ruled for the past three years.

EXTRAVAGANCE.

A daughter of William M. Tweed of New York, was married one evening last week, to Arthur A. McGinniss a merchant of New Orleans. The ladies will be interested to know that the presents were displayed in the front room on the second story, and occupied the entire four sides. Such a wealth of Bridal presents was never before seen at a metropolitan wedding. They represented over half a million of dollars in value. Lace, turquoises, pearls, diamonds, gold, silver, and many other things of beauty and value, reposed in satin or velvet on every side, vieing with each other in brilliancy and beauty. One diamond set cost $45,000. The bridal dress, with its lace trimming, cost $5,000. Besides this there were fourteen stylish dresses, costing in all $6200.

SHEEP MOVING FOR PASTURE.

Over 10,000 head of Sheep have passed through Sacramento recently from Mariposa and the lower counties for Potah Creek and Humboldt county for better feed. When will our stockmen look ahead and prepare feed for their stock, by prepared grass pastures, Root crops, &c., in case of need.

AURORA BOREALIS.

Stockton and Sacramento have had a vision of the "Northern Lights" the past week. This is in anticipation of the great "Political Light" that will be gathering at the latter city.

THE CONSTRUCTION OF FARMERS HOMES.

We gave in a recent number of our Journal a valuable Essay on this subject, and hope every farmer in our State will carefully consider this subject.

Our farmers' "Homes," the great mass of them, are far from being inviting in their outward appearance; the structure seems to have been erected without any regard to beauty of appearance or practical comfort, often the situation is bad for health, and of inconvenient access to it, or in too open a space, exposed to the sun and winds without a tree or shrub to break the wind or light up its dreary loneliness.

If our farmers in building their Homes would but consult an Architect, the cost of this artist would well repay in the increased value of the building, in case of a sale, and Ornamental trees, and a little Garden around a Farmer's Home would add *twenty-five per cent.* to the real value of such a Home, to say nothing of the Health, comfort and satisfaction the Farmer himself and his family would enjoy by a little forethought and a trifling additional expenditure at first in the preparatory work.

LIFE INSURANCE LAWS.

The Pacific Mutual Life Insurance Company of Sacramento, one of the most successful on this Coast and one of the soundest and best managed, liberal in all its Policies, yet well guarded *so as to be safe*, have lately passed the following rule:

"That from and after the first day of July, 1871, there shall be no loans given on annual Premiums until after *Two full* annual payments have been made."

This is a wise precaution, and Circulars have been sent out to all Insurers and members accordingly, and this is for the good of all.

Henry Ward Beecher says that, when he sees a murder reported in the columns of a newspaper he goes around it, keeping as far off as he would from "a horse two weeks dead in the month of August."

A JUST REBUKE.

Parents and teachers may learn a valuable lesson from a remark once made by the Duke of Gloucester, the third son of the Prince of Wales, father of George III. He was a dull child, and his mother used to cause him great distress at times by jeering him, on account of his dullness, in the presence of his brothers and sisters. On one particular occasion she told them to laugh at the fool. The sensitive child held down his head and said nothing; upon which the princess changed her tone, accused him of sulkiness.

"No," he said, "I was not sulky; I was only thinking."

"And pray what were you thinking of?" inquired the princess, with increasing scorn in her manner.

"I was thinking," said the poor child, "how I should feel if I had a son as unhappy as you make me."

TO THE APPRENTICES OF CALIFORNIA.

The Board of Managers of the Eighth Industrial Exhibition, desiring to encourage and advance the interests of the Mechanical Apprentices, will, at the incoming Exhibition, award Special Prizes for the Best Specimens of Drawing, Designs, Models, or Mechanical Workmanship, and space will be allotted to this special Department.

The class, and value of premiums, to be awarded on the merit of the exhibit, by a Committee appointed by the Board of Managers.

Each exhibit must have attached the name, age and residence of exhibitor; and an application to exhibit in this Department must be accompanied with a voucher from the employer, that the exhibit is the sole work of the exhibitor.

Information will be furnished and applications for space may be made to J. H. Gilmore, Special Agent Eighth Industrial Exhibition, at the rooms of the Mechanics' Institute, 27 Post Street, San Francisco.

A. S. HALLIDIE, President.

W. H. WILLIAMS, Secretary.

MILLS' SEMINARY.

REV. C. T. MILLS AND WIFE, FOR THE PAST six years Principles of the Young Ladies' Seminary at Benicia, are happy to announce to their patrons and friends that the next term of their well-known Institution will open

Wednesday, Aug. 2d,

In their NEW, COMMODIOUS AND BEAUTIFUL BUILDING just completed at

SEMINARY PARK, BROOKLYN,

As most of the able and experienced corps of teachers, with valuable accessions, as well as the fine classes of pupils now pursuing their studies, remove with them, the school remains essentially unchanged.

With greatly increased facilities for physical comfort and intellectual culture, and without additional expense, Mr. and Mrs. Mills believe they can accomplish much more for their pupils in the future, than they have been able to do in the past, and that their Institution offers unrivalled advantages for a thorough and finished education.

All communications relating to admission, and all letters of inquiry, should be addressed to

REV. C. T. MILLS, D. D.,
35.23 Brooklyn, Alameda county, California.

Sheaves of Grain.

As the present Season will offer many interesting and valuable samples of Grain of all kinds, we shall feel greatly indebted to our subscribers, and all interested in our Grain Crop, for Sample Sheaves of Wheat, Barley, Rye and Oats, and any other Samples of this year's products.

We will cheerfully repay them for their kindness and attention, will send them in return choice Seeds to more than the value, and also pay all expenses of transmission per Wells, Fargo & Co.

Cultivators in such cases can command our services for a full reciprocity.

Address, WARREN & CO.,
California Farmer Office,
320 Clay Street, San Francisco.

JAPANESE SILK WORMS EGGS.

One Hundred Cartons of Japanese Silk Worm's Eggs of very superior quality to be sold very reasonable in lots to suit purchasers.

Apply at the FARMER OFFICE,

signed by some of the most

Prominent Physicians:

"We the undersigned, practicing Physicians of San Francisco, having examined and witnessed the operations of

MILLS'

ADJUSTABLE TREADLE

For Sewing Machines, take pleasure in giving our testimony to the great value of the improvement, in a sanitary point of view. The peculiar feature of this new Treadle is that THE FOOT-BOARD IS MADE ADJUSTABLE BOTH VERTICALLY AND LONGITUDINALLY; so that whatever the size or shape of the foot or shoe, THE TRUE CENTRE OF MOTION OF THE FOOT MAY ALWAYS BE BROUGHT TO COINCIDE WITH THE CENTRE OF MOTION OF THE TREADLE, AND HELD THERE, thus permitting the feet to move on their natural centre without having first to overcome the inertia and weight of the heavier limbs.

First—It saves the excessive labor and waste of power consumed in keeping up the rapidly alternating motion of the lower limbs and body, whenever the machine is run with any speed.

Second—It avoids the frequent and serious injury to female health resulting directly from that motion.

By the general adoption of this Treadle we believe the only serious objection to the foot-power sewing machine will be removed, and that so far from being prejudicial to the health of the operator, its use will prove as harmless and positively beneficial as other physical exercise, tending directly to develope the muscles of the calf of the leg, strengthen the ancle, restore the elasticity of the foot, and promote circulation in the extremities."

Physician S. F. Female Hospital, and Professor Diseases of Women and Children in Toland Medical College.

"I have carefully examined the New Treadle attached to the Howe Sewing Machine, and consider it a valuable improvement, doing away with most of the motion of the back and pelvis, which is unavoidable in operating the old style treadle, and which has proven so detrimental to health. I cheerfully recommend it to those who work with Sewing Machines believing it to save them much suffering.

35.14 J. M. MOUSER, M. D."

A NEW ARTICLE.

Composition Pipe for Conducting Water.

THE ATTENTION OF RAILROAD COMPANIES, Farmers, Dairymen and others, is called to our new Pipe for leading water. It is lighter than ordinary lead pipe, and much cheaper than iron, will stand a heavy pressure, and deliver about one-third more water than iron pipe, provided the sizes are the same.

We are now manufacturing all sizes, from one-half to two-inch, and can fill large orders at short notice and put on reels for shipment, the same as lead pipe.

Samples can be seen at our office,

No. 11 California Street.

Home Miscellany.

THE BOWL OF LIBERTY.

Before the fiery sun—
The sun that looked on Greece with cloudless eye,
In the free air, and on the war field won—
Our fathers crowned the Bowl of Liberty.

Amidst the tombs they stood,
The tombs of heroes! with the solemn skies,
And the wide plain around, where patriot blood
Had steeped the soil in hues of sacrifice.

They called the glorious dead,
In the strong faith which brings the viewless nigh,
And poured rich odors o'er their battle bed,
And bade them to their rite of Liberty.

They called them from the shades—
The golden-fruited shades, where minstrels tell
How softer light th'immortal clime pervades,
And music floats o'er meads of asphodel.

Then fast the bright-red wine
Flowed to *their* name who taught the world to die,
And made the land's green turf a living shrine,
Meet for the wreath and Bowl of Liberty.

So the rejoicing earth
Took from her vines again the blood she gave,
And richer flowers to deck the tomb drew birth
From the free soil, thus hallowed to the brave.

We have the battle fields,
The tombs, the names, the blue majestic sky,
We have the founts the purple vintage yields;
—When shall we crown the Bowl of Liberty?

A LEAF FROM LIFE.

I lent my love a book one day;
She brought it back—I laid it by;
'Twas little either had to say—
She was so strange, and I so shy.

But yet we loved indifferent things—
The sprouting buds, the birds in tune
And Time stood still and wreathed his wings
With rosy links from June to June.

For her, what task to dare or do?
What peril tempt? what hardship bear?
But with her—ah! she never knew
My heart, and what was hidden there!

And she, with me so cold and coy,
Seemed like a maid bereft of sense,
But in the crowd all life and joy—
And full of blushful impudence.

She married. Well, a woman needs
A mate, her life and love to share—
And little cares sprang up like weeds,
And played around her elbow chair.

And years rolled by—but I content,
Trimmed my own lamp and kept it bright,
Till age's touch my hair bespraut
With rays and gleams of silver light.

And then, it chanced, I took the book
Which she perused in days gone by;
And as I read such passion shook
My soul—I need not curse or cry.

For here and there her love was writ
In old half-faded pencil signs,
As if she yielded—bit by bit—
Her heart in dots and underlines.

Ah! silver'd fool!—too late you look!
I know it; let me here record
This maxim—*Lend no girl a book*
Unless you read it afterwards.

WOMAN CAN KEEP A SECRET.

Woman can keep secrets—until they want to tell them. In proof whereof is the story of one whom we will call Mary Smith, although that is by no means her real name. When the war broke out the was employed in a farmer's kitchen in Ohio, and her father's family moving to Iowa, she was left there to finish her engagement, and follow them later. She was a large, healthy girl of eighteen, and some strange freak induced her to assume man's apparel and enlist in the army. She performed her duties faithfully, and was so handy in cooking and nursing that she became a general favorite, while no suspicion of her sex was excited. She voted for President in 1864, and was mustered out of the army with her comrades at the close of the war. She then resumed female dress, and procured work in Illinois for six months, until the tan of a five summers' campaign wore off, when she presented herself at her father's house, where she was received with open arms. She, however, refused to inform them of her whereabouts for so many years, only replying to all questions that she had been honestly employed. She had saved some money, which she invested in land in Iowa, which rapidly rose in value. A few months ago a worthy man—who by chance had been, unknown to himself, in the same regiment with her—made her an offer of marriage. Then she thought she should reveal to him her previous life before bestowing her hand. Such a strange tale the would-be husband could scarcely believe, and the lady's family were no less incredulous. But its truth was proved, and in no wise lessened the regard which she had won. The marriage took place about three months ago.

AMONG THE INDIANS.

A RACE FOR LIFE.

[One of those exciting cases of Indian treachery, cruelty and revenge, is told by Mrs. Van Cleve in the Monthly bearing the title of *Everybody*. It is a reminiscence of Fort Snelling of many years ago, but in our present management of the Indians it seem to be likely to last for years, unless we could revive the system of dealing with the "Red Men" as Wm. Penn dealt with them. No treaties were ever broken that were made by him, most unfortunately for our country, that slaughter, murder and revenge takes the place of Mercy and Humanity.—Ed. F.]

"I close my eyes and recall an evening some forty-two years ago, when, in one of the stone houses near Fort Snelling, which, was our house at that time, a pleasant company of officers and their families were spending the evening with my parent. The doors were open, for the weather was warm, and one of the officers, Captain Gruger, was walking on the piazza, when we were all startled by the sound of rapid firing very near us. The Captain rushed into the house much agitated, exclaiming: 'That bullet almost grazed my ear!' What could it mean? were the Indians surrounding us?

"Soon the loud yells and shrieks from the Indian camp near our house made it evident that the treaty of peace, made that afternoon between the Sioux and Chippewas, had ended, as all these treaties did, in treachery and bloodshed. The principal men of the two nations had met at the Indian Agency, and in the presence of Major Taliaferro, their 'White Father,' had made a solemn treaty of peace. In the evening, at the wigwam of the Chippewa chief, they had ratified this treaty by smoking the pipe of peace together; and then, before the smoke of the emblematic pipe had cleared away, the treacherous Sioux had gone out and deliberately fired into the wigwam, killing and wounding several of the unsuspecting inmates. The Chippewas, of course, returned the fire, and this was what had started and broke up the pleasant little party at my father's house.

"The Chippewas sought refuge and protection within the walls of the fort, commanded at that time by Col. Josiah Snelling, from whom it was named. They were kindly cared for. One, a little girl, daughter of the chief, excited much sympathy, and I cannot forget the interest I felt in her, for she was but a year or two older than myself, and it seemed to me so cruel to ruthlessly put out her young life. She lingered but a few days in great agony, and then God took her out of her pain.

"Meanwhile our Colonel, a prompt and efficient officer, demanded of the Sioux the murderers, and in a very few days a body of Sioux were seen advancing towards the fort, as was supposed, to deliver up the criminals. Two companies were sent to meet them and receive the murderers at their hands. Strange to say, although they had the men, they refused to give them up. Our interpreter, I cannot recall his name, stepped out from among our soldiers, and said:

"'If you do not yield up these men peaceably, then as many leaves as are on these trees, and as many blades of grass as you see beneath your feet, so many white men will come upon you, burn your villages, and destroy your nation.'

"A few moments consideration, a few hurried words of consultation, and the guilty men were handed over to our troops. The tribe followed as they were taken into the fort, and making a small fire within the wall, the condemned marched round and round it, singing their death songs, and then were given up to be put in irons and held in custody until time should determine how many lives should pay the forfeit; for it is well known that Indian revenge is literally a life for a life, and the Colonel had decided to give them into the hands of the injured tribe, to do with them as they would.

"Some weeks passed, and it was found that five lives were to be paid for in kind. A council of Chippewas decided that the five selected from the prisoners should run the gauntlet, and the decision was approved.

"Back over the lapse of these many years I pass, and seem to be a child again, standing by the side of my only brother, at the back door of my father's house.

"The day is beautiful, the sun is so bright, the grass is so green, all nature is so smiling, it is hard to realize what is going on, over yonder by the grave yard, in that crowd of men and women. For there are gathered together the Chippewas, old men, women and children, who have come out to witness or take part in this act of retributive justice. There are the blue-coats, too, and various badges of the United States uniforms, for it is necessary to throw some restraint around these red men, or there would be wholesale murder; and, borne on the shoulders of the young men, we see the forms of the wounded, dying chief, regarding all with calm satisfaction, and, no doubt, happy in the thought that his death, so near, will not go out unavenged. And there stood the young braves who have been selected as the executioners; their rifles are loaded and locks carefully examined, and all is ready when the word shall be given.

"There, too, under guard, are the five men who are to pay the forfeit for the lives taken so wantonly and treacherously.

"Away off, I cannot tell how many rods, it seems to us children a long run, are stationed the Sioux tribe, and that is the goal which the wretched men must run for their lives.

"And now all seems ready, and we stand on tip-toe, while the bolts and chains are knocked off, and the captives are set free. At a word one of the doomed men starts, the rifles with mourning aim are fired, and under cover of the smoke a man falls dead. They reload, the word is given, another starts with a bound for home; but ah! the aim of those clear-sighted, blood-thirsty red men is too deadly; and so one after another, until four are down.

"And then the last, 'Little Six,' whom at that distance we children readily recognize from his commanding height and graceful form; he is our friend, and we hope he will get home. He starts, they fire, the smoke clears away, and still he is running; we clap our hands and say 'he will get home;' but another volley, and our favorite, almost at the goal, springs into the air and comes down—dead! I cover my face and shed tears of real sorrow for our friend. And now follows a scene that beggars description. The bodies, all warm and limp, are dragged to the brow of the hill. Men who, at the sight of blood, become fiends, tear off the reeking scalps and hand them to the chief, who hangs them around his neck. Woman and children, with tomahawks and knives cut deep slashes into the poor bodies, and scooping up the warm blood with their hands, eagerly drink; then, growing frantic, they dance and sing their horrid scalp songs, recounting the deeds of valor on the part of their brave men, and telling of the Sioux scalps taken at their last horrid feast they leave the mutilated bodies festering in the sun.

"At nightfall they are thrown over the bluff into the river, and my brother and myself, awe-struck and quiet, trace their hideous voyage down the Mississippi to the Gulf of Mexico. We lie awake that night, talking of the dreadful sight we have seen; and we try to think what the people of New Orleans will say when they see those ghastly upturned faces; and we talk with quivering lip and tearful eyes of 'Little Six,' and the many kind things he has done for us, the bows and arrows, the mocauks of sugar, the pretty beaded moccasins he has given us; and we wish he could have run faster, or that the Chippewa rifles had missed fire. And we sleep and dream of scalps and rifles, war-whoops and frightful yells, and wishing it had been a dream.

"Next day the darling chief sat up in bed painted himself for his death, sang his death song, and with those five fresh bloody scalps about his neck laid down and died, calmly and peacefully, in the comfortable hope, no doubt, of a welcome home in those 'happy hunting grounds,' prepared by the 'Good Spirit,' for all those Indians who are faithful to their friends, and avenge themselves upon their foes.

"A few years ago, I told this to another 'Little Six,' 'Old Shakopee,' as he lay with gyves upon his legs, in our guard-house at Fort Snelling, awaiting execution for the most numberless cold-blooded murders, perpetrated during the dreadful massacre of 1862. He remembered it all, and his wicked face lighted up with joy as he told me that he was the son of that 'Little Six,' who had so brave a run for his life; and he showed as much pride and pleasure in listening to the recital of his father's treacherous conduct as the children of our great generals will do some day, as they read or hear the deeds of bravery or daring that their fathers have done."

USEFUL RECIPES.

Rice Griddle Cakes.—Two cups of cold boiled rice slightly mashed. 1 cup of flour, and the same quantity of corn meal, mixed with cold milk enough to form a stiffish batter, a little soda dissolved in the milk, and nearly twice the quantity of cream of tartar in the flour.

Straws (very nice).—Nearly 1 quart of flour, in which mix well 1 tea-spoonful of cream of tartar; in this cut finely a piece of butter the size of an egg; break 3 eggs in, and add two cups of sugar. Dissolve 1 tea-spoonful of soda in one cup of milk, and add it to the flour etc. If not stiff enough, more flour can be added, or if too stiff, more milk; but they are much nicer just to get the right proportion, and not have to add at all. Cut them out about as thick as doughnuts, and fry in hot lard.

New York Tea-Biscuit.—Nearly 1 quart of flour, in which thoroughly mix two tea-spoonfuls of cream of tartar; add one large coffee-cup of sugar—light brown does very well; cut finely half a cup of butter; make a hole in the middle of the flour, and pour in a coffee-cup of milk, or about half a pint, and in this drop a tea-spoonful of finely powdered soda; stir all well together with a knife, flour the board and pin, and roll out about half an inch thick. Cut into cakes, and bake in a quick oven about fifteen minutes.

Rusk.—Three pounds of flour, 1 of butter, 1 of sugar, 1 quart of milk, 3 eggs. Melt the butter in the milk. When tepid, pour it slowly on the flour, so that it will not be lumpy; stir it well; then add the sugar, break the eggs, beat well a few minutes, and add a tea-cup of yeast. It is best to mix overnight; and when light have the pan well greased, grease a spoon, and drop them in, a spoonful at a time. When nearly done, sift sugar over them, and when taken out of the oven, brush with white of egg, and sift sugar again on them.

Sally Lunn.—Three pints of sifted flour, 1 of new milk, in which has been dissolved a quarter of a pound of butter, 3 eggs broken into it, 2 tea-spoonfuls of sugar, 1 gill of home-made yeast. The flour should be well stirred in before the eggs are added; about a teaspoonful of salt. This should be baked in two "Turk's-heads."

To Keep Smoked Hams.—During the hot summer weather it is often difficult to keep them; but by making a sack of coarse cotton cloth a little larger than the ham, and after putting one in, filling around closely with chopped hay, there will be no trouble. They should hang either in a smoke-house or in a cool, dark, dry place.

Sweeping Carpets.

Persons who are accustomed to use tea-leaves for sweeping carpets, and find that they leave stains, will do well to employ fresh-cut grass instead. It is better than tea-leaves for preventing dust, and gives the carpet a very bright fresh look.

A dressmaker was poisoned to death a few weeks ago by making up a green tarletan dress. So much of the arsenic entered the pores of her skin that she died a few days afterward.

HIGH HEELS.

Visiting a hospital in a large city is by no means a pleasant occupation. The sights are not agreeable; the surroundings suggest no ideas of a happy or agreeable character, save those connected with the care of the sick, the prostrate, the suffering. Especially do these remarks apply to hospitals devoted to surgical cases. In these institutions all the sights are of a painful aspect. Men and women are to be seen suffering under the most dreadful afflictions, their bodies distorted, their limbs twisted, excrescences clinging to them like living curses, eyes gone, and the whole human economy burdened by special maladies, which can only be reached by the keen knife, the clear eye, the steady nerve, and the iron hand of the veteran surgeon. And then the preparation and labor are on a level with the task to be accomplished. Men, women and children, lifeless under the effects of chloroform, or some other agent of a similar character; human bodies carried from place to place on stretchers; the noiseless, but not bloodless, work of the operators, the writhing of subjects when returning consciousness makes them sensible of what has been done, are all parts of a scene which, if once witnessed, will never be forgotten. But all this is necessary as a means of relieving sufferers from pain, and restoring them to the use of all their natural functions. Science, skill and care have reduced the sufferings of those compelled to undergo surgical operations, to the lowest possible point. But enough remains to frighten people from paths, the end of which is the operating table and the surgeon's knife. One of these paths, which just now is filled with victims, is the wearing of high-heeled boots by ladies and children. The practice is openly condemned by learned surgeons, and Dr. William H. Pancoast remarked the other day, after performing a painful operation on an interesting little girl whose feet had been ruined by wearing wrongly-constructed shoes, "this is the beginning of a large harvest of such cases." And what else can be expected? Mothers walk the street with heels on their boots from two and a half to three and a half inches high, and not more than an inch in diameter, and their daughters follows the same bad and barbarous practice. In many cases severe sprains of the ancles are suffered. But these are not the worst fruits of the high-heel torture. The toes are forced against the fore part of the boot, and soon begin to assume unnatural positions. In many cases they are actually dislocated. In others the great toe passes under the foot, the tendons harden in that position, and lameness is contracted, for which there is no cure but the knife. When the injuries do not take this form it assumes other aspects almost as horrible and distressing. There are thousands of young girls tip-toeing it along our streets to-day, who, in a few years, will be cripples if their parents do not interfere and remove the cause. We will have a race of women almost as helpless, so far as walking is concerned, as those of China. We condemn the practice of confining the feet of Chinese children in wooden shoes, and yet that practice is no more injurious to the feet than forcing them into a small boot, with an Alpine heel. This is a matter of grave and serious import and hence we press upon the mothers and fathers of the land. If they would not feed the surgical hospitals, and have groups of maimed daughters in their homes, they must commence a crusade upon high-heels. No father should have high-heeled boots in his house, any more than he would keep a vicious dog in the parlor. When skillful surgeons like Dr. Pancoast, from the operating-room, raise their voice against high-heeled boots, it is time for old and young ladies to pause and listen. At this period, they can choose between high-heels and the operating knife. In a short time, it may be the latter, or permanent lameness.—*Philadelphia Age.*

GRAY'S MUSIC STORE,

Musical Merchandise of every Description.

THE RECENTLY INTRODUCED

BURDETT ORGAN.

The manufacturers of the BURDETT ORGANS have succeeded in producing an instrument which may in a manner be compared to an orchestra, containing a variety of tones richly voiced. The stops in this make not only add to the power of the organ, but give a perfect imitation of different instruments, so that a simple melody may be repeated a number of times and the interest of the listener will be increased. It is with pleasure we acknowledge the flattering testimonials we have received from leading organists in California among whom may be named

MR. GEO. T. EVANS, Organist of the Church of the Advent, Howard Street, S. F.
MR. SAM'L D. MAYER, Organist of St. John's Church, Oakland
MR. H. M. BOSWORTH, Organist of Calvary Church, S. F.
MR. J. W. C. KHIND, Organist of Howard St. M. E. Church, S. F.
MR. R. J. McCABE, Organist of St. Francis Church, S. F.
MR. J. H. DOHRMANN, Organist of St. Patrick's Church, S. F.
MR. CHAS. H. HOFFMAN, Organist of the Mason Street Synagogue
MR. J. MULLER, Organist of St. Ignatius' Church, S. F.
MR. GEO. SCHUCKE, Organist of the Methodist Church, San Jose.
MR. EVERETT POMEROY, Organist of the Presbyterian Church, San Jose.
MR. F. WM. GABRIEL, Organist of Trinity Church, San Jose
MR. J. W. YARNDLEY, Professor of Music, St. Augustine's College, Berkeley.
MR. LOUIS HECKMANN, Organist at the Unitarian Church, Geary Street, S. F.
MR. JAS. R. LAWRIE, Professor of Music, Santa Clara.
MR. DAVID H. BERLIN, Teacher of Music, Stockton
MR. WM. CARMICHAEL, Organist St. Mary's Church, Stockton

Our prices range from $125.00 to $600.00 in U. S. Currency, our arrangements being such that we supply our wholesale and retail customers in San Francisco without advance for freight from the factory at Chicago. The makers of the BURDETT ORGAN are convinced that they will be better paid in the end by selling a first class organ at a fair price, than an uncertain one at an astonishingly low price. We will sell organs, melodeons and pianos on time payments to responsible buyers.

Apply at Editorial room between the hours of 5 and 6 p.m.

Miscellany.

A NEW WAY OF COURTING.

About three months since a young Parisian, traveling in Germany, took the road from Augsburg to Berlin. In the car he selected were four other persons, two mammas and two daughters, both very lovely. The two mothers were face to face in one corner, the young man took the opposite, and found himself face to face with the young ladies.—The young man put on a distraught and absent air. The conductor came to demand the tickets. The young man paid no attention at all, when the request was many times repeated. Roused from his reverie in presence of the ladies, the young man had recourse to arouse, to avoid exciting ridicule. What are you saying?" said he. "Why do you not speak French?" The conductor then explained by signs, the ticket was changed, and the young man returned to his reverie. But not to enjoy it long, for this time the young ladies aroused him. They began in full voice.

"This young man is a very handsome one," said one.

"Hist, Bertha," said the other with a sort of affright.

"Why, he doesn't know a word of German. We can talk freely. How do you find him?"

"Only ordinary."

"You are difficult. He has a charming figure and distingue air.

"He is too pale, and besides, you know I do not love dark features."

"And you know I prefer dark to blond.—We have nothing but blonde in Germany.—It is monotonous and commonplace."

"You forget that you are blond."

"Oh, for women it is different. He has pretty moustaches."

"Bertha, if your mother should hear you?"

"She is busy with her talk, besides it is no hurt to speak of moustaches."

"I prefer the blond moustaches of Frederick"

"I understand that; Frederick is espoused to you; but I, who am without a lover, am free to exercise my opinions, and I am free to say that this young man has beautiful eyes."

"They have no expression."

"You do not know, I am sure he has much spirit, and it is a pity he does not speak German; he would chat with us."

"Would you marry a Frenchman?"

"Why not, if he looks like this one, and was spirited, well born and amiable? But I can hardly keep from laughing See, he doesn't mistrust what we are saying."

The young traveler was endowed with a great power of self-control, and he had preserved his absent and inattentive air all the time, and while the dialogue continued, he thought how curiously his attempt to avert a laugh, by pretending not to know German had resulted. He looked carefully at Bertha, and his resolution was taken. At a new station, the conductor came again for the tickets. Our young man, with extra elaboration and in excellent German, said:—

"Ah, you want my ticket. Very well;—let me see; I believe it is in my port monnaie. Oh, yes, here it is."

The effect of the coup-de-theatre was startling. Bertha nearly fainted away, but soon recovered under the polite apologies of the young Frenchman. They were pleased with each other, and in a few weeks Bertha ratified her good opinion of the young man and her willingness to marry a Frenchman.—They live at Hamburg.

MODES OF WALKING.

An ingenious contemporary gives the following summary of the different modes of walking adapted by those who go to and fro upon the earth:—

Observing persons move slowly; their heads move alternately from side to side, while they occasionally stop and turn around.

Careful persons lift their feet high, and place them down slowly; pick up some little obstruction, and place it down quickly by the side of the way.

Calculating persons generally walk with their hands in their pockets and their heads slightly inclined.

Modest persons generally step softly, for fear of being observed.

Timid persons often step off from the sidewalk on meeting another, and always go around a stone instead of stepping over it.

Wide-awake persons "toe out," and have a long swing to their arms, while their hands move about miscellaneously.

Careless persons are forever studding their toes.

Lazy persons scrape about loosely with their heels, and are first on one side of the walk and then on the other.

Very strong-minded persons place their toes directly in front of them; and have a kind of stamp movement.

Dustable persons walk fast and slow by turns.

One-sides persons, are always very selfish ones "toe in."

Cross persons are very apt to hit their knees together.

Good-natured persons snap their fingers and thumb every few steps.

Fun loving persons have a kind of jig movement.

IMITATION.

Children will imitate their elders. Harry is no exception. One day he was much interested in watching the process of "picking a chicken" for dinner. Next day mamma was very busy, Harry very quiet, and so long so that she mistrusted mischief. She quietly went down stairs and found him with the kitten in his arms, who was vainly striving to free herself. The boy was persistently diving into kitty's sides.

"What are you doing, Harry?" asked mammas

"Why I am picking the *fedders out*," was th.

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to cultivate so to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places; to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Gum or Comb,

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H&L

Is on the red cover of the packages

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by Editor Farmer.

San Francisco, June 24th.

Money and Exchange Table.

Exchange on England	110x110¾
Price of Gold	112¾
Value of Greenbacks	90@91
Value of Wheat in Liverpool	11s. 11d.
do do New York	165a170 bush

Price of Money in Eastern Cities.

Boston—Money is abundant at 4 to 5 per cent. on call—and loans on time made at 6 to 7 per cent.

New York—Money is easy at 4 to 5 per cent. on call—6 per cent. on time.

Price of Money in San Francisco.

Money is considered to be very abundant here, yet the rates are 1 to 1½ per cent. per month Bank rates. Large amounts are loaned by capitalists at 10 per cent. per annum, and great loans at 8 per cent.

GRAIN AN FLOUR MARKET.

Where are now the "Croakers" about our grain crops? read the news from every county and almost every section of our State, and steadily the Reports read, "Crops much better than expected;" "Crops are a general average;" "Crops never were better" These are the general reports now coming in, and those newspapers that in the early season reported otherwise, did so in the interest of speculators, or from mere hearsay and without any positive knowledge. *Our* reports are always from practical observation and from reliable sources, and we repeat now, our crops for 1871 of Grain, Wool, Wine, Hops, Fruit, &c., will load more ships (if we can have the ships to load) than was loaded in the year 1870, count Ship for Ship, and Ton for Ton.

The season for weeks has been peculiarly favorable for maturing the grain for the reaper, and the Harvest now beginning in earnest, will be gathered with greater satisfaction and profit than was anticipated.

The value of the Wheat and Flour is now both declining. Markets dull. Sales few.

As we stated last week, the new Wheat will set in price about $2 20, it may be less, not more. Some parcels of old Wheat, and the quantity is still large, will sell $2.35@$2.50.

We repeat, our Wheat crop will be much larger than anticipated, and Oregon will have a very large harvest, and those grain growers that sell now at $2.20 will be much better off than those that "Hold on" and sell next Spring, if they get $3.00 the cental.

The Barley crop will be large, very large; the Oat crop a very good one, both selling well now.

The Hay crop will be a very large one and well gathered.

The Potato harvest will be a large and a good one, and other root crops and small stuffs will be good.

Dairy—Butter, Cheese, Eggs etc.

M. D. French & Co.

The Dairy Market is fully supplied. Butter and Eggs from Oregon, Chicago, and elsewhere abroad, in large quantities give our market the look of great plenty, and yet the market holds up its figures very well, for San Franciscans are very great eaters. They want "*both sides of their bread buttered.*"

SUMMIT HOTEL,

At the Summit of the Sierra Nevada Mountains, on the Central Pacific Railroad

JAMES CARDWELL, Proprietor.

This Hotel is the FINEST SUMMER RESORT in the State of California. The Climate is cool and pleasant in the Summer months; the Hotel overlooks "Donner Lake," and is about a pleasant drive from the famous Soda Springs.

A FINE LIVERY STABLE

In connection with the Hotel, at which Fast Turn-outs can be had at any time.

The Table will be supplied with all the Delicacies of the Season.

FOR INVALIDS no better resort than this can be found the World, as the air is always Pure and Invigorating.

BOUND VOLUMES FARMER

Volumes of the "California Farmer" for The last EIGHT YEARS cattefully bound, can be had at the Farmer Office at $8 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops Castor Beans, Flax, Hemp, &c., and the Whole series of Essay of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and invaluable to the Cultivator of the Soil.

FARMER Office will be promptly attended

REDUCTION IN PRICE

AND

Liberal Club List

With a desire to place the CALIFORNIA FARMER in every family on this Coast we have concluded to make a

Liberal Reduction in Price,

and to place it at such a sum as that every Cultivator of the soil could have it.

We have announced the Terms in another column, and here we give additional inducements to our patrons and friends to not only subscribe for the Farmer, but to secure other valuable Publications at a moderate price also.

We make this announcement for the express purpose of meeting the wants of a large increasing Agricultural population, and a large emigration that will soon be coming to our shores, who need the information of our resources, and we feel we can serve our State in no better way than to give to these new comers the

CALIFORNIA FARMER

at a very reasonable sum, so that every family can have a copy.

Massachusetts Agricultural College.

THE FIRST GRADUATING EXERCISES.

Three days of great interest to the people of Massachusetts have been enjoyed at the AGRICULTURAL COLLEGE at Amherst, on which occasion a large assemblage of distinguished citizens were present and large numbers gathered from all the neighboring towns.

The exercises were honored by the presence of many distinguished Guests, the Veteran Friend and Patron of Agriculture, Hon. M. P. Wilder, the Governor and Lieut. Governor, Prof. Agassiz, many other Professors and distinguished scientific men and farm friends of the College.

We present a very interesting address of the Governor of the State to the Graduates, when at the close of the address the Governor conferred upon Twenty-seven Graduates the Degree of "Batchelor of Science."

During the intermission Prof. Agassiz was introduced to the students and delivered a brief but eloquent and earnest address to them.

The afternoon exercises were also of deep interest, made so by a most interesting Historical Address by Hon. M. P. Wilder, the long-life devoted friend of Agricultural Science; this Address we hope to give in full at an early day with other incidents of this Prosperous Agricultural College.

GOV. CLAFLIN'S ADDRESS TO THE GRADUATES.

Gentlemen of the Graduating Class: Under ordinary circumstances the part assigned me by the Trustees and Faculty would be performed in announcing the degrees conferred upon you; but this occasion, now in the history of the Commonwealth, justifies me in a more definite reference to the designs of this institution.

The establishment of a college by the State as part of its educational system has been often discussed; but until recently there seemed to be no necessity for such an institution. All who desired a strictly classical education were abundantly provided for at Cambridge, Amherst and Williamstown. The State would add very little to the facilities furnished by these institutions, which have been among the foremost in the land, whose history brings to the Commonwealth the highest honor, and in whose success every citizen must feel a deep interest. But while such excellent opportunities were within the reach of almost every young man who desired to enter one of the professions—of law, medicine or theology—there was little provision made for those who wished to prepare themselves by special education for the more active occupations of life.

In an rapidly growing State like ours, whose people are now devoted so largely to manufacturing, mercantile and commercial pursuits, there is an ever increasing demand for educated men, educated not for professional life, but for one of these callings. It has been universally admitted that the so-called liberal professions require a specific culture under the most experienced teachers, with all the aids of apparatus and libraries; but it has generally been supposed that the great interest of labor could be fully promoting by leaving its various branches to the guidance of men who have had no advantages beyond those furnished by personal experience. But what is science or literature other than the accumulation in one mind of the concentrated thoughts of thousands of minds through successive ages? The interests of labor have now, however, become so interwoven with science as to demand equally with literature and the liberal professions the advantages of apparatus, libraries, and thoroughly educated instructors.

In all our colleges to day there are not more than 1400 pupils, one-fourth of whom are to graduate yearly, a few of them may enter the counting-room, here and there one follow the sea, and occasionally a graduate will devote himself to the pursuits of agriculture. How small then must be the supply of educated young men for the constantly increasing business of the State.

The old apprentice system has passed away; nor would it meet present wants if it was still retained. The age demands the educated intellect to direct the immense establishments which are now necessary in our growing country.

We may deprecate the aggregation of capital, the consolidation of railroads, the extension of municipalities; but since we cannot prevent such combinations it is certainly wiser to provide for the necessities which are created by this demand for facilities and cheap products. It was pleasant to ride in the old stage coach in days gone by, to meet the proprietors of the store, to deal directly with the head of the manufacturing establishments, but no one now wishes to spend a day in traveling to a place that can be easily reached in two hours, or in running to twenty different stores in a city when he can be accomodated in one. Who would think, for a moment, of going back to the time when there were six or eight lines of railroads between Boston and Buffalo, instead of two.

All these conveniences require great preparation, experience and skill. The constant cry meets us, where is the man who is fitted for such high trusts? and encouragement and ample remuneration await the one who is capable of filling them.

The State, perceiving the need of an education suited to such callings, established the Agricultural College, not to take the place of the other colleges—they are wanted to-day more than ever—but to give opportunities to young men to fit themselves for the important positions which are open to educated and skilled men in active life. If the demand of the professions necessitates the graduation of three or four hundred students annually from the colleges, how much greater must that demand be for educating men for the other branches of industry of this busy, prosperous State.

Ignorance of the first principles of trade and of matters actually connected with a particular branch of industry to be followed, has been the cause of half the failures in years gone by. Had the projectors employed educated men, skilled in the business, comparatively few enterprise would have proved disastrous.

With all our experience in railroads, most of them having been built over practically, several times, we still locate badly and construct imperfectly. In mechanics we are slow to adopt the best methods because the men are no at hand to explain the processes and conduct them successfully, and in agriculture our want of knowledge has compelled us to follow old methods which have become unprofitable and necessitated the abandonment of once productive estates. It is the glory of Massachusetts that whenever she discovers a want she is ready to furnish a supply. Are there children uncared for and growing vicious, reformatories are provided. Are there orphans, they are placed in homes where love and tender care will be bestowed upon them. The deaf and dumb, the blind and the feeble minded receive such instruction as is suited to their condition. Thus, therefore, when it was found that greater facilities were needed by those engaged in the great industries of the State, especially by such as were to direct the energies of labor and give to it its highest value, she established this noble institution and provided for its wants.

Private munificence has added to its completeness and beauty. We trust that more Durfrees, Hills and Knowltons will be found to increase its facilities, especially in those matters not absolutely essential to a thorough education, but important giving scope and finish to the knowledge acquired in the course of study.

The people of the State have looked forward to this day with deep interest. They desire to know the result of the instruction received in their college. They wish to understand its true relation to their educational system.

I congratulate you on the success which has attended your efforts to secure an education that may enable you to meet the responsibilities of life with high honor. With the concurrence of your instructors, the trustees, and especially these visiting friends, among them *Prof. Agassiz*, whose love of sciences is only equaled by his love of humanity, and who is chiefly interested in the success of the institution because he believes it a new instrument for the elevation of man, I may now assure the people of the Commonwealth that their highest expectations have been fully realized, and that they can take a just pride in an institution established by their authority and sustained by their munificence appropriations. Being the first graduates much will be expected of you, not in the brilliancy of your performances, but in the faithfulness with which your serve the public in such occupants as you may follow.

The friends of the College have every confidence in its future, but you can greatly aid to their number and increase its influence by maintaining an unswerving integrity and unselfish devotion to duty.

These degrees are conferred upon you with the cordial approbation of the authorities of the college, for they feel that you have faithfully followed their instructions.

The friends of the college congratulate you upon the success which has attended your efforts, and you have the best wishes of the people of this great Commonwealth, whose noble purposes in founding this institution you will more highly appreciate as you mingle in the affairs of men, and as you have clearer perception of the great purposes of Life.

As you leave these pleasant scenes to commence your selected work, resolve to be true to the instructions given you here; to the great principles of liberty, and to the guidance of Holy Writ,

EUROPEAN SILK MARKET.

In the general market we have had of late a very large business with gradually improving prices—in most classes this may now be quoted 1s per lb.

The immediate cause of the movement was the purchasing and forwarding large parcels of various classes to France in anticipation of the contemplated duty on importation—but some little may be attributed to an idea that the European crop is likely to prove less favorable in quantity than was recently expected.

These shipments to France have swollen our deliveries to very large figures, especially in Canton silk; but this class has not at present shared to the full extent in the advance of price.

In Japan silk, on the other hand, the advance may be quoted 1s to 2s upon the lowest moment.

Bengal silk has shared to some extent in the general activity, but the business done has been chiefly confined to the best filatures.

The periodical public sales commenced on the 21st, and were concluded on the 22nd ult.

The quantity offered was about 1,600 bales Bengal silk, 1,800 bales China, 700 bales Japan and 1,300 bales Canton silk.

Sundry parcels were withdrawn, having been sold by private contract, the residue was allowed to pass as usual without biddings.

FRENCH MANUFACTURE OF SILK.

The value of silk manufactures, including the proportion of worked-up silk in mixed goods, produced in France in the year previous to the war, may be estimated at 48,000,000*l*. Notwithstanding revolutions and other intestine troubles, the industry has progressively advanced since 1803, when new life was infused into it by Napoleon, after it had for years languished through the effects of the Revolution of 1790, when the silk-mills were destroyed, and the mulberries uprooted. Lyons will continue famous for silks of the richest quality and designs in exquisite taste; but we may anticipate that the decline of the home demand will be such as to test to the utmost the resources of the manufacturers, and accordingly the silks of the best quality and newest design forwarded to other markets will range higher than ever—the tendency to further advance being only checked by the abundance and variety of this season's English silks, and the late civil troubles in Paris, Lyons, and neighboring districts. Previously to the war, France had upwards of 280,000,000 silk-looms at work, at Lyons, St. Etienne, Nimes, and Avignon, and in Picady and Normandy. Of course there are no statistics for the present time.

NEWSPAPER FOLDING MATCH.

A match between newspaper folders took place last evening, for a small wager, in the *Journal* mailing room, between John Carvern of the *Journal* and James Fitze of the *Post*, the paper used being the *Weekly Journal*. Fitze folded 1501 to Carven's 1460, each making four folds to each paper, in one hour's time. Thus it will be seen that Fitze was the winner by forty-one papers. This is considered the fastest folding ever performed.

What is that which no one wishes to have, and no one wishes to lose? A bald head.

THE RIGHT SPIRIT.

What a change in the tone of the Newspaper Press both North and South within the last few years, and what intelligent mind or Christian heart does not rejoice at this grand change for the better as an indication of the spread of Truth and the *dawn* of a Better Day.

We copy from the New Orleans *Picayune* of June 16th, the following high and noble views expressed upon the subject of the Freedom of the colored race. All honor to the Press South for such manly, free and Christian sentiments.

"There seems to be no necessity of taking the lugubrious view of the future of the African race which is so often held. Providence has permitted the representatives of the race in North America to reach to a goodly degree of civilization, higher by far than any to which Central and Southern Africans have attained elsewhere any time within historical memory. So high, in fact, that if they were the sole occupants of an adequate area in the South they would be more competent for self-government than the people of many European or Asiatic countries. No colony ever planted has grown so fast, advanced so far, or become so rich, as the Africans who came to these Western shores within the last century and a half. Bad, mercenary, interested, and wicked as were the motives of those who brought their progenitors to this land, the result, under Providence, has been the enhancement of their welfare. While we may pray never to see anything more of that kind of involuntary and unconscious beneficence, we may equally hope that the good which has grown out of the original evil may be permanent, and that the 5,000,000 of the colored race may prosper, improve and multiply in the full enjoyment of all the fruits of their labors. On this empty continent of ours there is room for them, and room for a great many millions besides. We welcome the report of the steady though slight increase of numbers among the colored people of our country, and earnestly hope that the statistics of the census of 1880 may show, not only an increase in numbers, but also a good increase in property, comfort, and education."

HOW TO GROW RICH.

Most excellent counsel upon this subject comes from a Journal well posted in matters about "Rich Men," and *what made them so*, which we here append. We clip it from the New York *Mercantile Journal* of a recent date.

Young men, careful and thrifty, are often in doubt, where and how to invest their small savings so as to achieve pecuniary independence. Many dazzling opportunities for large gains are presented, and stocks and other securities are offered for sale. High dividends and interest are offered as inducements.

Now we would say to all who wish to accumulate, before everything else, seek *security* in your investments. Be satisfied with a moderate rate of interest; high rates almost invariably mean very hazardous risks. The main secret of increasing your stores is in keeping what you got. Those who fail to improve their circumstances, are mostly those who risk their savings and lose them. As a rule, any one who is shrewd enough to keep what he gains, and puts it out safely at moderate interest will especially if he invests the interest with equal care, in time be sure of wealth. But he who is tempted to speculate and venture his small capital in the majority of cases loses it.

WATERPROOF GLUE.

To render glue or gelatine insoluble in water, add 1-50th of its weight of bi-chromate of potash, both taken dry, and after the mixture is dissolved in water and applied any fabrics expose for a few minutes to the action of sunlight. To make goods waterproof, immerse them in a solution of india-rubber or gelatine, to which bi-chromate of potash has been added, and expose to the light. As the operations are usually conducted in the light, a special exposure can be dispensed with. The process can be recommended for goods in which considerable body and stiffness is desirable. For combining cloths and other articles together, by painting each layer with the chrome-gelatin cement and exposing to light they will adhere firmly, and withstand the action of water. Paper, wood, leather and cloths in general can be rendered impervious to water in this way.

It would be well also to try experiments with parchment papers, to see if two surfaces of it can be glued by this mixture.

The *Chicago Tribune* asks and receives $22,000 for a column of advertisements one year. The business men of Chicago are keen to pay it. There is one house in Cincinnati that pays $4,000 a week for advertising. There are several in Cleveland, even who pay as high as $10,000 a year. Somehow these men don't break up; a liberal advertiser never does.

Will Shirk, of Indiana, has whittled out a wooden clock, with a penknife, but will Shirk such employment in future.

WHAT CALIFORNIA NEEDS.

[Editorials.]

California needs a manufacturing *Mania*, to place her right and to use up the idle capital that is now seeking investment, in fact is going a begging.

The vast water power of our State should be called into the service of manufacturing, and our *raw material* should all be used here.

Why should we *export* Wool and *import* woolen goods?

Why should we *export* Hides and Leather, and *import* Boots and Shoes and Harness work?

Why should we export our Tallow and import our Candles and Soap?

These are very important questions for our Political Economists!

What has built up the great State of Massachusetts but her Manufactories?

What has made Boston the "Hub of the Universe," and the richest and most influential city in the land? It is the capital she has invested in the manufactories of the State, the Goods of which are sold in that city where the manufactories of Lowell, of Dover, of Lawrence and Waltham, and other great towns are owned. This is what makes Massachusetts so prosperous.

California possesses greater advantages for manufacturing than any other State in our whole Union, for we have a vast water power almost Free of Cost, and we have no expense in the cost of heating our manufactories here, which at once saves *one third* of all the expenses.

We are confident that in less than *ten years* that unless our own people wake up to the great advantages we possess and secure them, that Foreign capital will come in and *take away our Birthright*, for we have opportunities that should not be longer delayed but used and improved.

SALE OF GREAT RAILROAD INTERESTS.

Reports have been current for some time past that the California Pacific Railroad, with the Steamers and all interests of that Company, had been sold to the Central Pacific Railroad; the question seems now to be settled, as the Vallejo Recorder of yesterday says:

"It is now a fixed fact that the sale of the California Pacific Railroad to the Central Pacific has been consummated, and the transfer was made yesterday of all the property of the road, including the vessels of the company. The new owners have already commenced to lay between Sacramento and Vallejo heavier rails, united by the improved Fish joint. They will otherwise begin immediately the repair of the road, and make some other desirable improvements."

This is undoubtedly true; and while many persons talk of monopolies, and express great fears that *rates of passage* and *freight will be* increased, *we* think the opposite exactly.

We have always had faith in the *Management* of the Central Pacific; they have too much at stake to do ought that will not tend to make their roads prosperous in the highest degree, and in no way can they better do this than by satisfying the public that they desire to place passage and freight rates *as low as they can* consistently with due reference to a steady progress of all the great work they have in hand.

We believe they see their own interest in meeting the wants of a rapidly increasing travel and trade, and we feel confident they will prove that they are wise and public spirited also, and this *new change* will redound to the *Good of the Public*.

A tourist traveling continuously without any stoppage can now go around the world in 80 days, making the entire journey by railway and steamship, and going by way of Liverpool, the Suez Canal, Ceylon, Singapore, Hong Kong, Yokohama, San Francisco, and the Pacific Railway.

Twenty years ago a man entered a farm eight miles square in Livingston County, Ill., at $1.25 per acre. It is now divided into thirty-two farms of 1,280 acres each, and is valued at $2,000,000.

TO THE APPRENTICES OF CALIFORNIA.

The Board of Managers of the Eighth Industrial Exhibition desiring to encourage and advance the interests of the Mechanical Apprentices, will, at the incoming Exhibition, award Special Prizes for the Best Specimens of Drawing, Designs, Models, or Mechanical Workmanship, and space will be allotted to this special Department.

The class, and value of premiums, to be awarded on the merit of the exhibit, by a Committee appointed by the Board of Managers.

Each exhibit must have attached the name, age and residence of exhibitor; and an application to exhibit in this Department must be accompanied with a voucher from the employer, that the exhibit is the sole work of the exhibitor.

Information will be furnished and applications for space may be made to J. H. Gilmore, Special Agent Eighth Industrial Exhibition, at the rooms of the Mechanics' Institute, 27 Post Street, San Francisco. A. S. HALLIDIE, President.

W. H. WILLIAMS, Secretary.

San Francisco, June 13th, 1871.

Agriculture.

CHINESE SYSTEM FOR THE UTILIZATION OF SEWAGE.

The Chinese are unquestionably the best agriculturists of any people, every one being an excellent gardener; for they all cultivate some kind of plants or other, and their whole country, so far from being worn out or exhausted, like many of the countries of antiquity, is as productive now as it was in the days of Confucius, a few thousand years ago; and this, there is no doubt, proceeds from their system of replenishing the soil with its best and most natural pabulum. Well may this be called also the Flowery Land; for every foot of land, rock, and even the water, sparkles with blossoms and flowers at certain seasons of the year; for a Chinaman would no more think of pouring filth into a river than he would of fetching his manure some thousand miles from the ends of the earth. Consequently their streams are generally as pure as the mountain torrent from which they take their rise. China possesses within its boundaries every specimen of the animal, vegetable, and mineral kingdoms that is to be found in any other country, and many more peculiar to itself. It is where the natives assert our first parents were started into life, and where, indeed, there exists the appearance of all we can fancy Eden was, with everything to delight the eye, and to please the taste. It is in this favorite region that men practice the following system of disposing of their *dejecta membra*. The whole of the matter which we waste and flood away they collect, either by means of open water-courses or underground drains. This is carried to some vacant space, either in the vicinity of the town, or sometimes to a considerable distance, according as the land may be obtained or may be available for irrigation, after the other operations. On being conducted into a kind of sump prepared for it, stained round with gypsum, it is then either pumped or lifted by more primitive means (such as a kind of turbine, wherein the outfall of the sewer gives the power to work the machinery for the raising, and several other simple contrivances, something like what we call the Persian wheel; and a sort of chain-pump) into two or more reservoirs, which have been formed either by digging out and throwing up the earth to form the banks, or else by other materials brought to the spot for the same purpose After the sewage has been discharged into one of these receptacles, until it is entirely full, it is left to settle or subside; then the same process is carried on with the next, and so on to as many as the quantity of matter or size of the town requires. By the time the last is full, the water on the top of the first that was charged is let off, to irrigate either the surrounding lands, or conveyed to any distance that may be required or available. This course is repeated to the remaining reservoirs; in the mean time the first is filled again and again, until the solid matter has collected sufficiently to require removing; then the surface-water is drained off as much as possible, and in a short time the remainder is dry enough to remove in carts and wagons. This is done by breaking down the side, or anywhere most convenient. It is then reconstructed, and again made fit for use; the same to the other reservoirs in succession. The sides of these are lined with either gypsum or chalk; and where these are abundant or easily obtainable, the banks are formed of them, and great quantities are also thrown in the reservoirs during the time of filling. These banks at first will allow of the water to ooze through; but, as they are usually upon the same land which is afterward irrigated, this is of little consequence, and they very shortly become silted up with the substances suspended, and get eventually water-tight. Except in exceedingly wet seasons, a very small quantity of water ever reaches the river; and when it does so, it is as pure as the stream into which it flows. These reservoirs are of all manner of sizes and shapes, some round, some square, but are mostly oblong, some 60 yards long by about 40 yards broad; but this is entirely discretionary and immaterial as to the efficiency; the same with the depth, which varies from 12 feet to 20 feet. I will be noticed that we have been treating of a case where it has been compelled to raise the sewage; but where the fall of the land is such as not to require any lifting; there is often a continuous line of these receivers, and in many lands these have certainly been in existence for ages. Then, in other instances, they are moved about on the same estate but the same principle is carried out in each.

The smell from these works is scarcely perceptible, which may be attributed to the absorption of the ammonia by the gypsum and chalk, of which great quantities are drawn away and spread upon the land; also, all kinds of ashes are brought to the neighborhood and incorporated with the other matters in these receivers.

The expense and management of these systems are generally undertaken by the owner of the land which is treated with the manure, and for which payment is made to the authorities of the town; but in many instances they are conducted by the town functionaries themselves, and the produce sold. In large towns it is not all conveyed to one locality, but often in opposite directions, or wherever it will command the highest price.—*George Burchett, in the London Builder.*

"Marry me, my dear girl, and you will have seen the end of trouble." "Which end, sir?"

THE ALDERNEY AND GUERNSEY COW.

The general preference which has been shown of late years for the cows of Alderney and Guernsey, as producing a higher quality of milk for dairy purposes than other species, has induced the author, as well from his own conviction of its necessity as from the suggestions of friends and customers who have felt the want of such a treatise, to place the following epitome of his knowledge and experience before the public.

Until very recently an impression has much prevailed that the cow of the Channel Islands was unfitted, by its apparently delicate appearance and blood-like breeding, for the use of such persons as was unable to bestow on it the most assiduous attention and care; but experience and a more intimate acquaintance with the animal have shown that this impression is entirely without foundation, and we now constantly see the Alderney Cow thriving under circumstances that would be fitting for any other cow kept for the same purpose—viz., milking and breeding.

The Channel Islands Cow will be found invaluable for private family use, from its docility, easy pasturage and small consumption, in comparison with the peculiar richness of its milk, the average in a dairy of forty cows, under such management as is hereafter set forth, having been ten pounds of butter from each cow per week; whereas in other dairies not more than from six to seven pounds is producible from the ordinary milch cow—where alone quantity of milk has been desired—which is not the main object in a private family.

We have, therefore, in the animal under consideration the triple advantage, as before stated, of a symmetery of form which renders it an ornament to the gentleman's lawn and paddock, a docility which makes it quiet under the tether and in the hands of the milker, whether male or female; and a richness of production which not only fills the dairy with butter, but that of a firmness which it retains in the heat of the summer and a richness through the cold of winter, when the butter of the ordinary cow is barely marketable.

The prejudice against the Alderney which has existed amongst dairy farmers, whose object is only profit, by whatever legitimate means obtainable, is also now fast wearing away, there being scarcely one such in England who does not have a certain proportion of these cattle among his stock; experience having proved that the introduction of the Alderney or Guernsey (especially the latter), in the proportion of one to six other cows, has so improved the character of the dairy, that from one penny to twopence per pound in advance is obtained in any market, besides the *prestige* which the best commodity will always command.

The pre-eminent utility of the Alderney Cow as a cross in breeding with the long-horn is universally allowed where the dairy is the object. For this purpose the Alderney is superior to the Guernsey, although the milk of the Guernsey is preferable to the Alderney for mixing in the dairy. The reason which indicate the cross above mentioned are, on the part of the long-horn, its large quantity of milk, strength of constitution, longevity and indisposition to fatten in a breeding state; and on the part of the Alderney, its rich quality of milk, fine breeding and kind and quiet disposition.

The cow needed for the dairy cannot, under any circumstances, be selected from those qualities which will produce fat: The two natures are incompatible; to have the best meat, we must get rid of every tendency to milk; and to have the best butter, we must obviate every disposition to fatten. We cannot have both qualities in the same animal, and the attempt will only end in disappointment.

The results, then, of the above remarks are these: that in the first place the Alderney Cow is, above all others, especially the cow for the gentleman's lawn and paddock, and the only means by which the dairy farmer may revert to to the peculiar and important principle, so long lost sight of, which places breed beyond bulk, and was contemplated in the old adage that says—

"The Cow to breed,
The Ox to feed."

[*From E. P. P. Fowler's New Book.*

IMPROVEMENT OF LIVE STOCK

Inferior stock should be got rid of as soon as possible. It is a very erroneous practice to waste provender by feeding animals which will make no adequate return for the outlay. Old horses, cows and sheep are very unprofitable; the former are not vigorous enough to perform the labors of the farm, when the most needed. Old milch cows are not fit for dairy purposes, and old breeding ewes produce small, weak lambs and very light fleeces. The improvement of his stock should be the constant aim of the farmer. This may be done by selecting the best breeding animals that can be obtained. No money is more judiciously expended than that which goes to procure the services of a first rate stallion, bull, buck or boar. In order to produce stock, the breeding animals, male and female, must be of the best quality and they and their progeny must have abundance of good provender at all seasons. Young stock of all kinds are sometimes injured for want of suitable food and shelter at the most critical period of their lives, and these Truths we find recorded in the Buffalo *State Journal.*

PROLIFIC EWE.

A correspondent of the London Field says—"I had a rather remarkable circumstance occur here on the night of April 19 which, if you think worth inserting, I am glad to be able to place at your disposal—in the shape of a Leicester ewe lambing five strong healthy lambs. Both ewe and lambs are doing well, and seem like living."

It is thought that 900,000 head of cattle will be driven from Texas this season, 500,00 to Abilene, and 400,000 to other points.

THE SHEEP OF THE WORLD.

1. Number of sheep in United Kingdom		32,384,401
2. Number of sheep in 1868 in the following British possessions, viz:—		
New South Wales		13,909,574
Victoria		9,532,811
South Australia		4,477,445
Western Australia		599,646
Queensland		3,921,784
Tasmania		1,742,914
New Zealand		5,409,919
Mauritius (including goats)		18,057
Natal (including African sheep)		286,264
Cape of Good Hope, ditto		9,336,065
		01,984,881
3. Number of sheep at latest dates in the following foreign countries:—		
Russia in Europe (exclusive of Portland and Finland)	Average of 1859 to 1863	39,315,000
Russia in Asia		5,815,000
Sweden	1867	1,621,931
Norway	1865	1,705,394
Denmark	1866	1,875,053
Prussia	1858	22,262,037
Wurtemburg	1867	655,858
Bavaria	1863	2,039,988
Saxony	1867	304,037
Holland	1867	1,027,215
Belgium	1856	583,486
France	1866	30,086,224
Spain	1865	22,054,967
Italy	1867	11,040,330
Austria	1864	16,573,459
Switzerland	1865	445,400
Greece	1867	2,539,538
United States	1857	32,795,797
Total		284,825,694

We thus get a total of 285,000,000 sheep in the countries reckoned, of which amount England possesses one-eighth, the British possessions enumerated one-fifth, and England and these possessions together one-third. The calculation, unfortunately is not exhaustive, omitting, for instance, the Argentine Republic; but, with that exception, all the countries which contribute materially to the great international markets for wool appears to be included.

[*The N. Y. Economist Review of* 1870.

COAL DUST FOR FUEL.

A great and important saving of our burning material can be made, says the *Scientific American*, by the saving process here presented, and is now practiced in Europe to a vast extent as will be seen by the statistics here presented:

"It is a well known fact that coal, either bituminous or anthracite, produces in mining, breaking, screening, and handling, an amount of dust, commonly known as slack coal, amounting, on an average, to fifty per cent. of the coal production, thus causing a considerable loss to the parties engaged in mining, as but a small portion of this dust coal, and that only of the bituminous coal, is needed for blacksmith purposes, while the anthracite slack is entirely useless. The immense quantity of refuse coal must necessarily be got out of the way, whether dumped into a stream, to be carried off, or heaped on ground which has to be dearly paid for. In the anthracite coal regions, this immense amount of waste is constantly piled up around the mines in vast, unsightly mounds, burying the mining villages, and sadly encroaching on the limits of many of the chief towns. The amount of this waste cannot be less than fifteen millions of tons, and every year adds to the rapidly increasing dirt bank.

In France, in Germany, in Belgium, and in England, the slack of the bituminous coal has been converted into lumps or cakes of different sizes and shapes by mixing it with coal tar. Monsieur Dehaynin, from Paris, started the first manufacture of artificial fuel, or agglomerated slack, at Montigny-sur-Sambre (Belgium) about eleven years ago. He possesses to-day two manufactories in Belgium and two in France. He manufactured in 1870 over 1,200,000 of tons; railroad companies used 231,600 tons, the navy used 260,000 tons, and other industries 70,000 tons.

Among the railroad companies, that of the Paris, Lyons, and Mediterranean consumes pressed coal exclusively, requiring 1,200 tons per day. The Northern Company, of France, between Paris, Amiens, Dunkerque, and Calais, does not use pressed coal exclusively, although its daily consumption amounts to 300 tons. The scarcity of coal tar is the only thing which prevents M. Dehaynin from erecting other factories and increasing the manufacture of his compressed coal.

The claim that the maize or Indian corn plant is indigenous to the soil of the New World, has lately been contested, and recent investigations of certain Chinese records are cited to prove that it was cultivated in China prior to the discovery of America. Chinese authors maintain that it came originally from countries west of China, and that it was introduced into that country long before the first arrival of the Portuguese, in 1517.

A NEW ARTICLE.

Composition Pipe for Conducting Water.

THE ATTENTION OF RAILROAD COMPANIES, Farmers, Dairymen and others, is called to our new Pipe for leading water. It is lighter than ordinary lead pipe, and much cheaper than iron, will stand a heavy pressure, and deliver about one-third more water than iron pipe, provided the sizes are the same.

We are now manufacturing all sizes, from one-half to two-inch, and can fill large orders at short notice and put on reels for shipment, the same as lead pipe.

Samples can be seen at our office,

No. 11 California Street.

OIL CAKE MEAL

THE BEST FEED KNOWN

FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL which we are now manufacturing. This description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or who are growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it there is only ONE pound is pronounced to be equal to two pounds of Corn Meal and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Linseed Oil Cake Meal, 21 2 100 per cent; Corn Meal, 11 per cent, Barley Meal, 13 per cent; Oat Meal, 16 per cent; Oil Cake Meal, 21 2 100 per cent. For life-sustaining properties to all stock are 41 to sudden changes of weather or over-driving [illegible]

For MILCH COWS it is particularly valuable, increasing the quantity of milk and giving it a quality to a far greater extent than any food known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food generally mixed with the mash of bran slops, roots, or [illegible] of any kind It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other food—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or foundered from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and sleekness of the hair

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($40 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold, and at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

San Francisco.

TRUE'S

IMPROVED

POTATO PLANTER.

This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops those pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed.

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of inestimable value, because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very time of time," and gives leisure to its owner for attending to his other spring work, which would otherwise often overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

BOTTLE-R'PENESS.

(Translated from the German by Dr. Joseph Berisch.)

The object of laying up wine is to give it time to reach the highest stage of its development; such is the case, when it has attained the most delicate and fragrant bouquet of which it is at all capable, and henceforth has its place in the bottle.

When this important epoch has arrived, can only be ascertained by practice, the tongue and the nostril being the most important probes of the perfection of the bouquet.

Another circumstance is here to be mentioned which, however self evident, is too often overlooked. No wine is to be esteemed bottle ripe except that which has expelled all the albuminous substances which it can ever expel. If a wine which has not reached this point, is drawn off into a bottle, it will inevitable become dull; a sediment forms in the bottle, which rises at any concussion, and clouds the wine. No one, however, cares to buy wine if dimmed even in the least degree—in which case dealers call it dusty—for any want of clearness is always regarded as indicating wine which is either very young or diseased.

The obscuration of wine which is clear when drawn off into the bottle, is not, however, to be called decay; the contact of the air with the wine in its passage into the glass simply brings about the process which ought to have taken place in the bottle; the albuminous substances are made insoluble by means of the oxygen. If the wine remains in store a length of time with the segregated albuminous substances, the latter, by their ready solubility, afford the ingredient best calculated to infect the wine with disease, particularly in case the corks are not absolutely air tight.

Wines several years old sometimes "break," or turn cloudy when drawn off; which simply proves that while in store they have been too much shut off from the influence of oxygen, and not often enough transferred from glass to glass; in other words, they have been kept young to long, by inadvertence. A wine which is in this condition has not yet fully developed its bouquet, on which account, as well as on account of its inevitable obscuration, it ought not yet to enter the bottle. It will always be expedient, before drawing off a wine respecting the condition of which there may be a doubt, to bottle a few samples and let them lie for some time in a moderately warm place. If the wine is found to remain clear, even when shaken, after it has been thus in store for some time, it is ripe for the bottle in the true sense of the word.

In bottling, soon after it has been done, all the processes which were going on in the cask under the influence of oxygen, are interrupted, for the oxygen cannot penetrate the glass as it can the wood of the cask. To close the bottles none but good, stout corks, should be selected, and, to exclude the air entirely, these corks should be covered with an air tight coat of sealing wax, or rosin.

When the bottles are to be shipped to a distance the cork should be further encased in tin foil, which is not apt to crack and start like rosin and other brittle substances.

The transformation of wine does not cease until sometime after it has been bottled, for, in spite of every care some air will mingle with the wine as it enters the bottle, and a quantity of air is inclosed between the wine and the cork. It is not until the oxygen of these portions of air has been entirely consumed by the wine, that all further processes, acting upon the bouquet, come to an end. Pasteur has proved that wine never contains oxygen unassimilated, and that no oxygen is contained in the portion of air found above the wine and under the cork; all the oxygen being sucked out of that portion of air by the wine. The fact remains, nevertheless, that the bouquet of a wine which has lain in the bottle a *certain* length of time, is found to be somewhat more delicate than it was before. As yet a satisfactory explanation of this phenomenon has not been found; it is quite possible that the bouquet comes out in its full force only after all the chemical transformations of the wine have ended for some time. The bouquet of mixed wine will not fully come out for some time after it has been laid up in the bottle; wines mixed with pure brandy, have the scent of the liquor strongly at first, but after they have been laying still for some time the taste of brandy is undiscovered by the keenest palate. Similar causes may be at work to make cordials grow finer with age; even fresh perfumery is far from having that exquisite fragrance which it acquires after having been some time on store.

[Wine and Fruit Reporter.

DEEP CULTIVATION.

A more careful attention to the preparation of the Soil for raising Root Crops of all kinds; it is now a well understood truth that soil must be *deeply cultivated* to produce well; and soil will be better prepared for another year for the Beet Root for Sugar making and the Mangel Wurtzel, Carrot and Ruta Baga for stock. By the reports of our City Government it is stated that $15 per ton for carrots was allowed to the contractor for the "Fire Department" for the "Horse Feed." Why did not some of our Farmers take that contract? We think $15 per ton for carrots will pay when 30 tons can be raised on one acre.

VALUABLE FRENCH WINES.

(Sale of Chateau d'Yquem Vintage, 1868.)

We learn that the vintage of 1868 of the famed growth Château d'Yquem was purchased last week by the firm of Jules Olavelle, for (we believe) the sum 5,500*l.*; the said growth of 1868 vintage being comparatively small, consisting of 14 hhds. of extra crême tête, 40 hhds. of tête, 60 hhds. of centre, 24 of queve. The Château d'Yquem formerly belonging to the house of Sauvage d'Yquem, who transferred it by marriage to the Seigneurs de Lur-Saluces to the noble family of which it still belongs. The estate is situated in Sauterne, and contains 148 hectares, ninety of which are devoted to the culture of the white grapes which produce the world-famed wine. The price which some of the matured wines attained have been sometimes fabulous and 24,000 fr. per tonneau of 4 hhds. have been paid for some 1847's, at which price (which is 240*l.* per hogshead) the Great Duke Constantine, brother of the Emperor of Russia, bought four hogsheads during his sojourn at Bordeaux in 1859, and since then it is said that as much 4*l* a bottle has been given by the Bordeaux trade for that same wine for Russia. The grapes which produce the wine consist of three varieties, called Sauvignon, Blanc Semilion, and Muscatel. They are gathered only when beginning to rot, each individual berry being watched, and carefully separated from the bunches with special scissors, by an immense number of women going round the vines during a period of three weeks or a month. From this mode of gathering results the creation of various qualities of wines, as the most perfect berries are naturally first gathered, when gradually the choice becomes reduced, and and the average of the gathering less perfect. Each gathering is classed in generally either three or four classes termed as follows:—Extra crême tête, crême tête, centre, and queve. Sometimes the whole is blended together, and sometimes it is separated; It depends, of course, on the disproportion in the classifications, which sometimes are so great that there is no resemblance whatever between one and the other.

GARDEN GROUNDS LAID OUT.

THOSE WHO WISH THEIR GARDEN GROUNDS renewed and replanted, or those who desire to have Grounds Designed and laid out upon Scientific principles and with correct taste and skill, as

Adapted to this Climate.

can have this work done to their satisfaction by calling at this Office, where all the best works on Gardening can be found, and where the various Styles, both European and American, can be seen. Grounds of any extent, from

ONE THOUSAND ACRES,

to small Gardens, in our City, will be designed and laid out and the Trees, Plants, Shrubs and Vines, and Bulbs all supplied of the very best variety and reliable quality, and the work done to complete satisfaction, by calling at the Office of the California Farmer.

None but Educated men ever engaged in such work.

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA. By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

THE GARDEN VEGETABLES OF AMERICA. By Fearing Burr.....Price $2 50

CULTIVATION OF THE GRAPE. By W. C. Strong, of the Nonantum Hill Nurseries, Brighton. A complete guide to Grape Cultivation.....Price $3 00

FLOWERS FOR THE PARLOR AND GARDEN. By Edward Sprague Rand, Jr. Beautifully Illustrated.—Price.....$3 00

THE ROSE BOOK. By Francis Parkman. Containing all known Roses, with directions for the cultivation of all varieties worth growing. Beautifully illustrated.....Price $3 00

GARDEN FLOWERS AND HOW TO CULTIVATE THEM. By Edward Sprague Rand. With complete descriptions of all hardy and out-door Plants, Trees and Shrubs.....Price $3 00

THE PARLOR GARDENER. A Treatise on In-door Plants. By Cornelia J. Randolph.....Price $1 00

COMMISSION SALES-ROOM

—AND—

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and when they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns several of which we have the exclusive sale for this Coast.

THE POTATOE PLANTER,
JEBB'S PATENT CHURN,
CHEESE CURD CUTTER,
PATENT WEEDING HOE,
LIFTING HAY FORK,

WITH OTHER VALUABLE IMPLEMENTS.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

TREE SEEDS

OF ALL THE VALUABLE KINDS.

Also,

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

Silk Culture.

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER, Fruit and Ornamental Seeds.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

FLOWERING BULBS.

RARE AND CHOICE KINDS

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass seeds, please state the nature of the soil and the extent of land to be sown

Please remember that Lawns can be made so as to be perfect at any season of the year.

FINEST MIXED LAWN GRASSES,
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS,
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

EVERGREEN AND DECIDUOUS SHRUBS,
ORNAMENTAL TREES,

FRUIT TREES.

The newest and most approved sorts:

ORANGES, LEMONS, FIGS,

Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries Gooseberries, Currants, and Blackberries

PERPETUAL FLOWERING ROSES

Of the best kind

GREENHOUSE AND BEDDING PLANTS,

These are grown at our residence under our own care where they always can be selected.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference

WARREN & CO.

Farmers' Headquarters 320 Clay Street, up-stairs

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING, AUGUST 3, 1871.

THE CALIFORNIA FARMER READING ROOM AND MUSEUM OF NATURAL HISTORY.

220 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agricultural, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half those rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

Editor's Chair,

OUR FRENCH CORRESPONDENT.

We are again in receipt of our regular correspondence from Paris which was interrupted by the war. Our reports thence are full of interest, and the first Letter will appear in our next.

We have letters from "Rose" with a description of an Eastern Tour, and shall give it place in due time.

COMPLIMENTARY.

We have received a complimentary Card to the Eighth Industrial Exhibition of the Mechanics Institute, for which we return our acknowledgments to the authorities.

MUSIC.

We have received a parcel of new and very choice Music from the well known Musical House of M. Gray, on Clay St.

HON. HORACE CAPRON.

We had a very pleasant and interesting call at our office from the Commissioner, who now takes the new and honorable position at Japan.

We were much pleased with the plans of the Commissioner, who now is on his way to a great and valuable field of labor, and one for which he is fully qualified.

THANKS, THANKS.

We return our sincere thanks to Dr. F. Mueller, Director of the Botanical Gardens at Melbourn, for valuable Publications, Exchanges, and Parcels, of which we shall note more fully hereafter.

The documents and parcels sent to our care will be duly forwarded.

JAPANESE INTERESTS WITH CALIFORNIA.

The wonderful developments which are being noticed by the recent opening of the Ports of Japan with the United States, the developments in the Arts and Sciences, in the education of that people for a future communication with our country, is eliciting a very great interest in the minds of real thinking men as to what the future will reveal.

The departure on the last steamer of Hon. Horace Capron and the Scientific Corps that went with him, will, we think, accomplish great good, not only for Japan but for this country; and *we here in California are destined to be the recipients of advantages of the Japan trade to a large extent.*

Already the Japanese have shown their interest in our institutions by their large contributions to the coming Fair of the MECHANICS INSTITUTE, which opens next week. We have a very interesting series of facts which we shall soon give, relative to Japan and the Students that now are visiting our land, which shows their earnestness to know all that is desirable to know of American Institutions, American Inventions and American Progress. These sketches we shall give from time to time, having made arrangements to receive from Japan regular information of that wonderful country.

☞ OUR PRESENT NUMBER

We shall send this number to many who are not on our list of Subscribers, and hope after they have examined our Journal they will give their voluntary and cheerful co-operation to this old and long established Journal for the upbuilding of our State.

The success of our merchants depend upon the success of our AGRICULTURAL INTERESTS; the value of REAL ESTATE is also dependent upon the prosperity of *Agriculture*, and our COMMERCIAL INTERESTS also depend in a great measure upon the development of those resources that shall load our ships and give them full freights.

We send Extra copies to many abroad who are inquiring about CALIFORNIA; such enquirers should have the FARMER that they may learn of the rapid growth of our State and its capacities for a permanent Home for which they are in search, or for a place of BUSINESS, which promises so much in the future.

We send numbers also to those persons abroad who will find it greatly for their interest to ADVERTISE with us now early, in order to secure the trade of the coming season. Advertisers abroad are apt to delay this important duty till the season is too far gone to reap all the good they might.

We hope a cheerful response from many who will read this card addressed to them specially.

CROPS, SEASONS, PROSPECTS.

The vast amount of money that is accumulating at all the great marts of Trade and Commerce certainly indicate increased wealth, an easy money market, and a prosperous trade; and this is also sure sign of *large crops everywhere*, for it is the *crops* after all that brings the *money*, and "money makes the mare go" is the old saying.

Our crops are moving, yet the demand for wheat for our millers is greater than the supply. The cause of this is easy to explain, for money is easy among Farmers, and Grain declining in price has induced them to "hold on," and in many cases to become *Speculators* and buy grain, to hold, "taking the chances" for a rise. A very prominent farmer said to us this week, if wheat goes down to $2 I will go into it largely; and this feeling is prevalent. Money is plenty; this induces speculation.

Wheat having declined, there are a few ships loading for Liverpool, as freight is less; wheat is purchased freely by our millers to meet the large demand for Chico, which is now taking Flour in large quantities.

European reports of crops are favorable for a good Home supply.

By our Letters and Exchanges from Australia and all that region, we may have an opening for some wheat and flour; the prospect is speculative, however, not certain.

The season for harvesting has been very favorable. California has been free from any serious storms or weather to damage crops; we have been highly favored.

Business is good everywhere, and money can be had at low rates. Merchants acknowledge that trade is increasing, and the "outlook" very favorable for a great Fall trade.

Whatever hue and cry there may have been in the early season as to short crops, that cry is over. Our grain, wine, wool, corn, and other products *loom up* in very handsome amounts, and all indicate prosperity at home and win us credit abroad, for what we grow and manufacture in California will always be of the very best quality.

Never have our *Sheep-men* been so prospered as the present year, and our *Vineyard-men* can say the same.

Our orchards and our Garden produce will all pay well, while the varied *new products* begin to swell the general total of our Exports to a noble sum.

It is much to be regretted that with all our capacities as a State, with soil so fertile, season so very favorable and facilities so great, that California should still IMPORT Butter, Eggs, Cheese, Lard, Soap, Candles, Dried Fruits, and many other products and manufactures which could be produced here, and at a profit, and save all the gold which their value drains from us every month. This matter is worthy serious consideration and some united action to prevent it, and thus a great public benefit result to all.

OUR WINE HOUSES.

WINE HOUSE OF LANDSBERGER & CO.

We spent a little time the past week procuring Wine data, and calling upon Wine-growers and Wine Dealers to collect reliable statistics, and having spent a little time at the above named House for data, we give the following which shows the magnitude which the Wine business is assuming now in our State.

In the warehouse of Messrs. Landsberger & Co., first:

In their cellar Champagne maturing of their choice brands 60 to 65000 Bottles.

Upon the first floor in their Large Tierces and Pipes of all kinds, 60,000 Gallons.

Upon the second floor Wines in preparation for bottling, 5,000 Gallons.

Upon the third floor choice Wines in preparation about 15,000 bottles.

Upon the fourth floor about 30 Pipes, or equal to 13,000 bottles.

To show the working power needed, there are in the cellars now just received 120,000 new wine bottles being cleansed ready for use.

The demand for their wines is rapidly increasing, they have now also in store of Champagne 1200 Cases and of other Wines 2000 Cases.

To show the real demand, the monthly sales are 1000 Cases Champagne and 600 of other various kinds put up by this House—their Wines being now known in every State in the Union and also in Europe, keeps this House very busy to meet the demand.

This large and prosperous business has been established in consequence of giving to the business a large capital, with a complete knowledge of wines and the tastes and wants of our people at Home, and a determination to send out only wines of the very best and purest quality.

We shall from time to time give sketches of all the Wine Interest and Wine Dealers of the highest class, so that the Wine Interest of California may be known abroad.

THE LAND QUESTION.

We have received two Pamphlets compiled by by Henry George, Esq., on the Lands of the United States, National and State, giving detailed sketches upon all the material questions connected with Public Lands, Land Grants, Railroad Lands, &c., a series of discussions of value to all who take an interest in Public Lands. These Pamphlets can be found at the Booksetores of White & Bauer and Loomis

CHAMPION HARROW.

Our Farmers should call at the Manufactory and see this new and valuable Harrow.

THE MECHANICS FAIR

The Pavilion is rapidly putting on the look of readiness—all should remember that. Tuesday, the 8th, the Pavilion opens.

BLUEBIRD.

'Tis said the little birds feel blue,
Because their bills are over dew.

OUR WINE DISTRICTS.

[Having seen reports in Dailies and other Journals relative to the Wine crop of the Counties named which we not esteem correct, we have taken pains to procure from reliable sources the following estimate of 1870, and this is even less than the real total, closely scanned it would reach perhaps, including all small lots 100,000 Gallons more. The present year will largely exceed that of 1870.

THE VINTAGE OF SONOMA VALLEY.

The Carefully Estimated Crop of 1870.

	Gallons		Gallons.
Buena Vista	125,000	Tampin	14,000
A. F. Haraszthy	18,000	Taylor	10,000
Tichnor Estate	55,000	Woehler	8,000

Drexel & Gundlach	70,000	Whitlin	7,000
Winkle	20,000	Poulterer	5,000
Rufus	8,000	Hill	6,000
Snyder	10,000	Whitman	7,000
Agoston	25,000	Sam'l Naus	3,000
Dr. Faure	8,000	Quitzow	10,000
Robbins	7,000	Jones	3,000
Edwards	30,000	Hamilton	3,000
Craig	30,000	Wise	4,000
Carriger	30,000	Whamquartner	13,000
Fowler	13,000	Dunbar	7,000
O Brien	9,000	Wm. Hood	20,000
Krohn & Williams	16,000	Bennets Valley	60,000
Stuart	20,000	Rodger's	4,000
Warfield	9,000	Sewell Estate	5,000
Justi	3,000	James Shaw	5,000
Lemotte	9,000	O'Brien	8,000
Guerin	12,000	Englander	16,000
Total			744,000

The following are those who sold Grapes or made Wine, but their number of acres are alone estimated.

	Acres		Acres
Smith	30	Schell	5
His Neighbor	20	Popper	5
W. T. Shaw	12	Lubeck	20
O. B. Shaw	20	Whalton	30
Wratten	30	Maxwell	6
Sewell	12	Doty	10
Giovanari	10	Leavenworth	30
Seding	9	His Neighbor	25
Shaddock	10	Walton	35
Col. Rodgers	10	Sheller	
Eldridge & others	15		
Dubring	5	Total	354

Many others remain unmentioned which we were not able to procure in time.

THE VINTAGE OF NAPA VALLEY.

	Gallons.		Gallons.
S. Wing	8,000	Lockwood	2,500
Winters	20,000	Mansfield	8,000
G. Grozinger	90,000	Backus	3,000
Pellet	35,000	Siegrist Bros.	36,000
Crane	25,000	Neighbor to Wing	5,000
Kroger	22,000	do. to Lockwood	12,000
Fulton	10,000	General Keys and others	10,000
Woodward	20,000		
Dr. Wood	5,000		
Total			311,500

THE VINTAGE OF SAN JOAQUIN COUNTY.

Possesses about 500 acres of Vineyard all in the neighborhood of Stockton. Most of the Grapes are sold for the table, Wine, however, is made to the following amount:

	Gallons
Clement Detten	6,000
H. Meyers	12,000
Geo. west	13,500
Others about	10,000

Estimating these 354 acres of Vines at an average of 700 vines per acre, (some have more and some have less) at 300 gallons per acre, we have then to add One Hundred and Six Thousand Two Hundred Gallons more in Sonoma.

The account then would stand:

SONOMA estimated in Gallons	$744 000
do. do per Acres and Gallons	106,200
	$743,200
NAPA estimated in Gallons	311 500
And this is estimated by some as 100,000 Gallons too low.	
SAN JOAQUIN COUNTY	41,500
	1,096,200

Here we have in these three Counties over One Million Gallons Wine without estimating the Tons of Fruit sold for the Table.

The Wine interest will be seen by the schedule above of Production of only three Counties, and these not yet full, is now a great interest, and we can say it is a rapidly accumulating one, by the several large Wine Houses in our city doing a very large business, annually amounting to MILLIONS OF DOLLARS each.

POLITICAL WARFARE.

It is most unfortunate for our country that we can have no *General Election* take place without a resort to the personal abuse of the leading candidates of both parties. Such conduct by partisan papers is a dark disgrace to the Press.

Calumny and slander against an opponent never wins, and those Journals that seem to take pleasure in maligning the opposite party candidates should remember the fate of "Haman."

The present Gubernatorial Canvas seems to call out some very gross political vituperation against our public men; this course we think most unworthy of respectable journalism, and especially the tirades against our present "Chief Magistrate;" and while we may have our own preferred candidate, such a course pursued by any party will only make converts for the opposite, for slander and abuse comes not from a good cause or a pure source.

"All is Fair in Politics," is an abuse of principle; change it, and let the motto be—

"All that is *just* is fair in Politics."

THE ALFALFA CLOVER.

To correct many wrong notions about this really famous and valuable grass (Clover) we give these brief words in answer to several inquiries which have come to us relative to it, its nature, time of planting, soil, curing, value as hay, &c.

Many newspapers over our State speak of it as a *New Clover*, which is a very great error. Alfalfa, or Chili Clover, has been known in California and grown here for nearly *twenty years*, not generally, however, but in various parts of the State, and would have been more extensively grown had it not been for the great unwillingness of growers to select the right kind of soil for it, and prepare the ground as it should have been prepared, and the shiftless manner in which experiments with Alfalfa were made, prevented the success that otherwise would have been attained, and prevented its general introduction.

Alfalfa was first introduced here in 1852x1853; we ourselves had it on sale, and at that date furnished a large quantity of it to the Agricultural Department at Washington.

When first introduced here from Chili it was very dirty, and we had to screen it; since then it comes in cleaner condition, yet not clean, at early day it sold at $75x$100 per lb., and at early date Alfalfa was successfully grown at the "Quintay Ranch" and the "Simpson Ranch," Marysville, and *three and four crops* per year harvested. We recorded in the FARMER in early years as high as eight and ten tuns by some growers per acre.

Very erroneous impressions prevail about Alfalfa, and many very egregious mistakes are made by some newspapers that give directions about its culture; what they say seems to be *guess work*, for they acknowledge they *don't know much* certainly about Alfalfa.

SOIL AND CULTURE.

The Soil for Alfalfa should be a light porous soil, made mellow by deep cultivation, and *sub soil plowing*, as the roots will go down for moisture 10 to 15 feet, if they can work through the soil; the soil should be therefore plowed very, very deep, deep as a Subsoil will go down, 16 to 20 inches, and thus break up the soil below for the *roots to go down*.

PLOWING AND PLANTING.

Alfalfa when it first vegetates is very tender, as are all grasses of the *Trifolium species*, and therefore it must *only* be planted when it can be sure to escape *frost*, till its roots are established. Many directions have been given to plant in the Fall; this is a mistake, as heavy rains beat down the soil on the seed or young plants, and it is in great danger of our frosts in January and February, and often in March.

Our advice is to have the soil deeply and finely prepared early in the Fall, and left in *ridges*, so that after the heavier rains are over, then by cross plowing over the ridges and a second plowing, the soil will be in good condition to plant *Alfalfa*.

The more plowing the better, for Alfalfa *once put into the soil*, it remains put in for years, therefore, this work of preparation should be well done. After the soil is thus finely plowed, say last of February or first of March, according to the warmth of the season, sow the Alfalfa, and steel harrow in well; then a Brush Harrow to make the surface level and smooth, to bury the seed and for the mower, and the work is done.

The quantity of seed required per acre varies according to the skill of the Sower; it should be sown *thick* and *even*; thick, so it may grow fine grass, and even, to avoid bare spaces, which scorch the field and look bad in the Alfalfa field, for this is one of the handsomest growing grass crops ever seen, when it has been planted as it should be, and it is the *best hay*, when cut and cured as it should be.

WHEN MOWN HOW CURED

Alfalfa has been often rejected by growers because it made *coarse* Hay. The reason of this was, it was sowed sparsely, and grew rank, and was allowed to get too old before it was mowed.

It is therefore important to sow very thick, that it may grow thick and succulent, and when 18 to 20 inches high, before it is too far seeded, while the blossom is opening fully, then mow and cure by sweating, which makes the Hay rich, sweet, and full of its juices, and it will retain its greenness and prove the best hay known; when it is allowed to be grown coarse and burned up in curing, it is indeed worthless.

We would here remark that along our *River Banks*, and on our *Tule Lands*, where the soil is alluvial and composed of wash, or decayed vegetable matter, Alfalfa will do well, a proof that neither flood nor frost will injure it after it is once established in the soil. It must be understood always, that it must not be allowed to grow rank and coarse before mowing; always mow it while young and tender, then good Hay is secured

Although this is too early to think of Alfalfa sowing, we are called upon by several inquirers to give this information, as there has been so much written that was erroneous. Growers can preserve this counsel till the season for planting comes, and then we are confident they will find it of service to them.

ANATOMICAL MUSEUM.

This most interesting and scientific Physiological Museum is being constantly enlarged in the number of its specimens in the "Science of Life" and in the results of a violated law of nature

At this Museum will be seen and taught *Lessons* that can be learned nowhere else, and young men should visit the Museum and there learn where the Rocks and Quicksands exist where so many young men are wrecked.

We consider this Museum one of the most important Institutions in our State.

Why are the *Walks* around the Post Office favorable to the *Agricultural Interest?*

Because those who walk over the *stoney* walks, it makes the corn grow,

HORSE TALK.

It is only of recent date that our Livery Stables have taken a just pride in securing fine Horses, fine Carriages and showy Harness, with other outfits, so as to make what is called among horsemen a "Splendid Turnout"

The increase of fine Horses, and the rapid advance made on our Coast in carriage building and in harness making has been so rapid and so complete that California can now send out a single team, a double team, four in hand, or grand Turnout of six horses, with barouche, and splendid horses all of California material. Horses bred here, carriage, harness, &c., all made here, and establishments as fine as Boston, New York, or Philadelphia can boast.

OUR CITY STABLES.

Our Stables in this city have a pride in their teams, and justly so, for we have all that is needed to suit all tastes, and suit the purse also when a pleasure drive is wanted.

CITY STABLE, Bush St. (Magner & Byington.)

This is one of the most extensive and best managed Stables of our city, boasting such a goodly number as there are in our city.

Feeling in the mood of looking at some of the best Horses in our city as Roadsters, we spent a little time in looking at the list of noted Horses we here name, which were very courteously shown us by the Proprietor.

This Stable is a large, well ventilated building, which is of vital importance to the health, action, and good condition of that "noble animal" the Horse.

The number of first rate horses in this Stable is Fifty, and Turnouts for all of best style, in carriage and harness.

We here give a brief sketch of some of the leading Horses, known as A No. 1 animals:

GOV. LOW.—This is the noted *Parade Horse*, used on all public occasions. This horse was used by Gen'l Ellis on the Fourth of July, and is particularly selected for *great occasions*, a splendid light gray, and of a graceful action, seemingly conscious of being at the *head* on all great occasions.

BISMARK (*from Leviathan Stock*), a fine dark chesnut, of fine figure, well put together, and very fine action; time 2.40.

BELLE, (*by State of Maine, out of a Glencoe Mare,*) a splendid gray Mare, destined to prove a good animal and fast.

RAIL SPLITTER—A young trotter, will prove a fast one, and come down to 42.

RALSTON, (*Sired by Signal*), a Pacer, and half-brother to Regulator.

"GOLD HUNTER," (*From Old Hunter*), a fine young colt, good style of build, fine stepping animal, full of life.

MARY STUART, (*Sired by Odd Fellow*), a fast animal.

JIM CROW, (*by Peacock*), a fine brown horse.

KATE GRAY, (*Black Hawk Stock*), a fine filly, 4 years old, and time 2.50.

NELLIE, (*Messenger Stock*), 5 years old, a very fine animal.

ODD FELLOW, (*Sired by Chloroform, out of a Sir Archy Mare*), a thoroughbred, and a fine horse; time 3 minutes.

KENTUCKY HUNTER, (*a fine thoroughbred out of Messenger Mare*), splendid form and action, less than five years, and large size.

These with other fine animals, all of the best blood, will furnish to those who wish a fine ride, the means of enjoying the same, as the very finest Barouches, Phaetons, Rockaways and Buggies are here to match with fine harness, the fastest horses, and horses well trained.

At this Stable can be seen the Miller Buggy, undoubtedly the finest buggy yet made in this State, made by W. P. Miller, Esq., Carriagemaker of Stockton, a superb light buggy, highly finished and "gold mounted," very light, yet very strong, a pattern buggy.

Among the many fine carriages at this Stable we noticed a magnificent Barouche made by "Kimball," six-seated; this furnished with six fine blood horses, all bright bays, and all sixteen hands high; harness all "gold mounted," we feel sure will match any turnout in the United States, and this too in *California*, from a stable, now in the heart of a large city, on a street that less than twenty years ago was a barren sand hill.

We have thus given a sketch only in part of the popular Stable and teams of Magner & Co. (known as the City Stables on Bush Street), and can cheerfully commend those who wish a safe and pleasant ride to try some of the teams we have thus briefly sketched.

NEGLECTED FRUIT TREES.

No one who observes the orchards and Fruit Trees of our gardens, the many that are so neglected, need wonder at the quantities of small fruit that often glute the market.

It seems surprising that our fruit growers will "kill the Goose that lays the Golden Egg." This they in reality do when they neglect to prune and properly care for the *trees* that are to bring them in the gold

The true reason of the miserably small fruit that fills our market is wholly caused by the neglect of the trees

LOOK OUT FOR FIRE.

The late numerous fires in all our cities and towns is the evidence of the dangers that are round about us, arising from the dry season, carelessness, and incendiarism.

No one should be without the protection of a "Policy of Insurance against Fire." A few dollars and safety is secured.

The Farmer is in the midst of many dangers. Hootsmen in the grain stubble, loafers laying about with a pipe, and the incendiary, are the dangers that constantly surround the Farmer.

Let them all as one see they have a good Policy, and this they can get at the Pacific Insurance Company.

NATIONAL FAIR.

THE AMERICAN POMOLOGICAL SOCIETY will hold their Fair this year at Richmond, Virginia, commencing September, 7th, and continuing three days. Exhibition open to the Nation. (See Circular in our columns.

Hon. M P. Wilder, President, P. Barry, Esq., Chairman Fruit Committee.

STATE FAIRS.

THE STATE AGRICULTURAL SOCIETY FAIR AT SACRAMENTO,

Commencing Sept. 18th, and continue six days

C. F. Reed, President, Maj. Beck, Secretary, T. N. Hoag, Assistant Sec'y.

NEW YORK STATE AGRICULTURAL SOCIETY, Fair at Albany,

Commencing Oct. 2d, and continues five days.

THE OHIO STATE FAIR WILL BE HELD AT SPRINGFIELD, CLARK CO,

Sept. 25th to the 29th inclusive.

Wm. Lang, Esq., of Tiffin, President.
John H. Kleppart, of Columbus, Secretary.

THE GEORGIA STATE FAIR WILL BE HELD AT OGLETHORPE PARK, ATLANTA, GA, October 16th to 20th, inclusive.

Gen. John B. Gordon, President,
Gen. A Echols, Secretary.

NEW JERSEY STATE AGRICULTURAL SOCIETY, Fair at Waverly Station, (near Newark).

Commencing Sept. 19th, and continues four days.

IOWA STATE AGRICULTURAL SOCIETY, Fair at Cedar Rapids

Commencing Sept. 11th, and continues five days.

KANSAS STATE AGRICULTURAL SOCIETY, Fair at Topeka,

Commencing Sept. 11th, and continues five days.

COLORADO AGRICULTURAL ANNUAL FAIR Fair at Denver City,

Commencing Sept. 12th, and continues five days

H. B. Brace, Pres., F. A. Clifton, Sec.

MECHANICS' INSTITUTE SAN FRANCISCO The Annual Fair of this Institution will open in this city August the 8th, and continues for *Four weeks.* A. S. Hallidie, President, W. H. Williams, Secretary.

COUNTY FAIRS.

SAN JOAQUIN COUNTY FAIR AT STOCKTON,

Commences Sept. 12th, and continues four days

SANTA CLARA VALLEY FAIR, AT SAN JOSE,

Commencing Aug. 28th, and continues five days

THE MARIN DISTRICT FAIR, AT PETALUMA,

Commencing Sept. 25th, and continues six days

THE AGRICULTURAL FAIR OF THE UPPER SACRAMENTO, AT CHICO,

Commencing Sept. 26th, and continues four days.

CHOICE

AUSTRALIAN SEEDS.

We have just received from Australia a very choice collection of Australian Seeds, particularly of the

AUSTRALIA GUM TREE.

Of these we have SIX KINDS, and some never yet had here of new and choice varieties.

AUSTRALIAN WATER PLANT.

In this collection we also have the WATER PLANT, a rare flower known as *Villarsia Cathlifolia*, which we shall introduce into our Lakes and Ponds.

JAPAN SEEDS.

These Seeds with a new invoice of Japan Seeds, Evergreens and Seeds of the Tea Plant, and also of the Camellia, make a collection of valuable Seeds, now for Sale at the

FARMER OFFICE

A FINE

"Kentucky Hunter Stallion."

A very splendid Stallion of the "KENTUCKY HUNTER" Blood, Full Pedigree, Five Years old Sixteen hands high, very fine form, good action, one of the very best STALLIONS now for Sale on this Coast.

This Horse will be sold at a Bargain if applied for soon. This animal is of a Stock and style seldom found for sale, an early application will secure a splendid animal at a Bargain.

Inquire at this Office. 36.5

Mules for Sale.

Fifteen very fine MULES of large size for sale at a Bargain, or will be exchanged for Sheep of good quality

Apply to the FARMER OFFICE. 35.5

Marcus C. Hawley & Co.

Importers and Wholesale Dealers in

HARDWARE

AND

Agricultural Implements,

108 & 110 Front street and

12 & 14 Pine street,

San Francisco.

We are now receiving a addition to our Large Stock of Hardware and Agricultural Implements, a full and complete assortment of Plows, Harrows, Cultivators, Seed Sowers, &c., &c., suitable for the coming Season.

THE "DEERE" GENUINE MOLINE PLOW, all sizes from 7 to 18 inches.

"COLLINS" or "SMITH'S" Patent Cast Cast Steel PLOWS from 7 to 20 inches.

BOSTON CLIPPER PLOWS, all sizes,

PEORIA PREMIUM PLOWS, all sizes,

CAST IRON PLOWS, all sizes,

CAST IRON SIDE HILL PLOWS,

"MILLERS" PATENT CAST STEEL SIDE HILL PLOW, it has no equal, all sizes,

SHOVEL PLOWS, Single and Double,

COTTON SWEEPS,

SUBSOIL PLOWS all sizes, with and without Draft Rod.

THE CELEBRATED "EUREKA" GANG PLOW with Steel Plows and Smith's Cast Steel Plows, 10, 12, and 14 inches.

"HILL & KNAUGH'S" GANG PLOW, the most popular Plow in the market, will plow any depth, 10, 12, and 14 inches.

"HILL & KNAUGH'S" SINGLE PLOW, for Deep Plowing, all sizes.

CULTIVATORS, 5, 7, and 9 Teeth Reversable.
" 7, 9, 11, 13 Teeth Gang with Patent Lever and Castor Wheel.

"KNOX'S" PATENT REVERSABLE AND EXPANDING HORSE HOES.

"HOWE'S" PATENT REVERSABLE AND EXPANDING HORSE HOES.

"BUCKEYE" GRAIN DRILL, 9, 10, and 12 Hole, Every Farmer should have one of these Drills

EIGHTH

INDUSTRIAL EXHIBITION

OF THE

MECHANICS' INSTITUTE

WILL BE OPEN TO THE PUBLIC

AT 11 A. M. TUESDAY, AUGUST 8, 1871, With the usual Ceremonies.

HON. MILTON S. LATHAN

Has consented to deliver the OPENING ADDRESS.

The EXHIBITION BUILDING is situated on

UNION SQUARE,

In the heart of the City of San Francisco, and on the line of three street railroads, the building covers a ground area of 82,200 feet, and is complete in all its appointments.

Steam power and water supply furnished free to exhibitors.

All goods competing for premiums, or to be catalogued, must be receipted for by the Entry Clerk before AUGUST 12th.

Rules and Regulations can be obtained from any of the officers at the Institute or Pavilion.

In conjunction with the Industrial Exhibition, the BAY DISTRICT HORTICULTURAL SOCIETY will hold its first Exhibition of the Fruits and Flowers of California occupying a space of 320x50 feet.

Prices of Admission.

Season Ticket admitting gentleman and one lady.....$5 00
Season Ticket admitting one person..... 3 00
Season Ticket admitting juvenile under 14 years..... 1 50

☞ *The above Tickets are not Transferable.* ☜

Single admission.....50 cents
Children under 14 years.....25 cents

Children must be in charge of guardians or parents.

Tickets can be obtained from any of the Managers, at the Mechanics' Institute, 37 Post street, at the Pavilion, Union Square, or from the Principal Music or Drug Stores in the city.

☞ No bills will be paid unless ordered by the proper Committees. By order, A. S. HALLIDIE, President. W. H. WILLIAMS, Secretary. 36.4

A CARD.

TO EASTERN ADVERTISERS.

We feel it our special duty to notify our Advertisers in all the Eastern States, that if they desire to reap the *Full Benefit* of their advertising that

NOW IS THE TIME TO BEGIN.

It is all important to Californians who desire to *Import from the Eastern States* their

Trees, Seeds, Implements or Merchandise,

that they should know where to find them *months* before they are to be used, so they can by a Correspondence with the parties know *who can satisfy them them to the best advantage.*

Those Dealers in any articles they desire to Introduce into the Pacific Coast, should by all means begin early. Soon our season of PUBLIC FAIRS commence, and this is a time when our Journal is scattered widely, and thousands sent out in the Cause of the Fairs and to promote our Industry, and all these will advantage ADVERTISERS.

The advertiser that begins early is the one that takes the lead in the business, and now is the most auspicious for CALIFORNIA will Import everything that is

NEW AND DESIRABLE

cost what it will, and those Business men who are up and doing, *Manufacturers* of Implements for Farmers, Sellers of Live Stock, Seeds, Plants, Trees, Garden Tools, Agricultural Books, &c., &c., should now be ready to send out their messages and let our people know what they have to sell.

The CALIFORNIA FARMER now enters upon its

THIRTY-SIXTH VOLUME,

and can give to all a BETTER CHANCE for PURCHASERS than any other medium, as we go *directly to those* who would purchase.

New Yorkers can send their advertisements to our Advertising Agents, G. P. Rowell & Co., others directly to us. See Terms in our Columns.

Address WARREN & CO.,
320 Clay st., San Francisc.

THE

HOWE SEWING MACHINE CO'S

Sewing Machines

Have become celebrated the world over. The work done by these Machines is unsurpassed, sewing the thinnest material and the heaviest goods with equal facility, and requiring no extra adjusting for uneven thickness or passing over seams.

THE ATTACHMENTS

For Hemming, Felling, Braiding, Cording, Quilting, Tucking, Binding, and Gathering,

Are of the Latest Improved Patterns, and are superior to those used on any other machine.

THE HOWE MACHINES

Are the Strongest and Simplest, and seldom or never give any trouble in operating.

The Howe Sewing Machines

Are the oldest established in the world (Mr. Howe being the original inventor) and are in advance of all others in improvements and perfection of mechanism. They have invariably won the highest honors at the great exhibitions of the world, and are universally acknowledged to be the best in use.

COUNTRY CHILDREN.

Little fresh violets,
Born in the wild wood;
Sweetly illustrating
Innocent childhood;
Shy as the antelope—
Brown as a berry—
Free as the mountain air,
Romping and merry.

Blue eyes and hazel eyes
Peep from the hedges,
Shaded by sun-bonnets,
Frayed at the edges!
Up in the apple trees,
Heedless of danger,
Manhood in embryo
Stares at the stranger.

Out in the hilly patch,
Seeking the berries—
Under the orchard trees,
Feasting on cherries—
Tramping the clover blooms
Down 'mong the grasses,
No voice to hinder them,
Dear lads and lasses!

No grim propriety—
No interdiction;
Free as the birdlings
From city restriction!
Coining the purest blood,
Strength'ning each muscle,
Donning health armor
'Gainst life's coming bustle.

Dear little innocents!
Born in the wild wood;
Oh, that all little ones
Had such a childhood!
God's blue spread over them,
God's green beneath them,
No sweeter heritage
Could we bequeath them?

OLD AGE.

Fling down the faded blossoms of the Spring,
Nor clasp the roses with ungrateful hand;
The joy of Summer is a vanished thing;
Let us depart, and learn to understand
The gladness of great calm—the Autumn rest,
The peace of human joys the latest and the best!

Ah! I remember how in early days
The primrose and the wild flower grew beside
My tangled forest paths, whose devious ways
Filled me with joys of mysteries untried,
And terror that was more than half delight,
And sense of budding life, and longings infinite.

And I remember how, in life's hot noon,
Around my path the lavish roses shed
Color and fragrance, and the air of June
Breathed rapture—now those Summer days are fled;
Days of sweet peril, when the serpent lay
Lurking at every turn of life's enchanted way.

The light of Spring, the Summer glow, are o'er;
And I rejoice in knowing that for me
The woodbine and the roses bloom no more;
The tender green is gone from field and tree;
Brown barren sprays stand clear against the blue,
And leaves fall fast, and let the truthful sunlight through.

For me the hooded herbs of Autumn grow;
Square-stemmed and sober; mint and sage,
Hoarhound and balm—such plants as healers know;
And the decline of life's long pilgrimage
Is soft and sweet with marjoram and thyme,
Bright with pure evening dew, not serpents glittering slime.

And round my path the aromatic air
Breathes health and perfume, and the turfy ground
Is soft for weary feet, and smooth and fair
With little thornless blossoms that abound
In safe dry places, where the mountain side
Lies to the setting sun, and no ill beast can hide.

What is there to regret? Why should I mourn
To leave the forest and the marsh behind,
Or toward the rank, low meadows sadly turn?
Since here another loveliness I find,
Safer and not less beautiful—and blest
With glimpses, faint and fair, of the long-wished-for rest.

And so I drop the roses from my hand,
And let the thorn pricks heal, and take my way
Down hill, across a fair and peaceful land
Lept in the golden calm of dying day;
Glad the night is near, and glad to know
That, rough or smooth the way, I have not far to go.

WARM BATHS.

The *Family Journal* thus speaks of the value of the *Warm Baths* as a disinfecting security:

"The warm bath is a grand remedy, and will often prevent the most virulent diseases. A person who may be in fear of having received infection of any kind, should speedily plunge into a warm bath, suffer perspiration to ensue, and then rub dry, dress securely to guard against taking cold. If the system has imbued any infectious matter, it will be certainly removed by this process, if it be resorted to before the infection has time to spread over the system; and even if some time has elapsed, the drenching perspiration that may be induced in a hot bath will be pretty sure to remove it."

HARPER'S BAZAR.

This splendid FASHION MAGAZINE may not only be classed as one of the most splendid *Illustrated Fashion Magazine*, but also as a "Literary Magazine" of very high merit, and creditable indeed to the great "House of the Harper's" for the true *Independence* of its pages, for while it discourses upon the latest fashions and pictures them on its pages, it does not fail to *point out* the *evil results* that follow by adopting those which are alike injurious to the Physical as well as Intellectual and Moral powers of human beings.

We give the following admirable Essay published in one of its recent numbers under the caption of

Too Nice.

We have all heard of the story of the foolish Midas, whose wish, that every thing he touched might be turned into gold, was gratified. He soon repented, as we learn, of the fatal generosity of the gods when the very bread and meat changed at his lips to the precious metal. That Midas' ears finally grew into those of an ass was the fit termination, and not the most incredible part of his history.

We can discover among us some of the descendants of Midas without even a look at their ears. Their asinine propensities are enough to point them out without any other indication of their race. We may pass by, for the present, the more characteristic of their kind, and examine some of the less marked specimens.

It is wonderful how people systematically deprive themselves of many of the enjoyments and comforts of life by turning things which are intended for use into mere articles of finery. There surely can be nothing more Midas-like than this practice, which often prevails to such an extent as to convert the utmost abundance into total destitution. Labor is performed and money spent without stint, and yet with no other result than restricted ease and diminished comfort.

You can trace the practice every where, throughout all the course of daily life. It is visible in the dwelling, the furniture, the books, the equipage, the clothes. Most people, in our large cities at least, have bigger and finer houses than they can well use, take care of, or pay for; and daily living in a house without ever feeling at home is of all wretchedness the most wretched. The furniture, moreover, is often too nice for use, the carpet too delicate to be trod by the common boot, the chairs and sofas of too choice a stuff for close proximity with the every-day coat and gown. The best room in the house is thus not seldom made the worst for the family, for every member regards it as he might a chamber of horrors, into which he does not put his foot without fear and trembling.

There is many a man who keeps a carriage too fine for use, and dreads every time he rides in it the approach of a shower or a dirt-cart. At night he is forced to submit to the democratic street car or omnibus, for darkness conceals and endangers the finery of his own equipage.

There are some who boast of their libraries, and yet live themselves, and keep others, in ignorance, because their books are too nice for use. Their gilt edges and choice bindings are only safe under glass, lock and key; so they remain sealed to the curious, and might as well be so many *dummies* of wood, such as, in fact, are occasionally found filling up the vacant places of the shelves in the book-cases of grand libraries.

There are a thousand ways in which the clothes originally, without doubt, intended for comfort and protection are turned into sources of annoyance and danger. Obedience to fashion and a desire for show have metamorphosed the essential coverings of the body into so many corporeal tortures. The hard-bound beaver hat and chignon, the spider waist and tight-bodied coat, the pinching boot and high heeled shoe, are but a few of the various instruments of suffering which man and women have contrived to make out of the simplest articles of clothing. Human and civilized though such people pretend to be, it is not difficult to descern through all their artifices of dress the asses' ears of the Midas breed. Whatever might be useful they turn by their touch into the showy and inconvenient.

Children even, in spite of the earnest supplications of nature, are not spared this absurd and cruel process of transforming the useful into the showy. The desire for display is apparent in their education, their manners, their dress, and daily walks. Is it the purpose of most of the so-called accomplishments of the girls' school to produce useful or showy women? Are the minoing ways and tricks of behavior so carefully inculcated intended to make children genteel, as it is called, or amiable? Is the dress of a kind or a make suitable for freedom of movement, so essential to the healthy development of the young, or adapted only to the stiffness of formal presentation to company? Are the promenades of the starched and bedizened child for the promotion of its health, or the gratification of a mother's vanity and love of display? While we commend to all propriety of conduct and delicacy of taste, we would warn them against being too nice.

EARN WHAT YOU SPEND.

Three-fourths of the difficulties and miseries of men come from the fact that must want wealth without earning it, fame without deserving it, popularity without temperance; respect without virtue, and happiness without holiness. The man who wants the best things, and is willing to pay just what they are worth, by honest effort and hard self-denial, will have no difficulty in getting what he wants at last. It is the men who wants goods on credit that are snubbed and disappointed and disappointed and overwhelmed in the end. Happiness cannot be bought by the bottle, nor caught up by the excursion train, nor put on with any robe or jewels, nor eaten at any feast. It does not exist in any exhileration, excitement, or ownership, but comes from the use of the faculties of body and mind.—*Scientific American.*

ABOUT THE RATTLESNAKE.

As this snake is closely allied to fishing and shooting and among the disagreeables of these sports, we will say what we have to say about it in this department of the Telegraph. We read so many sensational statements in connection with it, going the rounds of sensible journals, that it is well something like the truth should be spoken. The last story is that a little girl, a nine year older, encountered one of these deadly reptiles and had a regular battle with it, and won it by stamping the life out of it! This snake, according to the account, came out of the bushes after the heroine and chased her; and she, unable to find anything else to defend herself, commenced kicking it with her shoes, and a regular conflict, ensuing, ending, as we have already said, by the child watching her opportunity and stamping upon its head and holding her foot there until it breathed its last!—Now, those who understand the habits of the rattlesnake, know how improbable, nay, absurd this is. They know that it never pursues any one; never lies in wait, like the copperhead-snake, for any one; on the contrary that it retires from a person approaching, unless suddenly coming upon it before it has time to do so. But when once within reach of an intruder it coils in a moment and strikes like a flash of lightning, and in doing so propels itself a little over half its length. The person, young or old, who would attempt to kill it with the foot would soon be cured of the folly.

A journal now before us says that in August, when the snake is shedding it skin, it ceases to rattle when approached, also that the warning given by its rattles has saved many a life. This is not according to our understanding of the use made of the rattles. They are not used as a warning, but only when the reptile is angry from being disturbed and is crawling off. If any moving object is seen approaching where it is lying, it will slowly move out of the way and rattle as it does so. It cannot crawl fast. But if a person or animal suddenly steps near it unseen, it strike *first* and rattles *afterwards*. It never rattles beforehand unless pursued and forced to coil and prepare to defend itself. We have heard more than once the rattles from six to ten feet off, not before us but at our side, the snake having heard us coming moved out of our way and told us so. A gentleman residing at the foot of the Alleghany mountains, on the line of the Pennsylvania Railroad, who seemed to be perfectly familiar with the habits of the rattlesnake, told us that he killed five in the road while traveling from Spanglerville to Tipton, a distance of sixteen miles, on a hot clear day in June, after a long cool rain-storm. He said they never rattled before striking, except as we mention above, but always afterwards; that a person was seldom bitten; and of the hundreds of women and children gathering berries on the mountain it was a rare occurance for one to be bitten, and the wound was not necessarily fatal. The rattlesnake would always get out of the way if possible, and only struck when suddenly encountered. People where these reptiles abound fear them very little, while the copperhead snake was always an object of dread to them, because it infested beaten paths and laid in wait for its victim.—*Germantown Telegraph.*

INTUITIVE PERCEPTIONS OF WOMEN.

In a conversation I once held with an eminent minister of our church (says Dr. Boardman) he made this observation: "We will say nothing of the manner in which that sex usually conducts an argument, but the intuitive judgments of women are often more to be relied upon than the conclusions which we reach by an elaborate process of reasoning." No man who has an intelligent wife, or is accustomed to the society of educated women, will dispute this. Times without number you must have known them to decide questions on the instant and with unerring accuracy, which you had been poring over for hours, perhaps, with no other result than to find yourself getting deeper and deeper into the tangled maze of doubts and difficulties.

The inference, therefore, is unavoidable, that the man who thinks it is beneath his dignity to take counsel with an intelligent wife stands in his own light, and betrays that lack of judgment which he tacitly attributes to her.

It were hardly generous to allege that they achieve these feats less by reasoning than by a sort of sagacity which approximates to the sure instinct of the animal race; and yet there seems to be some ground for the remark of a witty French writer, that when a man has toiled step by step up a flight of stairs he will be sure to find a woman at the top, but she will not be able to tell how she got there. How she got there, however, is of little moment. If the conclusions a woman has reached are sound, that is all that concerns us. And that they are very apt to be sound on the practical matters of domestic and secular life, nothing but prejudice or self-conceit can prevent us from acknowledging.

JOHN WESLEY'S WAY.

When John Wesley saw a young man in danger of falling into the snares of evil associates, he did not watch him sharply at a distance and speak of his shortcomings to others, predicting that he was "on the high road to ruin." He invited him to his table, and by a gentle, affable manner, sought to give him good subjects for thought, or hints for conduct. Advice thus hospitably enforced was very impressive. He would draw out the young man in conversation, and learn what studies he was most proficient in, which was most essential to his success, and then assist him to acquire a mastery over them. Another most valuable way of aiding a young man whom social danger threatened, was to make him acquainted with well disposed, religious young men, who would lead him into good paths. He watched over their future career with a father's interest and tenderness, and in a very simple manner accomplished a vast amount of good, besides preventing a world of evil.

TOO POOR TO TAKE A NEWSPAPER.

The editor of the *Rural New Yorker* was sitting in his office one afternoon some years ago, when a farmer friend came in and said:

"Mr. Moore, I like your paper, but times are so hard I cannot pay for it."

"Is that so, friend Jones? I'm very sorry to hear that you are so poor; if you are so hard run I will give you my paper."

"Oh, no! I can't take it as a gift."

"Well, then, let's see how we can fix it. You raise chickens, I believe?"

"Yes, a few, but they don't bring anything, hardly."

"Don't they? Neither does my paper cost any thing hardly. Now I have a proposition to make to you. I will continue your paper, and when you go home you may select from your lot one chicken, and call her mine. Take good care of her, and bring me the proceeds, whether in eggs or chickens, and we will call it square."

"All right, brother Moore;" and the old fellow chuckled at what he thought a capital bargain. He kept the contract strickly, and at the end of the year found that he had paid about four prices for his paper. He often tells the joke on himself, and says he never had the face to say he was too poor to take r paper since that day.

TIME IMPORTANT.

Never "kill time," boys. He is your best friend. Use him well. Don't let him slip through your fingers when you are young, as the beggar did. The days of your boyhood are the most precious you will ever see. The habits you get into will stick to you like wax. If they are good ones, life will be a pleasure, and above all, a success. I mean a true success. You may not grow rich, but your life will be a real success, nevertheless.

If, on the contrary, you waste your early years, live for fun only, trifle with your opportunities, you will find after a while that your life is a failure—yes, even if you should be as rich as Croesus.

One of the saddest things is to meet a man who has let golden opportunities go by him, just entering the battle of life, yet entirely unfit for his position. He is to be pitied, yet blamed. In this favored land every one can learn to read and write, for instance. But how often we meet young men utterly unable to write a dozen lines without making mistakes! Be assured, my young friends, it will be a source of shame to you as men, if you do not pay attention to education as boys.

The world is full of good books to read. You are surrounded with friends and relatives. Be warned in time, and coin happiness and honor in the future from the industry of the present, and you will not have read this page in vain.—*Merry's Museum.*

A PARLOR VINE.

To grow a pretty vine from the sweet potato, put a tuber in pure sand, or sandy loam, in a hanging basket, and water occasionally. It will throw out tendrils and beautiful leaves, and will climb freely over the arms of the basket, and upward toward the top of the window. Not one visitor in a hundred but will suppose it to be some rare foreign plant.—*New York Horticulturist.*

It is said that during his ministry of fifty years, Dr. Tyng's congregations have contributed over $3,000,000 for benevolent objects, besides raising $600,000 for the building of four churches and six chapels.

A glorious Benevolent people that, their hearts were made to Tyng-le with the right feeling by their honored preacher.

A young man says that there may have been such a thing as real true love in olden times, but that now the notion is entirely obsolete; and if you ask a young lady now-a-days to share your lot, she immediately wants to know how large that "lot" is.

ORGAN.

What they are thought of by the leading organists of the Pacific Coast:

"Superior to any instrument of their kind."
Mr. GEO. T. EVANS, the well known Organist of the Church of the Advent, S. F.

"Recommend the Burdett for superiority of tone, delicacy and power, and in every respect far ahead of all other reed instruments."
Mr. S. D. MAYER, Organist of St. Johns Church, Oakland, Cal.

"After trying the Burdett, I take great pleasure in adding my voice to the many already sounding their praise."
Mr. H. M. BOSWORTH, Organist of Calvary Church, S. F.

"Far ahead of all I have ever heard or tried."
T. W. C. RHIND, Organist of Howard Street M. E. Church, S. F.

"Examining the "Burdett Organs" I was greatly and agreeably surprised at finding such variety, delicacy and power."
R. J. McCABE, Organist St. Francis Church, S. F.

"Consider the Burdett the finest of reed organs"
CHAS H. HOFFMAN, Organist of the Mazar Street Synagogue.

"The most effective reed instrument for Church, School or Parlor"
J. MULLER, Organist St. Ignatius Church, S. F.

"A decided novelty and great improvement on the many styles now in use."
GEO. SCHUCKE, Organist of the Methodist Church, San Jose.

"Surpassed my expectations of a reed instrument and comprises everything needed from the solemn music of the church to the popular music of the day"
EVERETT POMEROY, Organist of the Presbyterian Church, San Jose.

"They excel anything of the kind I have ever seen before."
Mr. JAS. R. LAWRIE, Santa Clara

"Their volume and purity of sound is far superior to any reed instrument I have ever seen, and combinations most perfect."
D. H. BERLIN, Professor of Music, Stockton.

"The combinations, power and delicacy in all cases are surprising, and I cheerfully recommend the Burdett."
W. CARMICHAEL, Organist of St. Marys Church, Stockton.

☞ Our descriptive price list now ready. Schools, Churches, Lodges, etc., will be dealt liberally with, and accommodation extended to responsible buyers. Address Chas. Grau's Music Store, Agency for the Pacific Coast, 623 and 625 Clay Street, San Francisco.

MILLS' SEMINARY.

REV. C. T. MILLS AND WIFE, FOR THE PAST six years Principles of the Young Ladies' Seminary at Benicia, are happy to announce to their patrons and friends that the next term of their well-known Institution will open

Wednesday, Aug. 2d,

In their NEW, COMMODIOUS AND BEAUTIFUL BUILDING just completed at

SEMINARY PARK, BROOKLYN.

As most of the able and experienced corps of teachers, with valuable accessions, as well as the fine classes of pupils now pursuing their studies, remove with them, the school remains essentially unchanged.

With greatly increased facilities for physical comfort and intellectual culture, and without additional expense, Mr. and Mrs. Mills believe they can accomplish much more for their pupils in the future, than they have been able to do in the past, and that their Institution offers unrivalled advantages for a thorough and finished education.

All communications relating to admission, and all letters of inquiry, should be addressed to

REV. C. T. MILLS, D. D.,
35.28 Brooklyn, Alameda county, California.

Santa Clara College, S. J.

SANTA CLARA, CAL.

Conducted by the fathers of the Society of Jesus

THE TWENTY-FIRST ANNUAL SESSION OF THIS Institution will commence on MONDAY, August 7th 1871

TERMS—Tuition in the Classical and Scientific Departments; Boarding and Lodging; Washing and Mending of articles; School Stationery; Medical Attendance and Medicines; Fuel, Light, Baths, etc., per session of Ten Months.....$250

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Maraschi, S. J., St. Ignatius Church, Market street, between Fourth and Fifth, San Francisco.

Purchasers of Bees can have all information on this subject by applying at the FARMER OFFICE. Terms liberal.

Miscellany.

STORM-WARNINGS IN THE OLDEN TIME.

The attempt to presage great weather phenomena is nothing new.

From time immemorial civilized society has sought after a plan for averting the violence of the storm and tempest as anxiously as it has sought to resist the deadly approach of the pestilence and the plague.

The Great Plague of London, historians tell us, carried off in a year about 90,000 persons. This was, however, in the rude and undeveloped condition of medical science, when the metropolis of England had but few hospitals, and every victim was left in his own house to spread and speed the march of the contagious foe. Appalling as such mortality seems for the *year* 1665, amidst the wretched and squalid dens of the London poor, it has been overshadowed in modern times by a greater calamity. On the 5th of October, 1864, the storm which swept over Calcutta destroyed, *in a single day*, over 45,000 lives! Yet this is but one of a large number of similar occurrences rivaling in magnitude the great Indian disaster.

The give forwarning of approaching tempests on the coasts of the Adriatic, the Italian and old Roman castles, as described by an antique writer, had on their bastions pointed rods, to which, as they passed, the guards on duty present the iron points of their halberds, and whenever they perceived an electric spark to follow, they rang an alarm-bell, to warn the farmer and fisherman of an approaching storm. It is interesting to note that this ancient Italian custom was widely spread over the earth in former ages. And it is not difficult to connect it with those old towers (not only in Ireland, Scotland, and Spain, but in Africa and the East, Upper India and China) in which the use of a similar conductor may have been one among the many objects of those relics of the past.

But as the title of our articles shows, a new element of science has been introduced—the electric telegraph—an invention whose mission of usefulness is destined to unlimited enlargement.

In November, 1853, while the Anglo French fleet was operating in the Black sea against the stubborn walls of Sebastopool, the tidings flashed across the wires that a mighty tempest had arisen on the western coast of France, and, by the warning of the barometer, was on its way eastward. The telegram was sent, by the French Minister of War, Marshal Vaillant, from Paris, and reached the allied fleet in good time to enable them to put to sea before the cyclone could travel the five hundred leagues of its course, and disperse or destroy the most splendid navies that ever rode those waters. The storm came with a fatal punctuality to the predicted hour. The Crimea, shaken, ravaged, scourged by its fury, presented every where a scene of havoc and ruin in the allied camp more fearful than any the fire of all the Russian forts combined could have inflicted. It is perhaps not too much to say that, but for that telegram and its timely storm warning, the congregated navies, far from home and shattered to pieces, could not have sustained the besieging armies, and the event of the great Eastern war might have been different from what it finally was.

So happily, in this instance, did theory (too often despised) blend with fact, that the French War Minister said, "it appears, that by the aid of the electric telegraph and barometric observations, we may be apprised several hours or several days of great atmospheric disturbances, happening at the distance of 1000 or 1500 leagues."

Less than three years after the occurrence of the famous "Black Sea storm," just mentioned, there appeared for the first time, and in an American paper, a formal proposition for the establishment of a general system of daily weather reports by telegraph and the utilization of that great invention for the collection of meteorologic changes at a central office, and the transmission thence of storm warnings to the sea ports of the American lakes and our Atlantic sea board.

"Since great storms," says Mr. Thomas B. Butler, in his work on the "Atmospheric System and Elements of Prognostication," have been found to observe pretty well defined laws, both as respects to motions of the wind and the direction of their progress, we may often recognize such a storm, in its progress, and anticipate changes which may succeed during the next few hours. When it is possible to obtain telegraphic reports of the weather from several places in the valley of the Mississippi and its tributaries, we may often predict the approach of a great storm twenty-four hours before its violence is felt at New York."

On the coasts of the Kingdom of Italy mariners are forewarned that a storm threatens them by a red flag hoisted on all the towers and light houses of the principal localities, ranging from Genoa to Palermo, and thence up along the Adriatic. On the most dangerous points of the coast of England where the fishing-boats and small craft that perform the service of the coast are exposed to formidable gales even during the most promising season, barometers put up by the Meteorological Bureau are at hand to warn the seamen of bad weather.—From "The Telegraph and the Storm," by Prof T. B. Maury, in *Harper Magazine for August.*

POPULATION OF THE GLOBE.

The number of humans now on our Terrestrial Ball is computed by the latest and best authority at 1,350,200,000; in America, 72,800,000; in Europe, 287,000,000; in Asia, 798,600,000; in Africa, 186,000,000; in Australia and Polynesia, 3,800,000—the people speak about 3,600 different languages, and are cut up into 1,000 different religious sects. The adherents of the principal religions, counting the whole population, are supposed to be nearly thus:—Greek church, 69,602,700; the six other Oriental churches, 6,500,000; Roman Catholics, 195,000,000; Protestants, 98,139,000; Mohamedans, 160,000; Buddhists, 340,000,000; other Asiatic religions, 260,000,000; Pagans, 200,000,000; Jews, 6,000,000.

A STEAM TYPE-SETTER.

SOMETHING THAT WILL "SET TYPE" FOR THREE PENCE PER THOUSAND.

One invention, however, did interest me: it was a steam type-composing machine. A Mr. Mackie of Warrington, had patented this affair, and it is now used in several printing offices, among others that of The Graphic, in London. The invention consists of two machines. One of these is a small one which has a key-board, like a piano, of fourteen keys. The operator sets before him the copy which is to be put in type, and manipulates the keys, whereupon there is unrolled from beneath an interminable strip of paper, two inches wide, is full of punctures. Each one of these punctures correspond with a letter of the written copy. The whole manuscript having thus been copied in punctures, the roll of punctured paper is set in a machine that looks like an iron center-table. The top of the center-table has all around on its edge little boxes containing type. The top of the table then revolves. The punctured paper runs around, and when a certain type needed is reached, a little lever falls (by reason of the opening allowed one end of it by the hole in the paper), the other end touching and selecting the letter that is needed. The type so selected falls into place, and the row of selected type pours in continuous stream out upon a regular composer's stick, which as fast as it is filled, is removed to the form. This may all seem complex in the description, but it seems wonderfully smooth and simple when seen. A man engaged at the perforator, and three boys at the composer to feed the boxes with type and space out the lines, set up a newspaper column large as one of the *Times* in one hour, which Mr. Mackie maintains is equal to the composition of eight men. It economizes 50 per cent. of outlay. The inventor has been ten years on it, and has now certainly gained a success. When our commercial houses have Babbidge's calculators instead of clerks, and our newspaper offices have revolving center-tables instead of compositors, why should not Mr. Carlyle's dream of an iron automatic Prime Minister be realized? The Republicans of England will do the handsome thing by any Yankee who will invent an automaton Queen that can sign her name and not have a large family. To return to Mr. Mackie for a moment, I may add that his machine costs £500, and the inventor advertises that he is prepared to undertake type-setting for one year in any house, that purchases, at three pence per thousand (whatever the size of type), set in eighteen inch lines. Mackie is proprietor of the Warrington *Guardian*, the largest paper in England, equal to 112 colums of the *Times*, and it certainly is set up very neatly set up by machine, all varieties being used—small pica, minion, and nonpareil.

SQUARE KNOT TIED BY A MACHINE.

Mr. Proviso A. Parry, of Perth Amboy, N. J., has presented a device, through the agency connected with this establishment, which ties a square knot precisely like that make by hand.

Those who have had any experience with self-binding mowing machines will at once understand the value of this invention, which, so far as we know, is the only one which accomplishes the feat. It will tie the strings around the sheaves as they are made by the reaping machine, and thus enable the farmer to dispense with the expense of one man and relieve the team of his weight. The nearest approach previously made to accomplishing tying by machinery consisted, we believe, in twisting the ends of the string or wire together and tucking them under the band. A reaping-machine may now to made to deliver sheaves tied up which will require as little attention as the mowing-machine—all the work being performed by the machine itself.—*Manufacturer and Builder.*

Valuable Stock Ranch

FOR SALE—A BARGAIN.

A Large and Valuable and well located Ranch of FOUR THOUSAND ACRES, all fine level land and well adapted to Wheat and Grain-growing or pasturage of Stock, here, even in this dry season the feed is good, and animals upon it are now doing well

There is now on the Ranch 3500 Sheep, four Horses, four Cows and Heifers, together with Wagons, Plows and every Farming Implement needed to carry on the Ranch.

The Ranch is situated 23 miles south of the New Town, recently located by the San Joaquin Valley R. R. Co., on Bear Creek, directly on the line of the Railroad The work between said New town and Modesto is rapidly approaching completion and Cars will be running to Bear Creek in thirty days.

There is upon the Ranch a Good House, Barn, Wells of Water, all fenced in. The Ranch, with all improvements, will be sold at a VERY GREAT BARGAIN as the owner desires to change his location, having other business to attend to.

The Sheep will be leased on shares as agreed upon

The terms of Sale will be ONE-THIRD CASH, balance one and two years, interest at 10 per cent. per annum

To any person who desires to engage in STOCK-RAISING or GENERAL FARMING, this is an opportunity rarely to be found. Early application will secure a great bargain, as the whole will be sold at the nominal value of unimproved lands.

For Particulars Address,

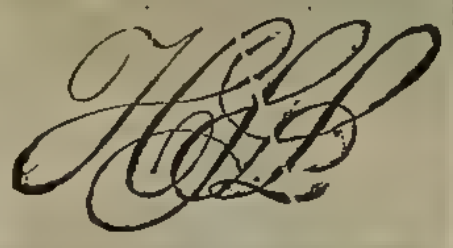
HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE



This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Gum or Dumb,

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 300 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

GALLERY OF NATURAL HISTORY AND SCIENCE!

Eureka Theatre, Montgomery Street.

This truly elaborate and magnificent collection of all that is strange, wonderful and curious in SCIENCE, NATURAL HISTORY, AND ART, is now open to the public.

Extensive embellishments and improvements have been made. The additions will include an immense collection in BOTANY, ICTHYOLOGY, and ENTOMOLOGY.

COMPARATIVE, FLORAL, AND BOTANICAL ANATOMY will be largely illustrated, and form a leading feature of the institution. Every exertion has been used to render this superb collection the most INSTRUCTIVE, AGREEABLE, and USEFUL IN THE WORLD.

INSECT AND ANIMAL LIFE will be beautifully displayed and the celebrated Du Chaillu GORILLA which was exhibited ALIVE in Paris, has been added to the already vast collection of HUMAN AND COMPARATIVE ANATOMY.

Open from 7 to 9 P. M. Sundays from 2 to 5 P. M.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf, or landing places.

Corrected Weekly, by Edwin Parmer.

San Francisco, August 31.

Money and Exchange Table.

Exchange on England	110¼@110¾
Price of Gold	112⅝
Value of Greenbacks	90@91
Value of Wheat in Liverpool	11s 6d
do do New York	160@165 bush

Price of Money in Eastern Cities.

New York—Money very abundant and rates as low as 2@3 per cent. per annum on call, at 4@5 on time paper.

Boston—Money very plenty, 3@5 per cent. on call, 5@6 on time.

Chicago—Money capital employed 4@5 per cent. on call, 6@8 on time.

Money in England.

Bank of England rates 2½@3½ per cent, heavy supplies, money very easy in business circles.

Money in France.

Money in the form of Gold is now showing very abundantly, the people among the lower classes offering Government all it wants to pay the Prussian indemnity.

GRAIN AND FLOUR MARKET.

The Wheat and Flour market is more active this week "At Home" than for some time past. The sales however are all for Home except Flour for China. The Foreign demand remains nominally nothing by reason of the low rates prevailing in Europe, although the last Liverpool rate advances price One penny. This fact, however, is of no account as the rates there make it impossible to ship without loss, and the prospect of a good crop in Europe is now very good.

Barley, Oats, and Corn are selling steadily, demand for these may be said to be good and rates firm.

Hay and Feed stuffs somewhat active, so as to take what is arriving pretty steadily.

Potatoes quite active, Onions do., and lesser products are coming in freely and supplying all demand.

Retail Prices in the Fruit Market.

The show of Fruit is better this week; a larger variety and better quality. Peaches come in from the mountains and some fine lots. Bartlett Pears show now fine with other good sorts. Apples of nice kinds and in improved quality of many varieties, there is an abundance of almost everything, and the orchard trees in the country are loaded with fruit, in some places more than can be marketed.

FISH.

Larkins & Catania.

The Fish market enlarged in supply, for the demand and sale is increasing. Our market now offers almost all the kinds found in any market abroad in addition to our great variety.

Since Larkins & Catania have added their new Ice House to Stalls 101 x 102 California Market, all the kinds of Fish that Epicures demand, will be regularly kept at this stand, such as Shad, Rels, Halibut, &c.

Shell Fish.

Solomon Tesmore,

57, 58, 59, California Market.

The "Shell Fish" trade is also on the increase. The sale of Oysters, Craw Fish, Crabs and other kinds have largely increased in the last two or three months We were informed by Mr. Tesmore at the "Bivalve Stand" 57 x 59 California Market, that they are now doing a trade in oysters that require them to open 8000 oysters per day and Saturdays about 12000, this besides wholesale trade. What oyster eaters we are!—this is but the trade of one dealer.

Oysters, ₩ 100	1 00	@	1 25

Sheaves of Grain.

As the present Season will offer many interesting and valuable samples of Grain of all kinds, we shall feel greatly indebted to our subscribers, and all interested in our Grain Crop, for Sample Sheaves of Wheat, Barley, Rye and Oats, and any other Samples of this year's products.

We will cheerfully repay them for their kindness and attention, will send them in return choice Seeds to more than the value, and also pay all expenses of transmission per Wells, Fargo & Co.

Cultivators in such cases can command our services for a full reciprocity.

Address, WARREN & CO.,
California Farmer Office,
320 Clay Street, San Francisco.

GOLDEN EAGLE HOTEL,

Corner Seventh and K streets,

SACRAMENTO.

THIS HOTEL IS OFFERED TO THE PUBLIC AS a "Home for Families" and for the Traveler.

The Proprietor has spared neither expense or care to make his Hotel one that shall always be acceptable and pleasant to all that may favor him with a call.

With ample accommodations by means of spacious Suites of Rooms for Families, and by recent enlarged accommodations, he is confident that visitors will always be satisfied and feel at Home.

Particular attention will always be paid to the comfortableness of the apartments by well ventilated Rooms, clean Beds and Bedding, and strict attention to the wants of Boarders; while the TABLES will be provided with the very best the season affords.

The Hotel has been greatly enlarged during the past year, to more than double its former size, with splendid suits of Rooms, and is entirely refurnished in the best style.

Carriages, to and from the Hotel to the Railroad Cars and Steamers, at all times, Free of Charge to the Patrons of the Hotel. Hotel open all night.

D. E. CALLAHAN,
353 PROPRIETOR.

Auzerais House,

SANTA CLARA STREET,

SAN JOSE.

The undersigned for seven years connected with the Occidental Hotel of San Francisco, having taken this Hotel, and having had it thoroughly refitted and furnished with many improvements, feels confident he can invite all Travelers to the Auzerais House, as a place where all will find Rest, Enjoyment and a Home.

No expence or pains has been spared to make it one of the best kept Hotels in the State.

H. S. GREELEY, Manager.

Auzerais House Coach and Carriages in attendance on all Trains.

The California Farmer,

THIRTY-SIXTH VOLUME.

Every Thursday and Mailed Friday's at $4 per year in advance, when payments are delayed $1 will be added.

REDUCTION IN PRICE

AND

Liberal Club List.

With a desire to place the CALIFORNIA FARMER in every family on this Coast we have concluded to make a

Liberal Reduction in Price,

and to place it at such a sum as that every Cultivator of the soil could have it.

We have announced the Terms in another column, and here we give additional inducements to our patrons and friends to not only subscribe for the Farmer, but to secure other valuable Publications at a moderate price also.

We make this announcement for the express purpose of meeting the wants of a large increasing Agricultural population, and a large emigration that will soon be coming to our shores, who need the information of our resources, and we feel we can serve our State in no better way than to give to these new comers the

CALIFORNIA FARMER

at a very reasonable sum, so that every family can have a copy.

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar,	$13,50
The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid	$7,00
The CALIFORNIA FARMER and the New York Weekly Tribune,	$5,50
The CALIFORNIA FARMER and the American Agriculturist,	$5,00
The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life,"	$6,00
The CALIFORNIA FARMER and the Phrenological Journal of New York now in its 50th Volume,	$6,00
The CALIFORNIA FARMER and the American Stock Journal,	$5,00

THE TRUE LIBERTY.

Henry Ward Beecher in one of his recent sermons thus speaks of the Orangeman's Processions and their import. The Rev. Orator has touched the right chord, that is the spirit of Liberty. He says:

"The Orange societies should parade next week without a banner less or one inscription rubbed out. They should not do it on an implied promise that if protected once they will then do it no more. They ought to move through the streets of New York until nobody thinks of molesting them. When that time arrives it will be a matter of no public importance whether their annual procession is kept up or not; but as long as a dog wags his tongue against an Orange procession, or a bewildered magistrate forgets his duty toward them, public good requires their continuance. If the Orangemen, of New York wait until next year to march through the streets of the city, they will betray a sacred duty. By accident they have become the representatives of a principle which lies at the foundation of modern civilization. They do not now represent a spent fact in history, but a living principle. It is not the battle of the Boyne in Ireland, but a question of liberty in New York."

PROFESSOR TYNDALL AS AN INVENTOR.

Professor Tyndall, who has given of late great attention to the floating solids and vapors in the atmosphere has shown how many diseases arising from the inhalation of these materials may be avoided. He has found that cotton wool enfolded in a little muslin, and placed over the mouth and nose, effectually filter the air of noxious dust and floating germs. As an illustration of the effectiveness of this simple device, he, in a recent lecture, related the following anecdote:

"I went some time ago into a manufactory in one of our large towns, where iron vessels are enamelled by coating them with a mineral powder, and subjecting them to a heat sufficient to fuse the powder. The organization of the establishment was excellent, and one thing only was needed to make it faultless. In a large room a number of women were engaged covering the vessels. The air was laden with the fine dust, and their faces appeared as white and hoodless as the powder with which they worked. By the use of cotton-wool respirators these women might be caused to breathe air more free from suspended matter than that of the open street. Over a year ago I was written to by a Lancashire seedsman, who stated that during the seed season of each year his men suffered horribly from irritation and fever, so that many of them left his service. He asked me if I could help him, and I gave him my advice. At the conclusion of the season this year he wrote to me that he had folded a little cotton-wool in muslin, and tied it in front of the mouth; that he had passed through the season in comfort, and without a single complaint from one of his men."

A grand convention of all the brass bands in the State, is to be held at Rutland, Vt., some time during the Summer.

A HOOK NOSODY COULD "BARE"—Theodore Hook.

LETTER FROM AN OLD CALIFORNIAN AT THE EAST.

NEW SERIES.

LEAVES FROM MY JOURNAL.

BY M. A. DARLEY.

NO. FOUR.

PARIS AND MONOCRACY.

MY DEAR FARMER—I said to my friend as we sat in the cosy blue parlor of the Fifth Avenue Hotel, "I will show you if you like to-day how much New York resembles Paris." "Let me see it is July 12," "Yes, and a walk of a few squares will bring us in the neighborhood of the Orange Procession." "Will it be safe, yes, at this hour, for it is only noon." We walked down the magnificent Avenue to Twenty-ninth Street, and there turning to the west were soon making our way through a crowd of the most ferocious and foul-mouthed men and women I have ever seen. We turned back at the Eighth Avenue at the sight of the Police force and were soon again in Broadway. While we were at lunch our conversation turned upon what we had seen. "You have long been in Paris, Dear F., what do you think of the resemblance which I have only imagined but which you must have seen." "Well, M, I did not believe that the ignorant and vicious mob of Paris *could* be equalled, but you are right. I find the mob to-day as brutal, better dressed, but worse spoken, and as much intent on mischief."

NEW YORK MAYOR AND MOBS.

"It is a shame," I replied, "that so cowardly an American as Mr. Oakey Hall occupies the position of Chief Executive of this city to-day. A Proclamation which would have brought home the sacredness of civil and religious liberty to the common mind of these men, such as I would have trusted our Irish friend in California, John Hammil to write, would have saved all the trouble, but the man who is a mere politician by trade can never see what is so simple, a man who is by turns a Whig and a Democrat, a Know Nothing, and an Anti Know Nothing shows the broad road of truth, and we shall see what a politician will do to-day. Certain it is, that New York has even a larger class than Paris, and the shame is in that here all these people are well employed and generously paid. It is to be hoped that our large now open their eyes to the duty which they have so majority of honest and law-abiding people will long neglected. The real difference, my dear F., between the mob of Paris and New York is, that in the Imperial city of France, it is the majority, while in the Metropolis of America it is in the minority."

CENTRAL PARK AND LUXURY.

After dinner we entered my friend's elegant carriage, and drove up the avenue to and through the Central Park. The afternoon was lovely, as we feasted our eyes upon the charming landscape we little thought of the scene which was being acted on the Eight Avenue. We spoke of the luxury of Paris as my friend had seen it and had in its fascination for strangers, New York resembles its unfortunate rival. Here money will buy every luxury, and even in the scanty means there are so many ways of enjoyments that we expressed the opinion that it will become year after year even to a greater extent than at present the Mecca of Americans of wealth and of cultivated tastes. My dear F., I said, "New York differs in another respect from Paris. Here there is no way of entailing large fortunes, and while the chance of accumulating money is open to all, the extravagant habits of the children soon disperses the savings of the fathers, and the fact is that the issue of many of those ignorant people we have seen this morning will occupy these magnificent mansions we have admired this afternoon, and will enjoy these luxurious drives. We have only to preserve, sacredly our civil and religious liberty, and make education imperative, and we shall not see in our day, at least, the bitter fruits of the quarrel between Labor and Capital that has given rise to the distructive vengeance of the Paris Commune. Even in our own day the Costers and the Livingstones were princes, but these have passed away, and the Stewarts, Vanderbilts, Murphy's and Sweeny's have far surpassed them and will in turn be eclipsed by the poor boys who to-day are selling "extras," or who are learning to work in our "wide fields of labor." When we reached home in the evening we learned all the sad details of the riot, and blushed to think that the cause of all the trouble was the cowardice of an American.

WANTED—A NEW MOTOR ON THE CANALS.

The State of New York offers $10,000 to the man who shall solve the problem of quickly and economically doing the immense transportation of our canals. This reward has brought out many plans, none of which have yet been successful. This season and next have been given for further trials by competitors. For the successful man a fortune and fame is waiting.

EUROPEAN.

From our Special Correspondent.

PARIS, July 15.

THE LOSSES AND TRIALS OF THE AGRICULTURAL INTEREST.

After a twelvemonth's unparalleled suffering French Agriculture commences to raise its head, and disengage itself from devastation. The least responsible for the calamities which have afflicted the country, it has had to bear the brunt of suffering. Fields desolated, stock annihilated, hands destroyed. Plagues have followed in the wake of war—the cattle disease, severe spring frosts and a wet summer. Yet French farmers have not lost heart, they demand but repose, and any form of government that will secure it. In 1869, at the Congress of Nancy, French and German Agriculturists met to cement an alliance of Peace and good will. A year afterwards the most deadly war broke out between their respective governments, which rapidly became one of races and nationalities. The seed of hatred has been sown, and its harvest has yet to be gathered. It is not the sense of defeat that the country mourns, it is the rapacity which characterized the invasion, and the commercial spirit that dictated the peace, and which render reconciliation impossible, even between French and Teutonic Agriculturists. It is in vain that Liebeg from Munich asks the French "Let us be friends," and avows that his career as a chemist dates from the friendship extended to him by Guy-Lussac, when he arrived in Paris only twenty years ago," a youth of fortune, and of fame unknown." The prisoners who have returned from Germany admit, that where they were told off as farm laborers they were remarkably well-treated.

Independent of the war indemnity to be paid the conqueror, the Agricultural community has to make good its private losses. Many farmers have only their bare fields to represent what was once a thriving concern—a happy home. Their little savings have been swallowed up in payment of local demands by the enemy. Foreign nations have generously contributed to assist the broken-down farmer in the way of supplies of seeds and manures. Much of this humane work failed, there are neither horses nor men to till the ground what life the battle spared, decimating fevers attacked, and the want of food undermined. In several departments, wide bands of land are abandoned to weeds, and such do not include the acres of battle fields, where corpses have been buried almost where found, and so rendering the breaking up of the soil under such circumstances an impossibility. The government has refused to compensate the farming classes for the ruin brought upon them by the war. France is rich, but such a work is wholly beyond her strength.

HEAVY TAXES.

To free the country quickly of the German occupation, every effort is being made to pay their gigantic bill. But this necessitates loans, and an increased revenue for the payments of interests, by new and augmented taxes. As ever the farmer is regarded by the State as the milch cow. His Wine, Brandy, Wool, and other products will be struck with an additional tariff on being imported, and with this new charge must compete with other producers who are not subjected to such imposts. All raw materials that treaties will allow of, are to be taxed on entering the country. In fact the plan for raising money is in defiance of every sound principle of finance, and calculated on the return of French national prosperity, and here France was not dismembered. Salt is the only article that has not been touched—to trammel its consumption would be more than unpopular. The nation has never had an income tax; it was attempted in 1848, and the rural population revolted against the measure. But to this source of taxation the government must arrive; the farmer cannot be saddled into the great portion of the burden. The natural resources of the country are great, but limited, and without background—the produce cannot be disposed of in home-markets, and to be exported it must be untaxed to be remunerative.

OPPRESSIVE SYSTEMS.

It is necessary to understand fully the painful position of French Agriculturists, that they are the objects of a crusade on the part of what is called the "International Society," a body to which Paris is indebted for its commerce and its terrible disasters. This society seems to have all the trades of all countries banded together, locally and generally. One of the ideas of this body, which has been largely circulated among the rural classes is, that individual landed property is the source of all misery and social inequality—that it ought to be organized and worked by and for the local population federated to this end.

[*Concluded in our next.*]

The north Carolina peach crop is estimated at 4,000,000 baskets.

INCREASE OF THE VEGETABLE AND FRUIT TRADE WITH THE SOUTH.

Very few realize the extent of the vegetable and fruit trade bring developed between the South and our Northern markets, or the immense value to which it may be made to attain. The South possesses the early Springs and prolific lands needed to produce early fruits and vegetables, and the North offers a market for all she can produce. For early vegetables we are now largely dependent upon our neighbors of the Bermudas, this is wrong, we should and would buy them of the South if they were raised. Let us have less cotton to be sold at twelve cents a pound, and more vegetables and fruits. The following from the *Health and Home* should be read and considered by every planter in the South

The South has lands for its capital, and in this land, and the earlier and warmer sunshine that gives it a peculiar fertility and special productivity, lie the comfort and prosperity of the South. Negro labor, skilled to the utmost, in this special industry, aided by machine power, is the mighty lever of the Southern society. Negroes now earn on an average, counting by what the planters realize from their product, a thousand dollars per family, and of this the negro gets but about $260 per annum, and from it he leads a poor life. So that we may say, that under the present distribution of wealth, the planter takes $750,000,000 and the negroes $150,000,000. The $750,000,000 determine the price of land, the $250,000,000 determine wages. Now, suppose Agricultural and Horticultural science and mechanics could be so brought in aid of negro labor, as to make it produce $5,000,000,000, of this $5,000,000,000 the negro would get $2,000 and the planter $3,000—would not both be benefited? The land would be worth four times as much as now, which alone is equal to a greater wealth than the North ever had; and the negro would be better housed, clothed, fed; in short he would be a far more profitable customer to business men. Then certain manufactures would develop—that is to say, those in which high atmospheric heat is not too objectionable."

THE EGYPTIAN BEET.

I have usually found that "novelties" in farming and gardening are by no means likely to prove real improvements, and it was with but little confidence that I bought an experimental package of the seed of the new Egyptian beet, and planted it in a row through a patch of the old-fashioned turnip blood-beet. In its growth it was unpromising, making less show than the adjoining rows, and for a month or six weeks it made no especially remarkable appearance below ground. When the formation of the root once began, however, it gained rapidly on the old beet, and now it is far ahead of it, and comes the first into use. The verdict, is that it is not quite so highly colored as the blood beet, but is not at all objectionable; that in flavor it is neither better nor worse than the other; that it has so little leaf as to be much more easily prepared for market, and that it is fully a week, probably ten days, ahead of all dark-colored competitors, and even a little earlier than the objectionable Bassano beet. It is unquestionably the market beet of the future (until we get something better), whether for commercial or private gardens, it must supersede all of the older sorts. From its small foliage it can be left thicker in the row than any other kind, and will, perhaps be more productive as a late crop, whether for market or as winter feed for butter cows. Any of the blood beets are as good as carrots, or as a source of color for winter butter.—*By George E. Waring Jr.*

SUCKERS ABOUT FRUIT TREES.

Every orchard not carfully watched, is liable to become infested with suckers growing about the foot of the trees, and nothing gives a more untidy appearance. Young orchards must be examined at least once a year, and have all the suckers carfully removed. For quite young trees this work should be done early in spring, as cutting away any considerable portion of growing wood and leaves has a tendency to retard growth; but unless the mass of suckers is very large, it should be done now, if omitted before. From larger trees, it is always better to take off the suckers at the present time, or while the trees are growing freely, as the work may be more effectually performed, and they will be less liable to start again. The worst thing that can be done is cutting the suckers off with a knife in such a way that stubs are left to sprout a second time. If the sprouts are small or only one season's growth, they may be well and easily removed by grasping them one at a time with both hands, and then with a stiff cow-hide boot, place the foot next the tree and on the sucker, and one or two quick jerks will separate it at the base. If this is impracticable, take a small gouge and mallet and cut them off closely. When it is thoroughly done, they will not be liable to reappear, and the few that appear subsequently are easily got rid of. A neatly kept, clean orchard, is better and more profitable in every way, than one infested with suckers, weeds grass, and bushes.—*Country Gentleman.*

AGR. DEPARTMENT, WASHINGTON.

The last Special Report of Hon. Horace Capron are the following Important Specials:

STEAM PLOWING

The inventive mind of the country is strongly stimulated with the hope of educing a distinctively American machine, better adapted to the peculiar necessities of our agriculture than the most successful foreign apparatus. The annual for 1866 contains descriptions and illustrations of several patents of that year, and the volume for 1870 will show that these efforts have been continued during the present year. It is to be regretted that so many still adhere to the impracticable idea of locomotive traction. The reports of the actual work of the five steam plows now in operation in this country, are extremely favorable to the idea of ultimate success in the solution of the problem of steam plowing as an adjunct of our agriculture.

SILK CULTURE.

Silk culture in California has been attended with great success up to the present time, producers claiming that the climate of that State is peculiarly adopted to the rearing of silk-worms, on account of the dryness and equality of the temperature, and the rare occurrence of severe thunder storms. In Utah experiments have been made, with success, in feeding the worms upon the leaves of the osage orange instead of the mulberry. The Japanese silk-worm, *Samia cynthia*, on the ailanthus, is now perfectly acclimated, and breeds in the open air in Brooklyn, Philadelphia, and other, places, but as yet I have heard nothing of the use of its cocoons in manufacture. Two other silk-producing worms, *Attacus yama mai* and *pernyi*, have been bred this season in Brooklyn, but are yet too scarce for a proper test of their value.

DISTRIBUTION OF SEEDS.

The number of packages issued during eleven months of the year number 358,391, of which 133,033 were sent to members of Congress, 17,864 to agricultural societies, 71,400 to the corps of statistical correspondents, 7,960 to meteorological observers. The distribution includes seeds of cereals, grasses, hemp, jute, ramie, opium poppy, sugar beet, tobacco, sorghum, forest and shade trees, and many of the rarer species of plants oleaginous, edible, medicinal, and fibrous. The most abundant and convincing evidence of the great economic value of this distribution can be obtained from the archives of the Department, or gained from the sub-reports in recent annual volumes.

FINANCIAL.

The total amount expended by this Department since November 30, 1866, the date of my last report, is $169,175 24, under the following appropriations, to wit:

Compensation of Commissioner, clerks, and employés	$68,712 03
Collecting statistics and material for annual and monthly reports	14,206 51
Purchase and distribution of new and valuable seeds	30,739 31
Experimental garden, for labor, repairs, purchase of plants, &c.	10,195 58
Contingencies—Stationery, freight, fuel, lights for laboratory, museum, library, herbarium, keep of horses, &c.	15,108 26
Improvement of grounds, (reservation No. 2)	16,017 79
Erection of glass structures for the cultivation of medicinal, textile and economic plants	22,468 37
Miscellaneous	7,727 39
Total	169,175 24

CORN NOT AN EXHAUSTIVE CROP.

It is in accordance with the experience of our best farmers that corn is the least exhaustive to the soil of all cereal crops. Why is this? Is it not largely owing to the fact that the soil is kept loose during a large period of the growth of the crop, and being thus kept loose does it not absorb a large amount of fertilizing matter from the atmosphere? Does it not take in a great amount of ammonia and carbonic acid gas, substance which are necessary ingredients in the growth of vegetation? If this is so, does not furnish us a hint in regard to growing small grains in rows, eight, twelve or sixteen inches apart, thus enabling the farmer, by means of horse-hoes, to keep the soil stirred during the growth of the crop? We understand that in England the wheat crop is horse-hoed to a large extent, and we know that in that country the average yield of wheat per acre is annually on the increase.—*Gin. Gazette*

SPECIAL, TO ADVERTISERS ABROAD.

Advertisers of other States who wish their Advertisements to *appear promptly* must bear in mind that the Money must come with the advertisement to insure its insertion.

The cash, or its equivalent, a satisfactory reference must *come* with the advertisement.

Agriculture.

BINDING WHEAT.

BY GEO. KLINGLE.

Binding wheat and singing low;
Watching where the reapers go;
Watching where amidst the rest—
Strong arms folded on his breast—
Stands the noblest of them all,
Stands the stalwart youth and tall,
Stands the hamlet's greatest pride—
Stands the reaper eagle-eyed.

Watching, singing soft and low,
Binding sheaves with cheeks aglow,
Where in all the country old,
Are locks that burn in deeper gold,
Brown locks that gather sun and shade
Beneath the pointed mat of braid;
And where in all the country side,
Could reaper find a sun-browned bride,
With daintier curve of lip and chin,
Or purer heart to give to him?

If kneeling by the sheaf she bound
With tardy hand, her eye hath found
Some hazy hill-top distant far,
Or glimmer of the first, dim star;
If, drifting on the tide of thought,
She dreams and hath forget
All else, who wonders that across the grain
A figure toiling, halts again—
A stalwart figure broad and tall,
With manly bearing over all—
What wonder that his kindling eye
Sees not the brown thrush loitering by,
Sees not the thousand forms of grace;
Sees nothing but the sun-browned face.

WATER THE STOCK.

We need scarcely remind our readers of the imperative necessity of providing stock with abundance of water at this season of the year, to which animals can have access at frequent intervals, if not all the time. And yet we know that there is scarcely any necessary duty of farm life which is neglected with more frequency than this. Stock of no description can thrive without ample supplies of water; and in the restlessness and suffering occasioned by a neglect to make suitable provision in this respect, the results of the most careful feeding and the benefits of the richest pasturage are oftentimes entirely dissipated. Pastures should be located where they can have the benefits of running water or suitable lakes, for the quality of water at this season of the year is a matter of prime importance. Between a stagnant pool and no water at all, the former would be gladly accepted by either man or beast. But as between stagnant water and pure, there is little question but the health and vigor of both man and beast will be better subserved by the latter. Persons who think that the contents of any swamp hole are good enough for their stock, commit a grave mistake. The stock may drink it and live, and so may a man, but it tells to a certain degree upon the physical condition of both. And during the hot months, when vegetable decomposition is more rapid, and when stagnant water is undergoing active chemical change, no effort should be spared to provide stock with water which is reasonably pure. We know it would involve considerable labor to draw water in the ordinary manner, from a well where a large number of animals are confined in a single enclosure, or to bring the necessary water from adjacent streams. But where the matter does not admit of compromise by driving the stock to pure water two or three times daily, we believe it better economy to draw by hand what water they require, or to rig a wind-mill for the purpose, than to force them to drink from stagnant and fermenting pools.—*National Live Stock Journal.*

SPECIFIC GRAVITY OF MILK.

The *Milk Journal*, recently commenting on the quality of milk, states that its density or specific gravity is not, as is generally understood, a safe criterion of the goodness of milk. According to the *Journal*—

Milk, when kept two or three days, often becomes actually lighter than water. The curious fact is somewhat difficult of credence, since milk contains about ten per cent. of solid matter. If, correct, the great diminution in specific gravity can only be accounted for by some molecular changes in the milk, and perhaps by the evolution of gases. Some similar change in density also occurs when milk is shaken by transport. It is an important sanitary question, whether milk which has undergone such changes is safe food for man or animal. For young or delicate animals, as for babies, or for young calves, stale milk, or even milk which has been transported a distance of several miles, is often found to be injurious, producing readily, acidity, and proving otherwise difficult of digestion. The shaking of any considerable journey appears so to change the relation of the constituents of the milk to each other, that the curd does not afterwards properly separate from the whey, nor does the cream rise, in fresh milk, to the surface. These changes are delayed when the milk, as is common in America, is rapidly cooled down as soon as it is drawn from the cow.

It is the opinion of a Western editor that wood goes further when left out of doors than when well housed. He says some of his went half a mile.

INTERNATIONAL CONGRESS FOR SERICULTURE IN ITALY.

The International Congress respecting the rearing of silkworms, held in the month of November last, at the celebrated Gorizia, Institute, resolved, before breaking up, to reassemble in 1871, in the City of Udine, and commissioned Professor Haberlandt and Count Freschi to draw up the programme of proceedings. Those two distinguished rearers of silkworms have honorable fulfilled the task assigned them, and in a programme, of which I have the honor to send you a copy, have set forth such questions as bear most intimately on the subject, but which are still unsolved, or concerning which there is as yet a certain degree of doubt. It would be, perhaps, superfluous for me to dilate on the importance of such a Congress, for no one is ignorant of the extent to which our agricultural and commercial interests are concerned in the rearing of the worms in question. It may be merely observed, however, that the interchange of observations and the intercommunication of experiments, on the part of the respective rearers, as well as the explanations of the modes adopted with reference to such experiments, and the subsequent discussions on the entire subject, cannot fail to exercise a beneficial influence, on the above-named branch of industry. The Minister of Agriculture, Industry and Commerce will be represented in the Congress by some official delegates; but, at the same time, it would afford him much pleasure were the agricultural committees and other similar associations in the kingdom to whose care the interests of our rural economy are chiefly confided—to take an active part in the labors of the Congress, either by deputing to it specially competent persons, or by duly transmitting to Count Freschi, in Udine, the results of any local experiments or observations, in regard to the questions announced in the afore-mentioned programme of proceedings.

The zeal and patriotism of those honorable Associations are sufficient guarantees that this appeal will not be made in vain.

For the Minister,
LUZZATTI

PROGRAMME FOR THE SECOND SESSION OF THE INTERNATIONAL CONGRESS OF REARERS OF SILKWORMS.

The above-named International Congress, which, under the auspices of the Imperial and Royal Agricultural Society of Gorizia, assembled in that city in November, 1870, entrusted to the undersigned the duty of drawing up a Programme of Proceedings for the next session of the Congress, in the autumn of 1871, in the City of Udine.

Before proceeding, however, to fix definitely the subjects of discussion for that session, we have deemed it both proper and useful to submit the following Draft of a Programme to the examination and judgment of the learned writers on the subject, and of the careful breeders of silkworms.

The real amelioration of the present deplorable state of cultivation will depend on the solution of two cardinal questions—one referring to the most efficacious preventatives of *Torpidity*, *Lethargy*, or the disease of withered substances; the other relating to the mode of combating *Pebrina*, *Atrophy*, or the disease of corpuscles. It appears to us that the Congress will do well to devote its special attention to the discussion of those two questions, which may be subdivided as follows:

First.—Experiments made during the last few years as to the mode in which torpidity originates—to what causes is that disease to be attributed (a disease at present more fatal than any other), and what measures should be taken to prevent it?

Special interest would be attached to comparative experiments.

1st. On torpidity occasioned by congenital disposition.

2d. On torpidity consequent on a defective preservation of the seed.

3d. On torpidity, as influenced by the time of rearing.

4th. On torpidity, as originating from defective management of the silkworms (for example, in respect of ventilation, temperature, quality of the leaves, insufficient space, etc.)

5th. On the efficacy of continuous fumigations with chlorine gas.

It is scarcely necessary to add that those experiments cannot lead to any positive results as to the conditions of rearing the worms, if the experiments of which the influence is tested to be identical.

It would also be interesting to have a critical compilation in respect to all the experiments made up to the present time, both with regard to the disease itself, and the characteristics which are of a nature to develop a predisposition thereto.

With regard to *grains*, it would be more particularly desirable to test the relationship which may possibly exist between the torpidity in question and the weight, color and mode of depositing the seed, as well as the microscopic characteristics which may tend to develop such a disposition of the egg.

With reference to the worms themselves, it would be desirable—in addition to the ideas already entertained on the subject—to determine, in a more precise manner, the time at which there is an increase of the depositing of the crystals in the renal vessels; and also whether there are any vibrations and fermentations in the contents of the intestines, blood or internal organs. It would be necessary to make precise mention of any internal circumstances, and more especially of any atmospheric influence likely to conduce to such a morbid state; and, finally, it would be advisable to make new experiments for the purpose of ascertaining definitively whether there is any connection between *blackness of color* and *torpidity*.

With respect to the chrysalis, it would be of utility to ascertain the relative importance of the black spots, and the nature of their relationship to the leaden-grey color of the butterfly, and also, with reference to the butterfly form, to make observations on the gray spots, the vesicles on the wings, etc., as well as on the duration of existence, the development of vibrations after death, the quantity and quality of eggs deposited, etc., etc.

The more closely those characteristics are defined, and the more exactly their relation to torpidity is studied, the easier will it be to make the best selections for re-production, and to prevent the hereditary transmission of the diseases to a future generation.

Secondly.—Not less important than the question of *torpidity*—in respect of which we look forward to the next Congress for considerable information—is the one relating to the disease of corpuscles. We have placed this as the second question, because it may be said to be one that is already partly solved.

In order to supplement our existing knowledge on that point, we may propose the following for consideration:—

1st. The result of the process of breeding, by means of seed procured by the cellular system.

2d. The methods hitherto employed to insolate the copulations of butterflies.

3d. Natural indeterminate copulation, or systematic separation thereof.

4th. Methods of effecting, on a large scale, the microscopic examinations of the butterflies. With what degree of exactness are those examinations to be made—that is to say, how many fields are there of observation in each preparation? What are the preservatives against a confusion of the healthy deposits with the corpuscular, etc., etc.? As we cannot expect that, in the course of a few years, the requisite quantity of seed can be produced by the cellular system, it will be necessary to devote great attention to the microscopic examination of the seeds introduced into commerce; and, to that effect, it would appear opportune to propound these two other questions for a definitive solution.

5th. What method of microscopic examination should be generally adopted in respect of the seeds?

6th. Is the cultivation of corpuscular seeds admissible? If so, up to what degree of per centage and intensity?

It will be, therefore, seen that each of the two cardinal questions submitted to the discussion of the next Congress, for the cultivation of silkworms, is subdivided into a series of special ones, and for that reason it appears to us that it would be advisable to commence with each of the isolated observations, and then to proceed to such as, based on one's own experience and on the facts communicated to the Congress, might lead to a general point of view, in order to arrive at practical conclusions in accordance with experience and science.

Such educators of silkworms as proposed to address the next Congress, either with reference to the two principal questions or to the accessory arguments, will please notify their intention to the Committee not later than the 1st of September, addressing their communications to either of the undersigned commissioners, and in the event of such breeders being desirous of proposing to the Congress any other questions relating to silkworms, it would be advisable that public notice thereof should be given, and that they should be previously discussed. The Committee will deem it their chief duty to insert, in the definitive Programme of proceedings, all such questions as are demanded by the general wish of the breeders of silkworms, and the parties sending in those questions are invited to undertake the duty of reporting thereon.

Professor FERDINAND HABERLANDT,
GIROLAMO FRESCHI di Udine.

Gorizia, April 9, 1871.

PREMIUM COW OF THE STATE.

Mrs. John Scholl, of this city, is the owner of a cow, five years old last January, that we do not believe can be beaten in this or any other State for the quantity or quality of her milk. She is now fresh with her fourth calf, and the following is a summary of the milk and butter she has produced in fourteen consecutive days by actual measurement and weight, which can be proven by more than one witness, if doubted.

Days.	*Dates.*	*Gal's.*	*Pints.*
Monday,	May 8th	6	3
Tuesday,	9th	6	6
Wednesday,	10th	6	5
Thursday,	11th	6	6
Friday,	12th	6	7
Saturday,	13th	7	1
Sunday,	14th	7	0
Monday,	15th	7	4
Tuesday,	16th	6	4
Wednesday,	17th	6	5
Thursday,	18th	6	7
Friday,	19th	7	1
Saturday,	20th	7	1
Sunday,	21st	7	0
Total of milk		96 gals.	1 pt.

From which was made *thirty-two and three-quarters* pounds of excellent butter.

The cow is one-fourth Durham and three-fourths scrub stock. She is fed equal parts of starch feed, brewer's grains, bran and corn-meal, about one and a half pecks twice a day. At night she is put on pasture, and in the day-time allowed to run through the streets. Mrs. Scholl has frequently refused $100 for this cow. She has now three of her calves all heifers, that promise to make cows equally as good, which she would not sell for $100 apiece. If any person doubts the quantity of milk this cow is reported above as giving, we are authorized by the owner to say that she can be seen milked any morning or evening, by calling at her residence at the north end of Walnut street.—*Madison* (Ind.) *Courier.*

[With such facts as these a cow of this producing habit would bring *several hundred dollars* here in California.—ED. F.]

Hiland Samson of Waltham, Vt., has a cow which he has to milk three times a day. The first week after her calf was taken off she gave 345 quarts of milk. She now gives 30 quarts per day.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other foods as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 22 100 per cent. For life-sustaining properties to all stock against cold or sudden changes of weather or over-driving has no equal.

For MILCH COWS it is particularly valuable, increasing the quantity of milk and improving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($40 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold; at $50 per ton in England, where it has been proven for a long time to be for every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

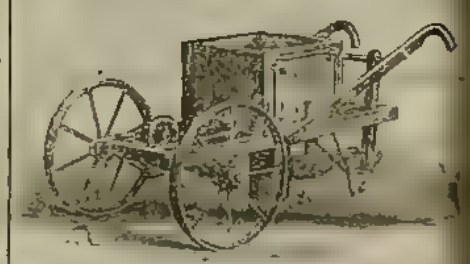
The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

PACIFIC OIL & LEAD WORKS,
NOS 3 AND 5 FRONT STREET,
San Francisco.

TRUE'S

IMPROVED

POTATO PLANTER.



This is, undoubtedly, one of the most valuable Machines adopted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed.

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse, plant six acres of potatoes in a day, is of inestimable value because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor-Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

RAISINS.

There is no article, that has made part of the country grocers stock longer or more uniformly than the raisin. Raisins have been exchanged for the child's pennies from time beyond which living memories extend. When mince pies and fruit cakes, with the delicious raisins, were not, no one can remember. They have long formed an important article of commerce, and were never more in demand than at present, and their importance will be greatly increased when the vast productions of California shall be made available. The raisin, as all know, is a dried grape. All are equally well acquainted with the fact that there are different kinds of raisins, known by different names, by which they are known are from the places where the grapes are raised, or from the names of the vines which bore them. We have the Muscatel raisins from Malaga, the kind of grape of associated with the place of growth. The mode of preparation gives different qualities to the raisin. The Muscatel is the most highly esteemed, and they are prepared by cutting the stalk that bears the bunch half off, when the grapes are fully ripe, and removing all leave that can shade them, and allowing them thus to dry in the sun. These are called "raisins of the sun." The bunches are carefully removed and packed in boxes in layers, with a paper seperating each layer. A more common kind, called Lexias, are prepared by collecting the grapes when ripe, and dipping them into a lye made from the ashes produced by burning the branches of the vine. These are mostly from Valencia, as the preceding kind are from Malaga—both from Southern Spain. A small black raisin comes from Smyrna, in Asia Minor. It is dry, and mostly used for culinary purposes. Another variety comes from Turkey in Asia, called Sultanas. They are put up in drums, and although small are delicious. What we call currants, that come from the Grecian Islands are really raisins, and should be so designated. They are a seedless grape, growing on the Islands of Zante, Corfu and Cephalonia, on the western coast of Greece. Wine is often made from the raisin, and is the finest quality when carefully manufactured. The famous Tokay wine of Hungary is made from raisins.

During the year 1870 there were imported into the United States 856,193 packages of raisins, of which 752,603 packages came from Spain, and 37,023 from Southern France, Cette and Marseilles 31,854 from England, 3,153 from Scotland, 1,620 from Germany, 358 from Sicily, and from all other ports 29,671.

THE DECLINE IN THE PRICE OF RAISINS.

Fifteen months ago layer raisins sold at four dollars forty-one cents per box in this market. In September following they were selling at three dollars seventy-five cents, and for a long time were held above three dollars. These high prices induced heavy shipments, and consequently the receipts during the winter and spring months were larger than were known before, and far in excess of the consumption. The crop was estimated at one-and-a-half millions of boxes, of which nearly one million were shipped to this port. England imports only the finest qualities, known as 'London layers.' France and Germany took scarcely any, on account of the war, hence the only markets then open for layers was this country, to which market they were rushed in overwhelming quantities. Prices have declined, until now they are selling at two dollars thirty-five cents to two dollars forty cents a box—at least fifty cents (gold) less per box than they can be bought for in Malaga and laid down here. The low prices prevailing since January last have greatly increased the consumption, but, still large stocks are held by the importers. It is not probable that any more will be imported until the new crop is ready in October. A great deal of money has been lost by holders during the past season, who hereafter will be more careful. After the present stocks are reduced within manageable limits, it is probable that prices will advance to a paying figure, or about three dollars per box.—*American Grocer.*

COCOONS OF THE WORLD.

The *British Trade Journal* furnishes the annexed statement of the cocoon interest:—

The value of the cocoons grown in the whole world in 1870 was composed as follows:—France, £4,334,000; Italy, £11,260,000; Spain, and other European countries, £984,000, giving a total for Europe of £16,588,000; China, £17,000,000; India, £4,800,000; Japan, £3,200,000; Persia, £920,000; other Asiatic States, £2,192,000, giving a total for Asia of £28,112,000; Africa, £44,000; the Pacific Islands, £24,000; America, £20,000, making a general total of £44,788,000. It is thus seen that France produces about a-tenth of all the silk of the world, and it is certain that the production would have increased but for the effect of the disease. It can only be hoped that the disease may yet be conquered, and the eminently national industry of silk growing, which the late war has but partially interfered with, will resume its former importance.

Industry will make a purse, and frugality will give strings to it. This purse will cost you nothing. Draw the strings as frugality directs, and you will always find a useful penny at the bottom.

CHOICE

AUSTRALIAN SEEDS.

We have just received from Australia a very choice collection of Australian Seeds, particularly of the

AUSTRALIA GUM TREE.

Of these we have SIX KINDS, and some never yet had here of new and choice varieties,

AUSTRALIAN WATER PLANT.

In this collection we also have the WATER PLANT, a rare flower known as *Villarsia Cathlifolia*, which we shall introduce into our Lakes and Ponds.

JAPAN SEEDS.

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American Authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to "possess an excellent library at a reasonable rate.

DEALER IN

NATIVE CALIFORNIA

Red and White Wines,

Brandies, Port, Sherry, Angelica, Etc.

Northwest corner of Battery and Pine Streets,

SAN FRANCISCO

Gypsum! Gypsum!

GROUND GYPSUM.

The great Fertilizer, and one of the best and most valuable Restorers of wasted lands, can now be had at less cost than Guano or any other manure.

FOR SALE AT

THE FARMER OFFICE,

SEED OF THE BIG TREES.

Those who desire to procure fresh seed of the BIG TREE of Calaveras or Mariposa for planting, or for sending to friends at the East, can have this seed in neat packages of $1 each.

Apply at FARMER OFFICE.

COMMISSION SALES-ROOM

AND

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience to purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship them same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders shou be as explicit as possible as to the wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should include satisfactory references or the Cash; articles could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

We particularly call attention to the

New Agricultural Implements

which we announce in our columns several of which we have the exclusive sale on this Coast.

THE POTATOE PLANTER,
JEBB'S PATENT CHURN,
CHEESE CURD CUTTER
PATENT WEEDING HOE,
LIFTING HAY FORK,
WITH OTHER VALUABLE IMPLEMENTS.

Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

TREE SEEDS

OF ALL THE VALUABLE KINDS.

Also,

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

Silk Culture.

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER, Fruit and Ornamental Seeds.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

FLOWERING BULBS.

RARE AND CHOICE KINDS

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

Please remember that Lawns can be made so as to be perfect at any season of the year.

FINEST MIXED LAWN GRASSES,
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS,
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

EVERGREEN AND DECIDUOUS SHRUBS, ORNAMENTAL TREES.

FRUIT TREES,

The newest and most approved sorts:

ORANGES, LEMONS, FIGS,
Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kind

GREENHOUSE AND BEDDING PLANTS.

These are grown at our residence under our own eye where they always can be selected.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference

WARREN & CO.

Farmers' Headquarters 320 Clay Street, up-stairs

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING, AUGUST 10, 1871.

THE CALIFORNIA FARMER READING ROOM AND MUSEUM OF NATURAL HISTORY.

No Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil types for one insertion, twenty cents a line for any larger space. Each subsequent insertion half those rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue of our Journal*, to which we would direct their special attention.]

Our New York correspondent, M. A. Shirley, Esq., whose happy, spicy and interesting Letters have graced our columns for many years, speaks to our readers upon New York Rioters and the Communists spirit of Paris, as one and the same; his views and pictures are true. The many friends of our esteemed friend are earnestly desirous of welcoming him back again to our Golden Land.

ART AND THE ARTISTS.

A Sketch of our own Artists and what they do for California, in our next.

COMPLIMENTARY

We have received the Premium List of the *Old Bourbon County Agricultural Society* for their 34th Annual Fair, to be held on the Fair Grounds near Paris, Kentucky, on the 5th to 9th September inclusive.

The Lists of Premiums are most liberal, the Rules and Regulations excellent; "Old Bourbon County" will have a grand Fair.

We return thanks for a Complimentary Card to their Fair, and if we could "Balloon" it, would surely be there.

NEW MUSIC.

Among the great variety of new and choice pieces of Music and new Songs, issued from GRAY'S Musical Emporium, we name the following as very choice:

Home Sweet Home, with variations; a new composition and really beautiful; by H. J. Bennett.

Flowers, Fresh Flowers—a brilliant song; words by Pascal Loomis; music by C. T. Evans.

Sweet Emeline—A Ballad, sung by "Louis Brahm;" the musical arrangement by G. T. Evans.

Vivian's Songs and Sketches—"Earths in the Air;" "Ten Thousand Miles way," "Wait for the turn of the Tide," "The Lion of the Season."

Speak to Me—A new Song by H. B. Farrie; music by F. Campana.

Oh How Delightful—A waltz song, sung by Alice Dunning.

These are all published by M. Gray, and are now among the popular songs of the day.

THE AGRICULTURISTS OF FRANCE.

By the renewal of our Paris correspondence our readers will find very interesting reports of the condition of Agricultural matters in that War region; we hope, however, now to have these interesting Letters from our "Special" regularly as in times past. We are glad to know that the "fate of war" has not carried off our excellent correspondent; we welcome his coming again.

THE GREAT SILK INTEREST OF ITALY.

Those who are interested in Silk Culture in our State should carefully read the doings of the Sericulturists of Italy. Their proposed Congress will grapple with important questions, and these should interest all Sericulturists here also, for they are questions of moment. Our information is derived from the publications of the "Silk Supply Association" of London.

WHO MAKES SCRAP BOOKS

'Tis said "In the making of Books there is no End," and we know there are many persons who are always interested in making SCRAP BOOKS, now to all such persons, we have some very important information which will benefit them.

It will be seen by our advertisement of OLD NEWSPAPERS FOR SALE that we can furnish just the *right material for Scrap Books*, for we have in this collection of Old Newspapers, a series of papers of 10 to 16 years and *from* every State in the Union, and also European papers; also select scientific and literary papers, Journals of all kinds In these papers will be found much of the best Poetry of the age, also Stories, Anecdotes, Receipts &c., all very valuable, and these we shall offer at the low rate of $2.50 to $3, per hundred Many of these are 12, 16 and 20 page pamphlets and magazines and other periodicals those who want these collections will address

EDITOR CAL. FARMER.

CROPS, SEASONS, PROSPECTS, &C.

The Crops of the year 1871 will tell in a goodly sum in Gold value, despite all the croaking and complaining that has been uttered, printed, and heralded far and wide.

Were our Grain crops *Short*, the facts would appear in an advance in the price, as there is plenty of money to speculate with, but there is no tendency to do so, either here or in any of the Eastern marts, or in Europe.

Abroad as well as at home the Grain and Flour markets are dull, quiet, very quiet. Some would argue that because so little wheat comes to our market, that our crops are short, more so than has been said. *We* do not argue thus, for there are large quantities in the storehouses in the country where money can be had, as cheap or cheaper than in any city, and our farmers are richer in *Gold* and richer in wisdom than in former years, and they do not all come down to San Francisco to get their *loans on Grain*, the Banks in the interior (Savings Banks) and the capitalists have plenty of money and they want it used, and Grain is good security, and therefore grain is held back now, hoping better rates.

There are several reasons also that tend to make smaller shipments here. Farmers will plant Banian and plant more *extensively* this year; they know grain pays; they have "Summer Fallowed" largely, and a very large area will be planted and planted early, too. In addition to this our grain growers are more carefully watching the markets at home as well as abroad, and they stand ready to send their grain to any other point than San Francisco, if a better market opens, and this does occur by reason now of great and grand Railroad Facilities.

Farmers will be *Speculators* in their own products; they want the highest rate they can get for labor, and this is right; and we are truly glad they are now waking up to a careful observation of all the markets at home and abroad, and availing themselves of all reasonable chances.

From our Interior Exchanges we can see that many places send large amounts of wheat to market from whence early reports gave none; this is as we expected and stated, early in the season.

The late cool and cloudy weather indicates early rains, and if our grain growers but feel sure of this, the acreage planted will be *immense*, for the *biggest kind of a price* will be had in 1872 for every *bushel* of wheat stored in the earth in 1871.

The Flour market is not very active, although the China trade is taking flour (superfine) in considerable quantities, at rates under, however, former prices, and while we supposed all that trade in shipping abroad will be supplied by California, our Sister State, Oregon, is sending cargoes of flour direct to Europe, and will probably largely enter into that trade. Even should first efforts not be very successful, as has proved, experience and perseverance will win. If Oregon ship their grain and flour directly abroad, our market will be relieved of a large amount heretofore coming here.

Oregon has a large and prosperous harvest this year, and her products will tell well. Oregon is rapidly increasing her population, her cultivation, her stock-raising, and her crops—of this we shall soon see, and feel, as railroad communication opens up her resources to us.

Our Barley crop and our Oat crop will prove large and profitable. Barley is advancing, and receipts are less than the demand; this we account for by the interior demand for *feed* for the horses along our Railroad lines; these consume large amounts, beside there are interior demands of other kinds.

Oats have been raised largely. Several large crops of the Norway oats; these have done well, very much so in some places; yet in some the seed was very much mixed.

Our other products are coming in very freely. Potatoes, Onions and Beans are plenty, the former excessively so.

If our Farmers over the State would keep themselves well advised as to the markets, the demand and supply, and only send as the demand calls, they would rarely see a glut of any produce, and reap a better harvest for their labors.

STATE AND COUNTY FAIRS.

The time is very near at hand when our STATE FAIR and several of our County, and our District Fairs are announced to hold their Exhibitions.

We look in vain, however, among our Exchanges from the country for the Premium Lists, and their plans and their progress. The county papers say little or nothing about them, and the *Secretaries* give no information, which is a grave error.

The County and District Fairs should be fully set forth in the leading County Journals in order to arouse the people to action, and induce them to active work in early season, otherwise the time will come and but few will be ready, and these fairs will be very slim; rather than, such should be the case, they had better be *omitted this year*, and the counties give all their products and time to making the STATE FAIR an successful that strangers from abroad, who will be here in great numbers, will see by the products and manufactures that are exhibited, that CALIFORNIA is indeed a GREAT AND PROSPEROUS STATE.

WINE STATISICS OF SONOMA.

An error in the sum total of the Wine crop of Sonoma occurred in our last week's report by reason of haste in omitting to correct a proof; the figures will plainly show the error.

The sum total of *Sonoma* was put down at 743—200 Gallons; it should be 860,200 Gallons, and the total for the three counties at 1,218,200 gallons by figures received since, of small lots scattered over Sonoma and Napa, we feel sure that these two counties when closely examined will show a product of One and a half Million Gallons of Wine for the year 1871.

MECHANICS' FAIR.

EIGHTH EXHIBITION OF THE MECHANICS' INSTITUTE.

Agreeable to the announcement the doors of the Pavilion were opened for this most interesting Exhibition on Tuesday last, when a large and crowded audience were in attendance to enjoy the anticipated pleasure of the Introductory Exercises of the coming season of Fairs.

The Pavilion was very fully and beautifully decorated with Flags of all nations, and among them the Stars and Stripes rose triumphant, as the herald of Freedom and Liberty.

The Pavilion this year covers an area of 100,000 feet, and extends over the entire Square, and is admirably fitted up to meet the wants of all Exhibitors. The addition of the Floral Department adds greatly to the perfecting the whole.

At the appointed hour of 11 A. M., President Hallidie ascended the platform, accompanied by the Orator, Clergy, the Japanese Commissioners and others, and there delivered his opening address, which was attentively listened to by a very large audience. The address was an excellent one, giving a sketch of the rise and progress of the Institute, and its present condition and hopes for the future, an address of practical value.

Presiden Hallidie then introduced Hon. Milton S. Latham, who delivered the Oration, which was listened to and received with great interest. No oration has been delivered before the Institute or in our State of greater value and excellence, containing important and valuable historical and practical truth, classically and admirably arranged and most gracefully and eloquently delivered. It was an oration that will accomplish great good and redound to the honor of the Orator, who breaking away from the coils of a busy Banker's life, found time to step aside and refresh himself and others at the 'Fountain of Knowledge, where all who go, drink and are refreshed, but thirst again.

The Exercises were happily interspersed with Music by the Band and Songs from the School Children. The exercises were appropriately opened with Prayer, by Rev. Mr. Hemphill, and closed with a Benediction.

The tardiness of Exhibitors will delay the good appearance of the Pavillion for nearly a week; it is much to be regretted, for such delays might easily be avoided. It is too early to speak of the entire Exhibition, as a great amount of articles from abroad, as well as at home, are not opened or ready, and are now crowding into the Pavillion.

The present Exhibition of the Mechanics' Institute will undoubtedly show more of the capacity and Resources of California than any that has preceded it, and will make a more enduring impression upon the Public mind, and place California well and truly before the world, for it will be a Revealment of the Working Power of our true Industrials, and although there may be much of fancy display amid the numerous amount in that vast Emporium, still there can be seen the solid and sure evidences of the most wonderful progressive power of California.

In the powerful "Steam Engine" and other grand Inventions of our mechanics, with the splendid machinery for bringing out the "Gold of our Mountains," and with the Agricultural Machinery that brings out the *Riches* treasures of the Earth, we see the Sinews of our State that are to support and build it up for its future greatness, and prepare it for a bright career among the Nations of the Earth.

The Manufactured Goods that will be shown will compare favorable with any portion of our country, we are fully confident, and show well before the thousands and tens of thousands that will congregate at the Pavillion day after day and night after night for the month that this Grand Exhibition will be before the People.

"Floral Hall" will prove a most attractive scene to all; it will be a refreshing "Picture," the "Beauty Spot" of the Pavillion, not only *beautiful*, but pleasantly refreshing to pass from the hum of the thundering machinery and a heated crowd to a Garden of Beautiful Flowers and their refreshing fragrance, and amid the Fruits and other happy surrounding of Fountains and Trees, with their cooling breath.

The Gallery of Painting and Works of Art are not in the order for notice, but will most undoubtedly be such as to win for all the Exhibitors a due share of praise and commendation. The large space yet to be filled, and what is yet in preparation, gives an assurance of an exhibit most interesting and valuable, and highly creditable to our State.

The length of the Address of the President and the Oration of Mr. Latham precluded their publication in this number; we hope to publish them both in full soon.

We esteem the present Exhibition one that will reflect great credit upon the earnest and hard working managers of the Institute, and one that will redound with honor to our State.

Our Report of the Exhibition will commence in our next number and continue till all shall be reported, especially our Home Industry.

REAL ESTATE SALES.

We call attention to the several Farms now offered for sale in our columns, which are each and all Excellent Farms, and will be offered at really advantageous terms; as to Price, and PAYMENTS easy.

VALUABLE PUBLICATIONS.

We have received from Prof. Ferdinand Von Mueller, of the Botanical Gardens, Melbourne, editions of his very valuable scientific publications, being "The Principal Timber Trees, readily eligible for Victorian Industrial culture, with indications of their native countries and some of their technological uses."

We return thanks to the Directors of the Bay District Agricultural Society for a Complimentary Card to their Fair at "Bay View Park."

OUR WOOL INTEREST.

A visit to the Wool Exchange of Messrs. McLennan, Whelan & Grizer, will soon convince any one of the value of the Wool of California, which now assumes a magnitude that counts us many millions of dollars in value every year and is steadily increasing.

We were much interested by our visit last week to the Wool Exchange, and the examination of the large establishment of this firm where wool is received, sorted and made ready for shipment, to a very large amount, this being the largest and most complete wool sorting house on this Coast, in fact the principal place.

The warehouse covers a fifty Vara Lot, 275x225; the capacity for sorting and packing is 225 bales per day in the season; there are six large Wool Presses and numberless tables for the sorting; the number of men employed is 53, while the capacity for storage is 12,000 bales wool.

Wool is sorted and baled here at the lowest rates; no charge for storage to customers while receiving and sorting their wools, or until it is moved away. Every facility is given to advance the wool growers' interest.

One of the finest inventions in the country for hoisting and moving bales of wool is here seen—a hoisting apparatus that works by water power, doing the work of *twelve men*, two hands only required.

Wool growers who have never visited the Wool Exchange should by all means do so when they visit this city; they will find their advantage in it.

By the courtesy of the firm and by their Circular received, we can give the following RELIABLE Statistics of

THE WOOL CLIP OF 1871.

Total receiv'd for 1871, Bales, 41697—	lbs	12,694,510
" Ship'd from Country," 527—		336,880
" Bought by Country Factories,		300,000
	lbs.	13,331,390

This it should be remembered is only the *Spring Clip*, which is about one million pounds over the clip of 1870.

EXPORTS FOR 1871.

Exported the present year, Bales, 23,762—	lbs	12,575,922
Bought by Factory here		1,500,000
" " " in County	lbs	300,000

Oregon wools have been received here to a large amount, and Australia wools are being imported, as there is a profit in the transaction.

The price of wool ruling very high this year; our wool growers have done nobly. The value of wool exports in 1871 will approximate to the handsome sum of ($5,000,000) *Five Millions of Dollars*.

THE MILLS SEMINARY, BROOKLYN.

This is one of the Corner Stones of our State, and an Institution that is destined to accomplish a vast amount of Good for the "DAUGHTERS OF OUR GOLDEN LAND."

The Mills Seminary has one of the finest and most beautiful locations in our State, and one of the stateliest and most finished structures, extensive, and highly finished in all its Departments for study, and with Halls, Suits of Rooms and rooms for Pupils, newly and elegantly furnished.

Rev. C. T Mills and Lady, the Principals, are highly qualified for their high responsibility and sacred trust, and they feel it and will be true to it. No Seminary of Learning in our land has a finer or fairer opportunity to accomplish Great work. The opening day was indeed a Fairy Scene of Beauty, Intelligence and worth.

The opening of the College on the 2d inst. was attended by a throng of the Parents of the Pupils, that on the *day of opening* numbered ONE HUNDRED AND EIGHTY-FIVE. This is a success rarely attained, and we rejoice to make such a goodly record. We have some statistical record to make of this Noble Institution at an early day,

THE INDUSTRIAL FAIR GAZETTE.

This spirited and excellent Annual Fair Gazette is this year published by Messrs. Francis, Valentine & Co., of the Commercial Press Rooms, the largest Printing Establishment of the kind on our Coast, having the best facilities for Printing and Press work in California.

A new Press and all the needed materials, and with good active aid, they have now their third number of the Gazette, which reflects upon them the highest credit. One thing is certain, all contributors will have a fair opportunity for their advertising this season on a liberal and impartial scale.

The grasshoppers of the great Western deserts have taken wing, and are blasting vegetation from the Minnesota River to the British possessions. The farmers have already suffered severely from the effects of the terrific winds that have recently swept over the greater portion of Minnesota, but this last misfortune has discouraged them so thoroughly that some of those who have lost most, are said to be seriously contemplating a removal to other States.

The New York Cotton Exchange proposes to concentrate the cotton trade of New York by having all cotton stored in one capacious warehouse. That city has received this year 1,038,000 bales of cotton, and the stock various 50,000 to 200,000 bales. It is said that this concentration would facilitate the trade.

THE COSMOPOLITAN HOTEL.

A. H. Pearson, Esq., now the Proprietor of the Cosmopolitan Hotel, offers to strangers and visitors to our city extraordinary and luxurious comforts at his Hotel. Strangers should be sure and visit him and see what they can enjoy.

GRAIN SHIPMENT.

The Gilroy *Advocate*, says that thirty tons of wheat were shipped from the depot in that city, to San Francisco by the freight train of last Monday of last week.

HISTORY OF A BALE OF COTTON.

A sample of the best bale of cotton ever produced was exhibited at the New York Cotton Exchange lately. The weight of the bale was 4[illegible] pounds, which, in the aggregate, realized the respectable sum of $3,312.20—an average of $[illegible]-48 per pound. The cotton was raised by W. [illegible] McShaw, Lee county, Miss.; was picked by himself, wife and daughter in their parlor, and took the first premium of $500 for the best bale of short staple cotton offered at the St. Louis fair last October. Again, it took the Sweepstakes prize of $1,000 offered for the best bale of either long or short staple. After this Mr. McShaw donated the cotton to the Southern Educational Society, which offered it on the St. Louis Merchants' Exchange and sold it to Mr. D. G. Tutt at thirty cents per pound. Mr. Tutt in turn presented it to the same society, when it was again sold at twenty-[illegible] cents per pound. Again it was presented to the society, when it realized thirty-eight cents per pound, the buyer in this case presenting it as formerly. After this it was not offered for sale by the society, but was raffled for $1,000 and afterwards sold and resold, to be finally purchased by Messrs. Shryock & Rowland, St Louis, who shipped it to Messrs. Norton, Slaughter & Co., of this city, for the purpose of getting it so far away as to prevent it being entered for the $1,000 premium to be offered at the fair in October next, as well as to test the appreciation of Northern factors and manufacturers of the Industry of Mr. McShaw and daughter, whose fair hands have prepared for exhibition, beyond doubt, the finest bale of cotton ever grown in any country. Messrs. Norton, Slaughter & Co., report the sale of the cotton at fifty cents per pound through Messrs. [illegible] Mann, Son & Co., cotton brokers to Mr. Jonathan Earl, Treasurer of Norfolk and New Brunswick Hosiery Co., of New Brunswick, N. J.

At the request of Mr. Earl Mr. T. J. Slaughter will write Mrs. McShaw for measurement of herself and daughter, who will be presented with fine underunits manufactured from this remarkable cotton.—*N. Y. Herald.*

FURNITURE MANUFACTORIES.

MESSRS. N. P. COLE & CO.

Much has been written and said about the kind of laborers employed. Objections have been made against the employment of Chinese labor and State Prison labor; but if either of these classes can be made useful in developing our resources, and making the State richer, then it is the duty of all thus to have our interests advanced and our resources turned to good account.

The Furniture Firm of N. P. Cole & Co. are now manufacturing, on a large scale, the Furniture they formerly *Imported*, and by this means labor is stimulated here, and the money that would go abroad for labor, for freight, insurance, interest, &c., is used here. This we esteem true economy.

Messrs. Cole & Co. now employ over 300 convicts, and with overseers and other directors some 250 are employed.

The force here in the city, with clerks, salesmen, &c., make all in employ some three hundred men. This we call building up our "Home Interests."

The result of this is, that at the manufactory at San Quentin over $20,000 worth of Furniture is made monthly, and finished work too; in proof of this any one can see as fine Parlor and Chamber Sets, Chairs, Extension Tables, and other furniture as can be imported; among those lately made are many of entirely new designs.

All who take an interest in the development of our State in its Industrial wealth, let them call at the Furniture Warehouse of Messrs. N. P. Cole & Co., on Bush Street, and they will find much to interest them, for here is one of the means that develops the wealth of our State.

We are glad our heavy Importers, like this firm, are repenting of their former sins in sending away money for Goods which should be made here. We will forgive them if they will never do so any more.

THE WILD BEAST TRADE.

An English magazine says, "The trade in wild beasts is a system as regular as the trade in tea, coffee, or cotton, or any other merchandise. Some creatures, of which parrots are the most common, are brought over by sailors, who intend them, perhaps, as presents for their sweet-hearts, or they sell them for grog or tobacco as soon as they land. A dealer has agents in every country; and these agents communicate with the natives of the various countries. The system is now carried to such perfection, that if any gentleman or lady would like an elephant for private riding, a tiger as an ornament to the garden, a crocodile or hippopotamus for the lake or an ostrich or emeu for the lawn, the wish can be gratified by merely addressing a letter to the London dealer. He will calculate distance, the time occupied in catching and transporting the desired animal, give a close estimate of the cost, and deliver it at the door on the appointed day."

WATER.

The proprietors of the water ditch for the introducers of water into Ukiah, are well satisfied with their prospects. The work has been delayed for a few days, on account of the non-arrival of material from below. Next week the work will be resumed, and in a very short time the water will be flowing through town. It has already been brought a distance of three quarters of a mile, and rises to a hight of from fifteen to twenty feet above the point of exit. By the time it reaches the town, which is somewhat lower, it can be carried into the upper stories of the highest houses. As this is a work of great public benefit we hope to see it a success.

A Potato Bug was found the other day on the spex of a church spire in Woodstock. He used it as an observatory.

NATIONAL FAIR.

THE AMERICAN POMOLOGICAL SOCIETY will hold their Fair this year at Richmond, Virginia, commencing September, 7th, and continuing three days. Exhibition open to the Nation. (See Circular in our columns.

Hon. M P. Wilder, President, P. Barry, Esq., Chairman Fruit Committee.

STATE FAIRS.

THE STATE AGRICULTURAL SOCIETY FAIR AT SACRAMENTO,

Commencing Sept. 18th, and continue six days

O. F. Reed, President, Maj. Beck, Secretary, T. N. Hosg. Assistant Sec'y.

Cosmopolitan Hotel,

SAN FRANCISCO,

CHANGE OF PROPRIETORSHIP.

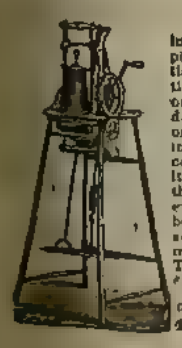
H. H. PEARSON,

LATE OF THE RUSS HOUSE,

Having bought the interest of Messrs. Tubbs & Patten, of the Cosmopolitan Hotel, has secured a lease for a term of years of this well known and elegantly furnished Hotel. His previous reputation ensures it being kept in first class style, while in order to keep pace with the times he intends to make important reductions in the scale of charges. His intention is to make it a family and business house, while his large connection with the traveling public warrants him in expecting a large amount of country, Pacific coast and Eastern patronage.

The prices will range from two to three dollars a day for ordinary accommodation Board by the week or month as per contract. The table will be kept on the most liberal scale and many improvements introduced. The spacious reading room is the finest of its kind in the city, while the furniture and fittings generally are superior to those of any hotel in San Francisco. The house will be thoroughly overhauled

Mr. PEARSON assumes proprietorship this day, August 1st. 36.6



Best machine ever offered for paring, coring, quartering or slicing apples Does the entire work expeditiously, promptly and well—separating core and parings from fruit at once. Will prepare more fruit for drying, pies, or family use than six ordinary parers. For farmers it is indispensable Fruit can be taken care of in season, instead of allowing it to rot in the orchard Three times the price of the parer can be saved on every crop. A barrel of apples can be got ready for pies in one hour, saving in labor alone, in a single year, many times the cost of the parer. Territory for sale. Agents wanted. Send for circular.

WORK.

BY ALICE CARY.

Down and up, up and down,
Over and over and over;
Turn in the little seed, dry and brown;
Turn out the bright red clover.
Work, and the sun your work will share,
And the rain in its time will fall;
For Nature, she worketh everywhere,
And the grace of God through all.

With hand on the spade and heart in the sky,
Dress the ground and till it;
Turn in the little seed, brown and dry;
Turn out the golden millet.
Work, and your home shall be duly fed;
Work, and rest shall be won;
I hold that a man had better be dead
Than alive, when his work is done!

Down and up, and up and down,
On the hill-top, low in the valley;
Turn in the little seed, dry and brown,
Turn out the rose and lily.
Work with a plan, or without a plan,
And your ends shall all be shaped true;
Work, and learn at first hand, like a man—
The best way to know is to *do!*

Down and up, till life shall close,
Ceasing not your praises;
Turn in the wild white winter snows,
Turn out the sweet, wild daisies.
Work, and the sun your work will share,
And the rain in its time will fall;
For Nature, she worketh everywhere,
And the grace of God through all.

GIVE ME THE HAND.

Give me the hand that is kind, warm, and ready;
Give me the clasp that is calm, true and steady;
Give me the hand that will never deceive me;
Give me the grasp that I aye may believe thee.
Soft is the palm of the delicate woman;
Hard is the hand of the rough, sturdy yeoman;
Soft palm or hand, it matters not—never;
Give me the grasp that is friendly forever.

Give me the hand that is true as a brother;
Give me the hand that has harmed not another;
Give me the hand that has never forsworn it;
Give me the grasp that I may adore it.
Lovely the palm of the fair blue-veined maiden;
Horny the hand of the workman o'erladen;
Lovely or ugly, it matters not—never!
Give me the grasp that is friendly forever.

Give me the grasp that is honest and hearty,
Free as the breezes and unshackled by party;
Let friendship give me the grasp that become her,
Close as the twins of the vines of the summer,
Give me the hand that is true as a brother;
Give me the hand that has wronged not another;
Soft palm or hard hand, it matters not—never!
Give me the grasp that is friendly forever.

—*Goodman Barnaby.*

THE BEAUTIFUL.

I would
Make me within the universal chain
A link, whereby
There shall have been accomplished some slight gain
For men and women, when I come to die.

—*Alice Cary.*

USEFUL RECIPES.

Snow Ball Pudding.—One-fourth of a box of gelatine dissolved in half pint of boiling water, juice of two lemons, one pound of sugar, whites of two eggs; put the sugar in a dish, strain on the gelatine and lemons; when cool, add the whites of the eggs well beaten; then beat gelatine, lemons, your eight eggs all together, three-fourths of an hour. Serve with boiled custard.

Jelly for Meats.—Put to boil four calves feet, two onions, one dozen clove pepper corns, a tablespoonful of salt, two nice carrots, and a head of celery in six quarts of water; boil six hours. Strain this into an earthen pot to cool. When wanted, take off all the fat, put the rest into a preserve kettle, with two lemons cut up; the whites and shells of six eggs, let it boil fifteen or twenty minutes. Take it from the fire, set it where it will keep hot, turn it in a cup of cold water, let it stand fifteen minutes, then strain it through the jelly bag, when all is run through clear, put what you require in the mould; let the rest cool in a dish to cut small for garnishing the meat. If the jelly is not of a good bright color, add a tablespoonful of indigo.

For the Bite of a Rattle Snake.—Onions, tobacco, and salt, equal proportions made into a poultice.

DRESS AND HEALTH.

The tight waists, the low necks to dresses, and the high-heeled shoes are most flagrant abuses, and ought not to be tolerated. We shall not quarrel with the little jaunty hats of the ladies, for they are indeed pretty, and no harm results from them, as of all parts of the body the head needs the least clothing.

I have often fancied that the main scheme of the world is to create tenderness in man; and I have a notion that the world would change if man were to acquire more of this tenderness.—"*Friend in Council.*"

MORE ABOUT EDUCATION.

BY ELEANOR KIRK.

My daughter graduates next month, and thank Heaven will then have finished her education, remarked a fond mother a few days ago, as her darling came in from school, laden with books, and to all appearance tired out with the short walk from the Institute.

"Finished her education?" I repeated, "How old is the child?"

"Don't let her hear you call her a child;" laughed her mother. Why Flory is a full fledged woman, seventeen years and three months old. Oh! the way that girl has studied, night and day to keep at the head of her class is something incredible. You see the fact is, she never cared for Latin, or Mathematics, and at first was rather dull; but when she found that her education would not be complete without them, she went to work in earnest, and of course she conquered.

What's the matter, Flory, don't you feel well?" continued the mother, noticing for the first time her daughter's lassitude.

I am worried, mother, that's all, replied Miss Flory. I know I shan't enjoy Nilsson at all tonight, on account of these dreadful lessons. These problems will take me an hour each besides this long translation. Perhaps if I study until it is time to go, I may be able to get some of them off my mind."

"How many lessons have you?" I asked, curious as usual to ascertain what kind of treatment this young mind and delicate body were receiving.

"Oh, I don't know," she replied wearily. Sometimes I fear more than I have got brains for, I shall be very glad, indeed I shall, when I have finished my education," and the first thing I knew the tired child was sobbing.

"Why Flory dear, how nervous you are!" said her mother. "Now go right down stairs like a good girl, and ask Ann to make you a nice cup of tea,, you'll find some cake and chocolate drops in the basket. That will brace you up a little."

"Cake, and chocolate drops! Cup of tea! Brace her up a little! I regarded that woman with the most undisguised astonishment, and wasn't at all surprised when she asked me what in the world I was thinking about. The desire to reply by asking her why she did not order a dish of rattlsnake and a tumbler of lemonade with a slight sprinkling of strichnine in it, was almost uncontrollable; but fearing that might not be considered exactly polite, I said instead:

"Excuse me, but I do not think Flory's nerves need any more bracing up just at present. She is overworked, and should have immediate, and utter relaxation.

Give her a nice piece of broiled steak, Mrs. Hammond, and let her lie on the sofa and rest until it is time to go to the concert. The music will then do her good, and how in the world can she enjoy any thing while in this exhausted state?"

"Oh, if I only *could* shut up my eyes, and rest but I must learn my lessons, indeed I must. So far I have never failed once; sobbed the young lady."

Your studies are of more consequence than the concert, Flory, hadn't you better remain at home this evening, and then you will have plenty of time to rest, and learn your lessons too," suggested the mother.

To my mind this was adding insult to injury, and I could not understand how a woman of ordinary intelligence, could be so blind to the physical needs of her own daughter. I found after a little that Flory never could be prevailed upon to eat any breakfast, a cup of strong coffee being the only "nutriment," partaken of until lunch time, which on account of the distance was always eaten in the library of the Institute. This luncheon was usually composed of *cake and pickles*, a trifle less indigestible to be sure than corks and vitriol, not only a trifle. Sometimes this was varied with biscuit and cheese." She usually got home from school at four, sometimes, though, not often allowed herself time for a promenade, then resumed her studying, and kept at it often until long after the family had retired. This was finishing her education with a vengeance! and as I looked at the delicate form, already crooked with poring over volumes which she should never have been allowed to look into, I wondered if she wouldn't finish up in the grave before the time arrived for her graduation at the Institute.

"Do you study Physiology, Flory?" I next asked.

"No!" interrupted Mrs. Hammond. "Her teacher told me the other day that it would be time enough for Flory to read up in Physiology, when she left school, and that one reason why the scholars were not allowed to study it at the Institute was because there were so many immodest and disgusting details connected with the lectures and explanations, and that these someway seemed to compromise the teachers engaged in it, weakening their influence over their pupils. It will be quite time for Flory to study Physiology when she is married."

"If when she has finished her education, as you term it, there is enough vitality left to exist with, to say nothing of marrying, I shall be very happily disappointed!" I could not help saying, although fully aware that it would have no effect so far as the mother of that child was concerned.

Just think of an Institute for young ladies where Physiology cannot be taught on account of its immodest and disgusting details. Just think of a young, sensitive, and growing brain crammed with dead languages, mathematics, chemistry, and logic, to the utter disregard of the taste of its owner, or the ability to digest such heavy intellectual pabulum. Just think of a mother in this enlightened nineteenth century allowing her daughter to study night and day, subsisting in the mean time on cake and pickles! To me it was like hitching a pony to a baggage wagon, and then whipping the tender beast up hill. What kind of an animal will this be if it survives the climbing? Either spavined, balky, or hopelessly demoralized. A man with such an animal to sell, cannot excuse his pranks to the merchant who wants a good horse, by representing him as "nervous," and "so sensitive." But mothers angle for rich and respectable husbands for their crooked-backed, unmarried, and highly educated and "graduated" girls, and sometimes succeed in palming them off on men intelligent enough, one would suppose to know better. Sensitive, and nervous, they understand to mean, susceptible, imaginative, keenly alive to the beautiful in nature and art: marriage is a wonderful eye opener. Nervous in translating, nervous after a few months' trial, and not unfrequently "*fidgety*," when in reality it is nothing more nor less than disease. Under the most favorable circumstances, as to health, ability, etc., the education of a young girl is a very ticklish piece of business. In the first place, no child should be sent to school until she is at least eight years old, and then to none but the Kindergarten. Here, exercise, amusement and study so blended as to be productive of the most beneficial results. I know of girls fifteen years of age, who have never seen the inside of any institution save these Kindergartens, and have really laid more solid and enduring foundations for future education, than any of those who attend the highest priced and most fashionable seminaries in the land. Now I don't believe in girls being compelled to write compositions if they don't want to, or rather if the effort to obey rules makes them nervous and irritable. I have known young ladies to pass sleepless nights in consequence of not being able to produce a creditable essay, and then lie at the end, by getting some one else to compose it—there being nothing to chose in the premises save disgrace or falsehood. Young ladies are often put through peculiar course of study, because they are expected to be fitted for teachers. Teachers are born, not made! and the faculty for imparting, if it comes at all, comes as naturally as the breath we draw. One-half the teachers in our public schools have no business there. They are badly born, badly reared, forced into blossoming by a hot house developement, which is of no service when they come to be transplanted into the hardier soil of the school-room. They are irritable, tired, sick, and their pupils hate them. What wonder? Show me a teacher that the boys have found a nickname for, and the story is told, at least as much of it, as I need to know. She may make them obey by sharp tones, imperative gestures, and a frequent use of the rod, but obedience when it is the result of fear, although to be preferred to open revolt, is nevertheless of small value.

There is a great reform needed in the matter of education. Parents should look carefully after the health of their daughters, and never allow them to be crowded with intellectual labor. They should be exceedingly watchful, too, of their tastes and inclinations, not only consulting their own conscience and good sense, as to what is best fitted for them, but allowing the girls their principal voice in the matter. A girl of twelve years, if properly trained, will be able to tell which agrees with her stomach,—meat, vegetables or farinaceous articles of diet! and will most certainly know if able to stand a little of all sorts. This is precisely the case with mental food, and the majority of our young ladies would not as now be found finding fault with different sciences were they properly presented and explained, and if too much, in the way of recitation and analysis, were not expected of them.

Mothers look out that your daughters develop harmoniously, and if you find that the exacting duties of a public school or seminary are interfering with this harmony, don't stop to talk about it, but remove them immediately; and do see to it that they are physiologically posted, before they are driven into the perils and cares of Maternity.

HOW TO DO IT.

Clergymen and schoolmasters are particularly well qualified to instil into the minds of the young principles of kindness to animals, which they might do through timely exhortation, diffusion of pictures of animals, and by the prevention of robbing nests, keeping birds in cages, transfixing beetles and butterflies, killing toads, drowning puppies and kittens and the witnessing the dying agonies of slaughtered animals by children. It is equally possible to implant in the minds of adults ideas favorable to the kind treatment of animals by the founding of societies for their protection, by popular lectures on the injuries sustained from insects, and on the benefits derived from birds, and by encouraging the placing of artificial nests in old trees, on branches, &c., and the establishment of colonies of birds on woody precipices and other suitable places. Advantage has also to be taken of the press, such as the daily papers, the agricultural periodical, and, above all, the almanacs. Where education, instruction and example are in vain, recourse must be had to the law. Moses was the first to make a law for the protection of animals (Deut. xxii. 6). Mahomet followed this example. All governments ought to make laws for the protection of animals from cruelty, and to prevent the wanton destruction of such as are useful to man.—*Herr Meitr, Animal World.*

WORTH REMEMBERING.

The story of the dandy who showed how much art succeeded force, by separating two fighting dogs by clapping his snuff-box to their noses, is capped by the landlord of the inn at Dalnacardoch, Scotland, quite an original in his way. In winter a number of the neighboring shepherds assemble at his house to drink, crack jokes, and while away the long nights. Sometimes they got quarrelsome. When a fray is brewing, our hero puts a bit of Cayenne pepper in a bit of brown paper, makes the tongs red hot, lifts the packet with them, and holds it at the bottom of the door. The result is magical. An invaterate sneezing and coughing commences, which is instantly succeeded by a rush to the door and a break up of the company.

BENEFITS OF SUNSHINE.

Seclusion from sunshine is one of the misfortunes of our civilized life. The same cause which makes the potato vines white and sickly, when grown in the dark cellars, operates to produce the pale sickly girls that are reared in our parlors. Expose either to the rays of the sun, and they begin to show colors, health and strength.

One of the ablest lawyers in our country, a victim of long and hard brain labor, came to me a year ago suffering from partial paralysis. The right leg and hip were reduced in size, with constant pain in the loins. He was obliged in coming up stairs to lift up the left foot first, dragging the right foot after it. Pale, feeble, miserable, he told me he had been failing for several years, and closed with "My work is done. At sixty I find myself worn out."

I directed him to lie down under a large window and allow the sun to shine on every part of his body; at first ten minutes a day, increasing the time until he could expose himself to the direct rays of the sun for a full hour. His habits were not essentially altered in any other particular. In six months he came running up stairs like a vigorous man of forty, and declared, with sparkling eyes "I have twenty years more of work in me."

I have assisted many dyspeptic, neuralgic, rheumatic, and hypochondrical people into health by the sun cure. I have so many facts illustrating the wonderful power of the sun's direct rays in curing certain classes of invalids, that I have seriously thought of publishing a work to be denominated the "Sun Cure."—*Home and Health.*

BENEFITS OF LAUGHTER.

Probably there is not the remotest corner or little inlet of the minute blood vessels of the body that does not feel some wavelet from the great convulsion produced by hearty laughter shaking the central man. The blood moves more lively—probably its chemical, electric or vital condition is distinctly modified—it conveys a different impression to all the organs of the body, as it visits them on that particular mystic journey, when the man is laughing, from what it does at other times. And thus it is that a good laugh lengthens a man's life by conveying a distinct and additional stimulus to the vital forces. The time may come when physicians, attending more closely than they do now to the innumerable subtle influences which the soul exerts upon its tenement of clay, shall prescribe to a torpid patient, so many peals of laughter, to be undergone at such and such a time," just as they do that far more objectionable prescription—a pill or an electric or galvanic shock.

BIRD-LOVE LESSONS.

Birds manifest a feeling, sentiment, and poetry in their language during the spring-time of life.

Is it not the power of love—that sublime exaltation of the heart, that strong impulse of our being—which renders the most feeble strong, the most simple intelligent, and carries the sacred fire into the imagination of the dullest mind? Love is winged. The bird is all wing and all tenderness. With the joyousness of his songs, his sweet warblings and the tremblings of his wings, he comes to reproach us with our falsehood, our coldness, our mean selfishness, or miserable calculations, and our broken faith. He enters our dwellings, establishes himself in our gardens, installs himself under our roofs, to repeat to us, from morning till evening, "Love, love, love, you must love each other; you must always love each other."—*Intelligence of Animals.*

THE INFLUENCE OF ONE ACT.

One pound of gold may be made into a wire that would extend around the globe. So one good deed may be felt through all time, and cast its influence into eternity. Though done in the first flush of youth, it may gild the last of a long life, and form the brightest and most glorious spot in it.

GRAY'S MUSIC STORE,

Musical Merchandise of every Description.

THE RECENTLY INTRODUCED

BURDETT ORGAN.

The manufacturers of the BURDETT ORGAN have succeeded in producing an instrument which may in a manner be compared to an orchestra, containing a variety of tones richly voiced. The stops in this make not only add to the power of a perfect imitation of the organ, but give BURDETT of different instruments, so that a simple melody may be repeated a number of times and the interest of the listener will be increased. It is with pleasure we acknowledge the flattering testimonials we have received from leading organists in California among whom may be named

MR. GEO. T. EVANS Organist of the Church of the Advent, Howard Street, S. F.
MR. SAM'L D. MAYER, Organist of St. John's Church, Oakland.
MR. H. M. BOSWORTH, Organist of Calvary Church, S. F.
MR. J. W. C. RHIND, Organist of Howard St. M. E. Church, S. F.
MR. R. J. McQUADE, Organist of St. Francis Church, S. F.
MR. J. H. DOHRMANN, Organist of St. Patrick's Church, S. F.
MR. CHAS. H. HOFFMAN, Organist of the Mason Street Synagogue.
MR. J. MULLER, Organist of St. Ignatius' Church, S. F.
MR. GEO. SCHUCKE, Organist of the Methodist Church, San Jose.
MR. EVERETT POMEROY, Organist of the Presbyterian Church, San Jose.
MR. F. WM. GABRIEL, Organist of Trinity Church, San Jose.
MR. J. W. YARNDLEY, Professor of Music, St. Augustine's College, Benicia.
MR. LOUIS HECKMANN, Organist at the Unitarian Church, Geary Street, S. F.
MR. JAS. R. LAWRIE, Professor of Music, Santa Clara.
MR. DAVID H. BERLIN, Teacher of Music, Stockton.
MR. WM. CARMICHAEL, Organist St. Mary's Church, Stockton.

Our prices range from $125.00 to $600.00 in U. S. Currency, our arrangements being such that we supply our wholesale and retail customers in San Francisco without advance for freight from the factory at Chicago. The makers ORGAN are convinced that they will be better paid in the end by selling a first class organ at a fair price, than an uncertain one at an astonishingly low price. We will sell organs, melodeons and pianos on time payments to responsible buyers.

MILLS' SEMINARY.

REV. C. T. MILLS AND WIFE, FOR THE PAST six years Principles of the Young Ladies' Seminary at BENICIA, are happy to announce to their patrons and friends that the next term of their well-known Institution will open

Wednesday, Aug. 2d,

In their NEW, COMMODIOUS AND BEAUTIFUL BUILDING just completed at

SEMINARY PARK, BROOKLYN.

As most of the able and experienced corps of teachers, with valuable accessions, as well as the fine classes of pupils now pursuing their studies, remove with them, the school remains essentially unchanged.

With greatly increased facilities for physical comfort and intellectual culture, and without additional expense, Mr. and Mrs. Mills believe they can accomplish much more for their pupils in the future, than they have been able to do in the past, and that their Institution offers unrivalled advantages for a thorough and finished education.

All communications relating to admission, and all letters of inquiry, should be addressed to

REV. C. T. MILLS, D. D.,
35.23 Brooklyn, Alameda county, California.

anta Clara College, S. J.

SANTA CLARA, CAL.

Conducted by the fathers of the Society of Jesus

THE TWENTY-FIRST ANNUAL SESSION OF THIS Institution will commence on MONDAY, August 7th 1871

TERMS—Tuition in the Classical and Scientific Departments; Boarding and Lodging; Washing and Mending of articles; School Stationery; Medical Attendance and Medicines; Fuel, Light, Baths, etc., per session of Ten Months, ... $350

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Maraschi, S. J., St. Ignatius Church, Market street, between Fourth and Fifth, San Francisco.

Purchasers of Bees can have all information on this subject by applying at the FARMER OFFICE. Terms liberal.

Miscellany.

PREVENTION VERSUS CURE.

Sir Astley Cooper, Magendie, Dr. O W. Holmes and Dr. A. L. Carroll, of the *Medical Gazette*, are among those physicians who have testified that after thousands of years effort almost nothing has been settled as to means of curing disease. Yet the labors of the medical profession have been in the highest degree useful. In seeking to cure they have learned very much of the causes and conditions of illness, and have gathered a vast mass of knowledge of Divine laws, the spread of which has worked wonders in removing the roots of misery, and enabling mankind to lead happy, because healthy lives. The Almighty's penality for violating His laws seems unavoidable, despite human skill. All that can commonly be done is to ward off the worst results by a hardy conformity to those laws. Thus again appears the truth of the homely saying, that "An ounce of prevention is worth a pound of cure.

But is there not in these facts a grander significance? Do they not teach a deeper lesson? All through the recorded past, society has been blessed with self-styled doctors, who have in every age sought and offered to cure its various evils by aid of their vaunted skill—almost always in consideration of fees of some kind, proportioned to their talent, more frequently in proportion to the ability of the patient to pay. Their nostrums, always consisting of sundry efforts to force nature from her course, have uniformly failed, and have reacted to harm the patient and destroy the physician's reputation. It seems as true of all communities as of persons, that disease once incurred can rarely be cured, but can only be alleviated and outgrown by returning to the observance of those natural (that is, Divine) laws, disobeying which has made the trouble.

But in the effort to cure, a mass of knowledge has been gathered. These natural laws, as far as yet learned, and just as fast as they shall become known and obeyed, will advance social prosperity.

Yet in medicine there have always been a few who, seeing the futility of most efforts at cure, have given the greater part of this time to compeling the experience of thousands, and from such compilation discovering such laws, and making them known. These are the men who have helped mankind most. A thousand times more helpful have they been who have shown how to keep health, than they who have toiled to restore it. The same is true of society. While sentimental charities and violent reformers have sought to cure society, economists have sought to learn and point out the cause of all our ills. One class has thoughtlessly taken its own wisdom for granted, and labored to compel society to follow its views; the other has modestly tried to find out what the world is, and to live accordingly. The few who have operated by this latter method have done more for humanity than all who have followed the more common mode.—*New York Mercantile Jour.*

SUPERINTENDENCE.

Hon. Horace Greeley, in his address before the Labor Reform Convention in this city last Spring stated that he had worked harder as an employer than as an employee. The proprietor of a large estate on the Hudson River lately told one of his workmen, "I work as hard, as early, and as late as any of you; you get paid for it; I do not!" The head of a considerable establishment in this city, when he hears "wages-slavery" talked of, says, "I am the sole slave here!" The President of a large company remarks, "To discharge my duties fully and properly, I ought to have nothing to do but to answer questions." More than one business head of a newspaper office testifies that he gets more advertising than his canvassers.

Self-styled "working men" often talk as if superintendence was a mere excuse for drawing a good salary; a mere idling and pretence; To such we would commend the story of the deacon, whose pastor requested him to conduct the service, and who, after entering the pulpit and making the effort exclaimed, "Brethren, if you think this is easy, *just come up here and try it!*" Also that of the colored barber who, being rebuked for charging fifty cents for shaving, said, "I don't! I charge twenty-five cents for the shave, *and twenty five for de knowledge how!*" Knowledge goes for something in business; and when a superintendent, be he owner or employee, draws a large salary, he receives in it wages for the extra time and work given to gaining the knowledge and skill needed to oversee and direct numbers of workers.

COMPOSITION FOR LEATHER.

It is said that a patent has been issued in France for a composition to be applied to leather of any kind, which claims to be of remarkable excellence. It is said to be completely insoluble in water, and while rendering the leather water-proof, to keep pliable and soft, and when applied to boots and shoes neither to strike through the leather so as to soil the stockings, nor to come off upon the lower edge of the pantaloons, as is the case with so many similar preparations. It also gives a fine polish to the surface, which may at any time be cleaned by means of a damp rag or sponge. This article is made by taking one hundred parts of finely pulverized lamp-black and thirty parts of East India copal, previously dissolved in rectified turpentine, and mixing the two together until the whole forms a homogenous paste. To this is to be added fifteen parts of wax and one part of rubber, which has been first dissolved in some etherial oil. When the whole is properly mixed a current of oxygen is passed for half an hour through the mass, and after cooling the whole is to be thoroughly worked up. It may then be packed in tin boxes and kept ready for use.

The Census returns show that for thirty years there have been in this country eighty neat cattle to each hundred of the population. Of these eight must be working oxen and twenty-eight milch cows.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attach as to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Gomb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H&L

Is on the red cover of the packages

Price of Money in Eastern Cities.

New York—Money very abundant and rates as low as 2@3 per cent. per annum on call, at 4@6 on time paper.

Boston—Money very plenty, 3@5 per cent. on call, 5@6 on time.

Chicago—Money capital employed 6@8, per cent. on call, 6@8 on time.

Money in England.

Bank of England rates 2½@3 per cent, heavy supplies, money very easy in business circles.

Money in France.

Money in the form of Gold is now showing very abundant. ly, the people among the lower classes offering Government all it wants to pay the Prussian Indemnity.

GRAIN AND FLOUR MARKET.

The Grain market and all receiving and sales of Grain are on a much less scale than has been anticipated. A few vessels have been loaded for Europe, and a constant demand for Flour for China keeps our Millers busy, this is all that can be said of the Grain movements of late.

The amount received in our city has been much less than usual, and it is accounted for by the reason that our growers are not willing to sell at present rates.

The rate at Liverpool and at New York remain the same as the past two weeks, and crop reports in Europe good, and good crops in the Eastern States generally, this makes shippers and speculators shy, and there seems no probability of an advance in grain for some time, if at all.

Barley has been in more active demand. Oats less firm. Corn steady. Hay nominal, yet a fair trade in all. *Straw* now pays better than burning.

Potatoes come in freely, demand not very brisk. Beans and Onions are in fair demand, prices the same.

FISH.

Larkins & Catania,

The supply of Fish is very good of the kinds the swim in our own waters. Soon we shall have some Eastern delicacies.

Purchasers of nice Fish should go to the California market and see the arrangement of Larkins & Catania with their fine new Ice House, and newly fitted up stall, they are prepared now to keep all Eastern choice fish cool and fresh, and at all times. Go and see their new Stall.

REDUCTION IN PRICE

AND

Liberal Club List

With a desire to place the CALIFORNIA FARMER in every family on this Coast we have concluded to make a

Liberal Reduction in Price,

and to place it at such a sum as that every Cultivator of the soil could have it.

We have announced the Terms in another column, and here we give additional inducements to our patrons and friends to not only subscribe for the Farmer, but to secure other valuable Publications at a moderate price also.

We make this announcement for the express purpose of meeting the wants of a large increasing Agricultural population, and a large emigration that will soon be coming to our shores, who need the information of our resources, and we feel we can serve our State in no better way than to give to these new comers the

CALIFORNIA FARMER

at a very reasonable sum, so that every family can have a copy.

[Concluded.]

CATTLE PLAGUE.

The Cattle disease has followed in the track of the invasion It is not just to accuse the Germans of deliberately importing black cattle from Russia and Hungary to spread the contagion in France, because the Germans here suffered most themselves; according to the law of 1869, all cattle slaughtered when attacked by the pest, are paid for in full by the German government to their subjects. In Rhenish Germany last autumn this compensation alone amounted to one million francs. A Veterinary surgeon, a butcher, and two experts, seperately appraise the value of the animals to be killed, the lists are added up, divided by four, and the mean and conclusive value thus found. The French have proved quite averse to noticing the authorities when cattle are attacked. The government only allows three fourths of the value of the animal, and the flesh is free to be sold of the cattle thus killed, having been proved to be not unwholesome. But the peasantry will not take to it, and preferred to starve, as was seen in the west of France, rather than eat it. In such case it is salted and sent elsewhere. In a district infested with the plague, boards are conspicuously placed on the highways announcing the pest. Animals which die from the disease must be buried in a trench not less than seven feet deep, the skins cut to be rendered unserviceable for any end should an attempt be made to disinter the remains. Dogs are to be chained up during the plague, they have been found to be the most active agents in propagating it. The remedies applied have proved more interesting than successful. One was causing the animal to drink a mixture composed of five grains of carbolic acid to a quart of water. M. Saud, a distinguished chemist of Neuchatel, asserts, he has saved six beasts in ten by a preparation of beer yeast, beat up in tablespoonfuls of this mixture in another quart of beer, administering the dose every eight hours. After twenty-four hours, he asserts, the most obstinate cases have often been cured. It is curious to find yeast, which for popular explanation is a fungus, a mushroom in fact, proving so efficacious.

THE WEATHER, CROPS, FEED, &C.

The weather has been most unpropitious. To a very severe winter of frosts succeeded a dry spring and at present a wet summer. The winter-wheat was nearly killed, and it was found that fields sown by the sowing machine, and leaving a smoother surface, suffered most. Fields ordinarily sown in small ridges and left in the rough escaped fairly. In France cherries, apples, and walnut trees are largely planted in fields, as a source of profit—in their shade the winter grain was saved. At present the grain is filling badly, is attacked by rust and smut—the yield will not be an average. Root crops, oats, and rye promise well. Hay-making is proceeding under great difficulties. Many farmers place the grass when cut in small ricks permitting fermentation, opening them to avoid "spontaneous combustion" when the rain ceases. This process is favorably spoken off. The secret is never to open the cocks when it rains. In Germany, matters are about the same. The clover crop has altogether failed, and there is a famine as regards fodder. Hay had to be imported from Russia. During the spring horses had to be fed on potatoes, small quantity of chopped straw and bran. The number of black-cattle has diminished by one-half. In several districts of the north of France, the grain and other seeds forwarded from kind hands gratuitously, failed. They were of an excellent quality, but did not suit the climate. France has truly experienced that sorrows do not come in single file but in battalions. Insects—not only old enemies but new ones—have come and gone like an Egyptian plague. Much to their prolific appearance is to be attributed to the remarkable disappearance of the small birds, frightened away by the noise of battle, or killed by the severe winter. Also, the population has been so decreased, dispersed or otherwise occupied that it could not attend as in other times to the destruction of the vermin—wasps, May bugs, and garden lice, were the most terrible in their countless armies of devastation, a solution of tar water, or two parts of carbolic acid to twenty of water finished up with the plant lice.

GOVERNMENT AND AGRICULTURE.

It is not to be wondered that the Government is forced to reduce the usual monetary encouragements to Agriculture. There will be no regional shows this year—if any at all. The schools for the breeding and training of horses are largely reduced in their working staff of inspectors, and only "noble animals" of English and Arab blood will be encouraged. As the farmers have largely suffered in their loss of live stock, attention is more than ever directed to import cattle specially adapted to the climatic differences of this country, for France is an abridgement of the climate of Europe. Sheep will be decidedly selected for their meat producing qualities, as it is found hopeless to compete with Australia and South America in the matter of wool. Indeed the wine-producing capabilities of the United States and Australia are creating uneasiness here. One vine-grower complain that a small work which he published on the culture of the vine, was returned to him translated from Australia with the publisher's compliments, that the matter proved so suitable, or almost to appear specially written for the wants of that great colony. The Agricultural Colleges were not re-opened till the 1st of October—the same with the Veterinary School—but several of the Professors have instituted a series of a professional towns over the country, and several strangers have availed themselves of permission to join the parties.

CATTLE PLAGUE IN BELGIUM

Belgium Agriculture has also suffered by the severity of the season and the cattle plague. Live stock has had to be largely sold off owing to the scarcity of fodder, and the sale of horses is all. Much foreign seed were employed this year, but failed—not being acclimatized, but time has been left to sow flaxe and colza instead. The scarcity of forage has led to the employment of many substitutes—the most curious the mistletoe. This parasite covers the trees in the valley of the Siene in large quantities, and the wood-cutters from time immemorial have fed their cattle on it. It has suddenly become an extensive article for exportation It is eaten directly out of the rack like hay mixed with crushed grain or cut straw is better. Sheep take to it quite naturally, and mixed with bran and meal pigs devour it with avidity. It proves green feeding in that trying period of spring, when "roots" are all but exhausted

Wild mustard, and the leaves of buck-wheat are largely sent to the Paris market, and consumed like spinage. As a succedaneum for diminished supplies of animal food. Rabbit-breeding has assumed enormous proportions.

BAY VIEW AGRICULTURAL FAIR.

This Fair will commence on Monday at the Bay View Agricultural Park, and continue six days

CALIFORNIA COTTON.

We are informed that the Cotton fields of Col. J. M. Strong, at Merced, promise great crops this year, and that the proprietor will have excellent crops, and will have the machinery to Gin his own Cotton.

MECHANICS' INSTITUTE FAIR.

ANNUAL ADDRESS.

BY HON. M. S. LATHAM,

DELIVERED AUG. 5TH, 1871.

Mr. President; Ladies and Gentlemen;—This occasion has brought hither the representatives of the great motive power of national prosperity. Here are the men by whose agency the material comforts of life appear around us, and the elements of civilization are in process of continual development. What is it that has drawn the line between barbarism and civilization and fixed the horizon which separates the world of light from the dominion of darkness? It is the genius and vigor which direct the mechanical forces. The very globe we inhabit was as revelation tells us, "without form and void" till the Almighty moved upon chaos and then order and beauty everywhere appeared.

It is a sublime thought of the English philosopher that the human mind is a spark, an emanation of the Deity a congenial spirit in the domain of poetry, having exclaimed:

"O thou! who first from solid darkness struck
That spark the sun, strike wisdom to my soul."

There is no branch of science taught with more interest, or productive of nobler results than the department which teaches the principles of mechanics by which the material evidence of comfort and luxury have been established at successive periods of the world, and are everywhere rising on this continent. The great American statesman, Mr. Webster, in his epigrammatic and matchless style, referring to the columns of national prosperity, said it was supported by Agriculture, the Mechanic arts and Commerce. These are the elements of strength by whose harmonious corporation the republic has risen to a proud eminence in less than a century, holding its high position as a model form of government in the family of nations, embodying the true representative principal in the local and general government, opening its doors to kindred races capable of assimilating, appreciating and upholding the principles upon which our institutions are founded. Who but the Infinite can set bounds to the achievements of the human mind in its discoveries and assertion of its own wonderful power in rendering subservient to man the silent yet irresistible powers of nature?

"Mr. Speaker," said the eccentric orator and statesman of Roanoke, in the House of Representatives, "society is divided horizontally; those who do the head-work above, and those who do the hand-work below."

Now, gentlemen, if the mechanical association of this the commercial capital of the Pacific slope, "you have done and are doing the "head-work above," in making the mechanical forces you are directing subservient to the mind, by carrying out your behests in doing "hand-work below."

MACHINERY OF EARLY PERIODS.

In the early periods of the world machinery was moved by muscular force, by water, by the air, by weights, and springs, yet mechanical contrivances and combinations were in operation long before the principles upon which they rest had been discussed or developed as science and branch of natural philosophy. The massive structures which stand in the valley of the Nile are enduring evidence of the mechanical powers that existed at a period so early in the world as to be almost prehistoric. From the days of Herodotus, nearly four and a-half centuries before the Christian era, they were regarded with special interest by that Greek historian, on account of their antiquity even in that day, and in view of the wonderful amount of labor required to build them, over one hundred thousand persons having been compelled to labor upon the great Roman pyramid of Cheops. They have defied for forty centuries the destroying hand of time, bearing upon them inscriptions of historic interest in hieroglyphics, a key to which has been discovered by the genius of modern times.

Mechanical skill, centuries subsequent to the founding of the pyramids, developed in forms of unrivalled beauty in the Greek islands. In Athens and elsewhere in the Hellenic islands models of architectural taste existed, the temples of Jupiter, of Neptune, the Parthenon, the temple of Minerva, the Pompeian, in which was kept the sacred vessels used at festivals and which was adorned with the statues of Athenian heroes; the temple of Theseus the place of refuge for the persecuted—were among the proud monuments of Grecian taste.

ANCIENT LITERATURE.

St. Paul; when in Corinth, realized not only the loveliness of nature in soft azulit skies with varied landscape outlines, but left the presence of man's creative genius in the matchless forms of architectural taste—the slender Corinthian column, the finished capitals, and the other exquisite orders of classic style. He appreciated the flexibility, the force and polish of the ancient Greek tongue, the language of conversation around him, the medium of the teachings of philosophy, of eloquence, of poetry; for in his address to the Athenians he quoted from the ancient Greek poets in saying: "For in him we live and move and have our being; as certain also of your own poets have said, for we are also his offspring." The Greek poets thus referred were Aratus and Cleanthes, the mind of the former kindling under the light of nature, centuries before the Christian era; recognized the Supreme Being, in declaring

"He animates the mart and crowded way,
The restless ocean and the sheltered bay;
Does care perplex? Is lowering danger nigh?
We are his offspring, and to Jove we fly."

In the same spirit the other ancient poet exclaimed:

For we thine offsprings are, all things that creep are but the of the voice divine.

In pursuing the subject in this direction for a moment, by glancing again at the relations of this sublime teacher of the new dispensation, the first missionary to extend his teachings beyond Judea, the fact will not be overlooked, that this inspired person united to profound learning in language, philosophy and poetry, the knowledge of a manual art acquired in obedience to Jewish law, and that, whilst filled with living images of beauty around him, in nature, in the dominion of art and of mind, he negatively bore testimony of his appreciation of these, when he exclaimed to the Corinthians:

"Eye has not seen nor ear heard, neither hath it entered into the heart of man to conceive the things which God hath prepared for them that love him."

The Greek taste, at a period more than two centuries, antecedent to this, had passed to the Italian peninsula. Archimedes, a native of Syracuse, in Sicily, an island which had been settled by the Greeks, but afterwards became a Roman province, was renowned for his knowledge of geometry, and the laws of mechanism. He had demonstrated the laws of the lever, and the important principles of the centre of gravity. He resisted, by his mechanical genius, the attacks of the Roman consul, Marcellus, in the siege of Syracuse, one of the most remarkable in ancient warfare, having seized with his machinery the Roman ships, raising them into the air and shattering and sinking them into the deep.

THE ARTS AND SCIENCES OF PAST AGES.

Republican and Imperial Rome was adorned too with structures of beauty and taste. The Eternal City, seated on seven hill, the centre in the ancient world of political power for a thousand years, had risen from being a scattered village of cottages on the Tiber, to be the abode of a population variously estimated at from two to four millions. It was adorned with magnificent edifices, temples, amphitheatres, buildings for the assemblies of the people, porticoes, piazzas, triumphal arches, trophies and public sewers. Its aqueducts were works on a stupendous scale whilst Roman territory was, from the centre of the State to its circumference, traveled by public highways, constructed with immense labor, through masses of rocks and hills, by embankments with bridges spanning marshes, ravines and rivers; connecting the provinces, forming lines of communication through Southern and Western Europe; extending even into Asia; crossing the island of the Mediterranean Sea; main lines having been established by the Romans even in England, from north and south, and from east to west. The present city is embellished with massive structures of modern mechanical skill, attracting at the same time the antiquarian and man of science, by the ruins of the ancient triumphs of mechanical arts—the Column of Trajan, of Antoninus, the Pantheon, the ancient Forum, the arches of Severus and Titus, the Temples of the Sun and Mercury and the Coliseum.

RISE OF THE ROMAN EMPIRE.

The distinguished historian and philosopher, Edward Gibbon, visited these ruins in the last century, with the intent of writing the history of the city. As he sat gazing upon them by moonlight, and heard around the chanting of religious orders, his luminous intellect rising from the contemplation of the scene immediately before him, determined to inquire into the causes of the decline and fall of the Roman Empire, and, after years of labor, gave to the world of letters his great work on that subject.

In the progress of time, disintegrating causes and desolating agencies shook to pieces the ancient fabric of political power, detaching, near the middle of the fifth century, from the central authority, the Colony of Great Britain, which in turn became the land of the Anglo-Saxons of our forefathers—a race which, in a struggle of fourteen centuries has steadily advanced in the arts sciences and letters, elevated by the teachings of a sublime faith, intellectually expanding under the influences of civilization, developing and rendering practical to the noblest uses the laws of mechanical science.

DAWN OF THE ANGLO SAXON RACE.

We trace with interest and undissembled pride the progress, growth and development of social and political institutions from the time the British Islands, by separation, ceased to be a Roman Colony, until the termination, in the eighteenth century, of the six years' war between Great Britian, France and Spain, for colonial ascendency. During that period of over a thousand years, amidst domestic convulsions, foreign wars, and in passing through the dark eras of the feudal ages, there has been a steady advance in the militarian arts, in improvements, in domestic economy, in the social system, and political institutions; in the last, by the establishment of the trial by jury, by securing Magna Charta, which Mr. Hallam calls the key stone of English liberty—in the recognition as a legislative powers in the *Witena-gemot*, or National Assembly, resembling in some respects the Lords and Commons united in one body; in the enactment of the *Habeas Corpus Act*; and above all, in the recognition of the freedom of the press—the press, which was called the *fourth*, but is now the *first*, estate of a free paper.

De Lolme, in preparing his profound disquisition on the British Constitution, ransacked folios containing the compilations of the English law, to find authority guaranteeing the liberty of the press; not having succeeded, he called upon Mr. Justice Viner, Professor of the Law Chair, to point out to him the legal guarantee in that respect. "It will not be found in the Statutes," was the answer, "it exists because not forbidden."

THE FREEDOM OF THE PRESS.

The fundamental law of this land, among its noble guarantees of individual and public rights, has, by express provision, given security to the press in its high calling, as the great teacher of society in all the relations of life, and as the guardian of individual and public rights.

During the three quarters of a century which elapsed from the British revolution of 1688, until the treaty of peace in 1763 between the three great powers, the influence of the working and mechanical classes was steadily on the increase. The education of the laboring masses had been gradually improved, and the true principles which govern labor and capital were better understood. Mechanical forces had been successfully applied to meet the wants of man from the cabin to the castle, from the ship on the Thames to the leviathan ships on the ocean, and those principles had been elucidated and reduced to the exact forms of science.

DEVELOPMENT OF MECHANICAL SCIENCE.

The lever, the inclined plane and the pulley, were regarded, in practice as in theory, the great mechanical powers; the wheel and axle being a continual and revolving lever—the wedge a double inclined plane—whilst the screw, as a revolving inclined plane, is so known in mechanics.

When peace was established, near the middle of the last century, new vigor was given to the material interests of great, interest of Great Britain. Her mechanical and laboring classes, co-operating with capital, directed by the ruling minds of the country, rapidly increased her wealth and developed her resources. The fields of agriculture were enlarged, new and improved agencies applied to bring from the earth increased supplies. Towns and cities were improved, the sphere and power of machinery was expanded. The nation felt the presence of increased wealth which poured into the centres of British trade by British industries and conquests, and labor, harmoniously uniting with capital, moved its herculean powers to noble ends, making new and more comfortable abodes for the laboring classes, and building stately castles and palaces.

Improved principles were introduced in ship building, and vessels of increased strength and size were added to the naval and commercial marine, the former, as the wooden walls of England, to assert her power and protect her com-

Agriculture.

THE SETTLER.

BY A. B. STREET.

His echoing axe the settler swung
Amid the sea-like solitude,
And rushing, thundering, down were flung
The Titans of the wood;
Loud shriek'd the eagle as he dash'd
From out his mossy nest, which crash'd
With its supporting bough,
And the first sunlight, leaping, flash'd
On the wolf's hunt below.

Rude was the garb, and strong the frame,
Of him who piled his ceaseless toil;
To form that garb, the wild-wood game
Contributed their spoil;
The coal, that warm'd that frame, disdain'd
The tinsel, gaud, and glare, that reign'd
Where men their crowds collect;
The simple fur, untrimm'd, unstain'd,
This forest tamer deck'd.

The paths which wound 'mid gorgeous trees,
The streams whose bright lips kiss'd their flowers,
The winds that swell'd their harmonies
Through those sun-hiding bowers,
The tempest vast—the green arcade,
The nestling vale—the grassy glade,
Dark cave and swampy fair;
These scenes and sounds majestic, made
His world, his pleasures, there.

His roof adorn'd a pleasant spot,
'Mid the black logs green glow'd the grain,
And herbs and plants the woods know not,
Throve in the sun and rain.
The smoke-wreath curling o'er the dell,
The low—the bleat—the tinkling bell,
All make a landscape strange,
Which was the living chronicle
Of deeds that wrough the change.

The violet sprung at Spring's first tinge,
The rose of Summer spread its glow,
The maize hung out its Autumn fringe,
Rude Winter brought his snows;
And still the lone one labor'd there,
His shout and whistle woke the air,
As cheerily he plied
His garden spade, or drove his share
Along the hillock's side.

He mark'd the fire-storm's blazing flood
Roaring and crackling on its path,
And scorching earth, and melting wood,
Beneath its greedy wrath;
He mark'd the rapid whirlwind shoot,
Trampling the pine tree with its foot,
And darkening thick the day
With streaming bough and sever'd root,
Hurl'd whirling on its way.

His gaunt hound yell'd, his rifle flash'd,
The grim bear hush'd his savage growl,
In blood and foam the panther gnash'd
His fangs, with dying howl;
The fleet deer cross'd its flying bound,
Its snarling wolf-foe bit the ground,
And with its moaning cry,
The beaver sank beneath the wound
Its pond-built Venice by.

Humble the lot, yet his the race!
When Liberty sent forth her cry,
Who throng'd in Conflicts deadliest place,
To fight—to bleed—to die.
Who cumber'd Bunker's height with red,
By hope, through weary years were led,
And witness'd York Town's run
Blaze on a Nation's banner spread,
A Nation's freedom won.

VINEGAR FROM UNRIPE FRUIT.

Unripe fruit, especially apples and pears, as are well known, is much used in the manufacture of vinegar; but the process usually adopted is defective in many important points. We therefore give, for the benefit of our readers, the substance of an article from Granger's Manual of Vinegar Making, just published in Germany, which may, perhaps, serve a useful purpose. The principal fault of the old process consists in throwing away the pulp after the juices are expressed. As this, however contains a large percentage of starch, excellently adapted for conversion into vinegar, it is necessary to prepare the fruit so as to save this portion of its substance. With this object it is to be grated, exactly as potatoes are prepared in the manufacture of starch, and the pulp passed through a moderately fine sieve, or through a coarse and open meshed cloth. There is thus nothing left behind but pumace proper, or cellulose, all the starchy matter has been passed through the sieve with the juice. This is next to be diluted with water, in proportion to the quantity of starchy matter thus obtained; and the whole is then placed in a clean copper kettle, one or two per cent. of concentrated sulphuric acid being added, and heated long enough to transform the starch into grape sugar. The sulphuric acid is to be neutralized by means of carbonate of lime; the gypsum or the sulphate of lime thus produced allowed to settle, and the liquid is to be left for fermentation to take place, with or without the use of yeast. A liquid having 8 or 10 per cent. of sugar can easily be made to have 4 or 6 per cent. of alcohol after fermentation, which, by its subsequent acidification, will yield a vinegar of 5 to 6 per cent. of acetic acid.

A RARE ENTOZOON IN THE HOG.

BY DR. T. S. COBBOLD.

Yesterday (Jan. 10th), I received a letter from Prof. Wm. B. Fletcher, of the Indiana Medical College, Indianapolis, U. S. A., enclosing several minute fragments of one or more parasites, with a request that I would inspect, determine and report "as to what they are." Microscopic examination at once revealed their strongyloid character; and I subsequently satisfied myself that they were examples of a remarkable parasite, known only to systematists in helminthology under the title of *stephànurus dentatus*. It was not surprising, therefore, that Dr. Fletcher should seek in vain through the works of Von Siebold and Kuchenmeister, and my own general treatise, for any account of this entozoon.

The *stephanurus* was first described by the late Dr. Carl Moritz Diesing, of Vienna, in 1839, and I am not aware that any one has since met with it. Fortunately, through Dr Diesing's kindness, I am possessed of an almost complete set of his writings, among which is the valuable monograph containing a full and accurate description of this worm. Without, however going into details about the singular character of the parasite, I will only remark upon one or two important practical matters.

Dr. Fletcher says that "in demonstating the function of the liver" to his class, he "found a worm in the portal vein, hepatic substance and hepatic vein;" and further, that "upon examination at the packing houses, where two thousand hogs are killed daily," he "found this worm in nine out of ten hogs" which he examined. I am not quite sure whether he means nine out of *every* ten hogs, or if he only examined ten hogs altogether. In either case, the observation is a very remarkable one. It is added that the kidney, bronchi, and portal vessels formed the most frequent habitat. He also "found little cysts in the pyramids of the kidney," and likewise "excavations in the lobules of the liver containing great numbers of the eggs."

The above facts are too important to be remarked upon in all their bearings; but I may note that, whereas this parasite was originally found singly, or several together, occupying cysts in the fatty tissues of the hog, Dr. Fletcher finds it occupying various organs. The true discoverer, Dr. Natterer, obtained his specimens from one or more individuals of a Chinese race of hogs at Barra do Rio Negro, Brazil, on the 24th of March, 1834. Here, then, we have a parasite hitherto only once met with in a particular race of swine reared in South America, now found, after more than thirty years' interval, to be remarkably abundant in hogs killed for curing in Indiana, North America.

I regard this discovery by Dr. Fletcher as exceedingly important, since it not only shows how readily the mere existence of entozoötic diseases amongst animals (used as food) is overlooked; but it also shows to what a degree parasitism may abound without exciting any suspicion in the minds of those persons whose duty it is to look after the welfare of our cattle, sheep, swine and other domesticated animals.—*British Med. Jour.*

FENCES.

The fences of the United States have cost more than the houses, cities included; more than ships, boats and vessels of every discription, which sail the ocean, lakes and rivers; more than our manufactories of all kinds, with their machinery; more than any one class of property, aside from real estate except it may be the railroads of our country.

In an article on this subject, the *Peoples' Journal* says that the first cost of the fencing in New York was between one hundred and fifty and two hundred millions of dollars. Assuming this to be approximately correct, and estimating the first cost of fences in other States on the same basis, we have as the total first expense of the fences of the country the vast sum of $1,266,000,000.

This will require to be renewed at least once in ten years, and this gives an annual expense of $129,600,000, with a large sum to be added for repairs constantly needed. This makes up a formidable aggregate

In Europe, where very few fences are found, there is no inconvenience felt by the people. In France, Germany and Holland, farmers hold their lands in common, with only narrow paths between. There the annual tax our people have to submit to, of $1 50 on every acre of improved land; the cost of fencing, is not known. Here the fence tax is much more than the aggregate of state and local taxes.

In Missouri and California, the advocates of a reform in fencing laws are making vigorous exertions to accomplish their purpose, and every day public opinion is growing stronger in favor of the change. Here, in Kentucky, where the suggestions are novel, and the people have not thought on the question, the proposition may be somewhat unpalatable; but the time will come when self-interest will force a change in opinion and policy.

SUMMER FALLOWING.

It seems to be fully demonstrated by past experience and present observation that had our farmers followed the example of Nature and seeded their grounds before the rains, they would now be able to rejoice in the prospect of at least moderate crops, instead of mourning, as many of them do, over the almost absolute certainty of a failure. On the plain lands there is no certainty of a crop without summer fallowing. By Summer fallowing a pretty fair crop can be secured in the driest season.—*Examiner.*

The other day, while a teacher was hearing boy recite his lesson, the following passage occurred: "The wages of sin is death." The teacher wishing to get the word "wages" out by deduction, "What does your father get every Saturday night?" The boy answered promptly, "He gets drunk."

AGRICULTURAL GRANDEUR.

[The Santa Clara *Agriculturist* some two week since speaks of their County Society warmly, and the great predominance they give to the *Horse Racing* interest over all other interests of the County.

The FARMER has for several years presented this subject to our Farmers, pointing out boldly and fearlessly the very great injury thus done, but if the *Farmer wants a change in the plans of the Society they must elect Farmers as the officers.* If Horsemen rule a Society they of course look out for their own interest first, this is a natural conclusion. The remedy for the evil is in the hands of the Farmers themselves, a society of Horsemen will look after the "Horse Interest" very naturally. Were our Agricultural Societies under the control of the Practical Farmer, the Grain-grower, Orchardist, Vineyardist, Sheep-raiser, Hop grower, Silk Culturist, &c., then these interests would be cared for *first*, and "Horse Racing" *secondary*, then they would probably form Societies by themselves, this would be much more desirable, and this change would greatly advantage our Agricultural Societies. What says our Santa Clara cotemporary to this?—ED. F.]

The Santa Clara Valley Agricultural Society offers a magnificent scheme of three thousand nine hundred and fifty dollars for the encouraging of Horse Race gambling. This they designate the "Speed Programme," and all *fast men* as well as horses are supposed to "go after" the *profits*.

Nothing is said in the programme about "Pool Selling" or outside betting, but all those who have been there know how things and horses run at the ——. As this "enterprise" is to blossom "in the interests of Agriculture," of course it must be a sweet-scented affair; for is not Agriculture the noblest employment of man?

Every progressive farmer is urged to be on hand to lend aid and comfort to, and participate in the exercises of the noble occasion, setting a high example for his hopeful growing sons and daughters to follow. Remember, the racing runs through the whole week, commencing the 28th day of August. Bring along the family with what spare change you can freeze to, so as to give the children a chance to become educated, civilized and enlighted in "the department" so worthily and liberally supported and patronized by the GREAT Agricultural Society of this county.

Only think, and be devout, O, Independent Farmer, the Society holds some $60,000 worth of property in their "Stock Grounds," *for the use of the Farmers of this county.* Is it but in accordance, then, with the high purpose of this "Instrument for the public good" that they should offer nearly $2,000 more in premiums *for Racing* than for all and every other thing, including stock of all kinds?

If the farmers of this beautiful garden spot of the Pacific do not appreciate what is being done for their advancement, elevation and prosperity by this "rich and respectable Society, they must indeed be stupid.

A Grand Opportunity!

SECURE YOUR ADVERTISING.

A LARGE EDITION OF THE

"DAILY FAIR GAZETTE"

Will be issued and DISTRIBUTED FREE throughout the PAVILION every day during the

EIGHTH INDUSTRIAL EXHIBITION

OF THE

Mechanics' Institute,

Affording the BEST MEDIUM for Advertisers ever offered in San Francisco,

As only a limited space can be devoted to ADVERTISEMENTS they should be handed in as early as possible to insure insertion. Orders received by our Agents, and at the office of

FRANCIS & VALENTINE,

Printers and Publishers,

517 Clay Street, 510 to 514 Commercial Street,

366 SAN FRANCISCO.

Best machine ever offered for paring, coring, quartering or slicing apples. Does the entire work expeditionsly, promptly and well—separating core and parings from fruit at once. Will prepare more fruit for drying, pies, or family use than six ordinary parers. For farmers it is indispensable. Fruit can be taken care of in season, instead of allowing it to rot in the orchard. Three times the price of th parer can be saved on every crop. A barrel of apples can be got ready for pies, in one hour, saving in labor alone, in a single year, many times the cost of the parer. Territory for sale. Agents wanted. Send for circular.

OIL CAKE MEAL

THE BEST FEED KNOWN

FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or those growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other foods as to the percentage of flesh produced from a hundred pounds of food, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent, Oil Cake Meal, 21 2-100 per cent. For its fat-containing properties to all stock and to sudden changes of weather or over-driving has no equal

For MILCH COWS it is particularly valuable, increasing the quantity of milk and giving a quality to a far greater extent than any food known. A suitable quantity for those at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food generally mixed with the mash of bran slops, roots, or cut food of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no food known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price $40 per ton, it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

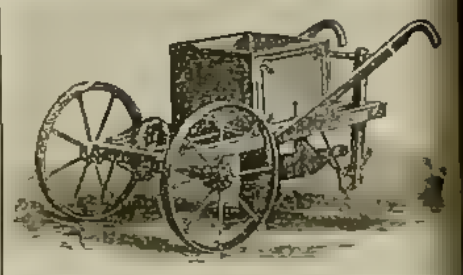
TRUE'S

IMPROVED

POTATO PLANTER.



This is, undoubtedly, one of the most valuable Machines adopted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse, plant six acres of potatoes in a day, is of inestimable value; because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor-Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

A NEW ARTICLE.

Composition Pipe for Conducting Water.

THE ATTENTION OF RAILROAD COMPANIES, Farmers, Dairymen and others, is called to our new Pipe for leading water. It is lighter than ordinary lead pipe, and much cheaper than iron, will stand a heavy pressure, and deliver about one-third more water than iron pipe, provided the sizes are the same.

We are now manufacturing all sizes, from one-half to two-inch, and can fill large orders at short notice and put on reels for shipment, the same as lead pipe.

Samples can be seen at our office,

No. 11 California Street.

WINE MAKING AT THE EAST.

The Kelley's Wine Company, located at Kelley's Island, (Lake Erie), Erie County, Ohio, was incorporated in the spring of 1866, with a capital of one hundred thousand dollars, with privilege of increasing to two hundred thousand dollars, (which is about to be done).

In the fall of 1866 the company had organized, the capital having been nearly all subscribed. They rented the famous cellar belonging to Mr. Chas. Carpenter, which is the *largest cellar*, in one room, probably in America, being 126 feet long 37 feet wide and 16 feet high under the center of the arch. The sides of the walls are of solid rock just as nature made it. A block of lime stone of the size of the cellar having been quarried out. A *scaffold* put into the sides and an arch thrown over from the stone quarried in excavating for the cellar.

The company have four tiers of 1,000 to 1,600 gallon casks running the entire length of the cellar, and two tiers over the two center ground tiers, of 600 gallons each, there being just 100 casks containing from 500 to 1600 gallons each. There are also a large number of 200 and 300 gallon casks *chucked* in between the side tiers of casks, above the front end of the casks. The company had over 100,000 gallons stored in this cellar last fall, of the choicest quality of native wines, principally Catawba, the assortment being made up of Concord, Oporto and Delaware.

The Company also manufactured from the *pomace* and *lees* about fifteen hundred gallons of pure catawba brandy.

The company have commenced the manufacture of "sparkling catawba" or champagne of a very superior quality, connoisseurs pronouncing it equal, if not superior, to any made in America and it is being sold at a much lower price than has heretofore been asked, not because the quality is inferior, but that they can afford to do it and make a living profit, depending on large sales and small profits.

Mr. C. W. Farciot is the superintendent of the wine making department, a skillful and scientific wine and brandy manufacturer, and also a gentleman in every respect.

The officers of the company are: Addison Kelley, President; A. S. Kelley, Treasurer; Erastus Huntington, Secretary; C. W. Farciot Superintendent. Associate directors, N. Kelley, Vice President; R. Noguinity, Detroit Michigan; W. A. Simpson, Sandusky Ohio; Geo. C. Huntington, New York. G. C. Huntington resides in New York, and is the manager of the company's interest in that section of the country, and orders addressed to him at No. 30 West Broadway will receive prompt attention.

It is the intention of the company to build a new cellar for the present year's vintage capable of containing 250,000 gallons, in addition to the cellar before alluded to, giving a capacity of 350,000 gallons.

The grape crop never looked so promising before as now, at this season of the year. It is estimated that the 800 acres which are planted with grapes on the Island, will produce on an average at least four tons to the acre, or an aggregate of 3,200 tons which at 13 pounds to the gallon will produce nearly 500,000 gallons of wine.

The Kelley's Island Wine Company guarantee the quality of their wine to be equal to any ever made in the United States, and *claim* more than that for it, all they ask is a trial with the best, and let *results* take care of themselves.

They have the advantage of a choice of the grapes their needs require. Of having them *fresh from the vines*, of sufficient capital to purchase at lowest rates, of one of the best manufacturers in the world, of daily lines of steamers, to Toledo, Detroit and Sandusky, for shipping their wines, of five years experience in the business *as a company*, besides many years more as individual members, and also of a reputation that has become co-extensive with the country.—*Wine and Fruit Reporter.*

MODE OF CURING FIGS IN ASIA MINOR.

E. J. Smithers, Esq., United States Consul at Smyrna, communicates to the Department some facts in regard to the process of curing figs in that region. The fruit is allowed to ripen on the tree and to fall to the ground, where it is allowed to remain three or four days, or until dry enough to bear transportation. It is then collected in hair sacks, and tightly pressed, in order to save space and to prevent fermentation. The sacks are then taken early in the morning to the local market, where professional packers resort to purchase material for the day's packing. At the packing house the different qualities are assorted, and the fruit skilfully manipulated and moistened with salt water. Each quality is then placed in boxes of different sizes for the general market. The refuse is either sold on the spot for distillation of spirits, or packed indiscriminately, with the feet, into large boxes, to be sold as the most common quality. Figs grown here are of a large whitish variety, thin skinned, very juicy and sweet, but unpalatable when fresh. The first is largely cultivated in the neighborhood of Aidin, but the best quality is grown at Naoli.

Seymour, Indiana, has a melon patch occupying 1,700 acres.

Forgiveness is the odor of sweet flowers when trampled upon.

PROFIT IN PEACHES.

The Wilmington (Del.) *Commercial* gives some figures showing the amount received by a citizen of that State from his peaches during the past ten years. He says that in 1859 Mr. Fenimore planted 110 acres in peach trees, which yielded as follows:

Date.	Baskets.	Value.
1861	191	$206 28
1862	1,894	868 34
1863	18,423	15,051 61
1864	25,984	18,443 98
1865	22,124	23,070 25
1866	13,675	29,266 07
1867	27,500	18,561 40
1868	4,250	15,281 68
1869	34,000	14,464 37
1870	16,029	15,807 75
Total	164,050	$150,811 80

This year Mr. Fenimore will gether but 12,000 baskets from his ninety acres still remaining in peaches, which at their probable price of fifty cents a basket, would yield him $6 000. We take it that the prices given are the orchard price, that is, the grower's actual receipts, exclusive of transportation and commission charges. The figures also show that under some circumstances a small crop is as good as a large one, as for instance in 1868, where the crop generally failed, yet Mr. Fenimore received as much for his meagre yield of 4,250 baskets as he got subsequently for an immensely larger yield. That year he received $3 per basket.

CHOICE

AUSTRALIAN SEEDS.

We have just received from Australia a very choice collection of Australian Seeds, particularly of the

AUSTRALIA GUM TREE.

Of these we have SIX KINDS, and some never yet had here of new and choice varieties.

AUSTRALIAN WATER PLANT.

In this collection we also have the WATER PLANT, a rare flower known as *Villarsia Cathifolia*, which we shall introduce into our Lakes and Ponds.

JAPAN SEEDS.

These Seeds with a new invoice of Japan Seeds, Evergreens and Seeds of the Tea Plant, and also of the Camellia, make a collection of valuable Seeds, now for Sale at the

FARMER OFFICE.

GARDEN GROUNDS LAID OUT.

THOSE WHO WISH THEIR GARDEN GROUNDS renewed and replanted, or those who desire to have Grounds Designed and laid out upon Scientific principles, and with correct taste and skill, as

Adapted to this Climate,

can have this work done to their satisfaction by calling at this Office, where all the best works on Gardening can be found, and where the various Styles, both European and American, can be seen. Grounds of any extent, from

ONE THOUSAND ACRES,

to small Gardens, in our City, will be designed and laid out and the TREES, PLANTS, Shrubs and Vines, and Bulbs all supplied of the very best variety and reliable quality, and the work done to complete satisfaction, by calling at the Office of the California FARMER.

None but Educated men ever engaged in such work.

NEW

AGRICULTURAL

BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their special study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent Library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

THE GARDEN VEGETABLES OF AMERICA. By Fearing Burr.....Price $2 50

COMMISSION

SALES-ROOM

—AND—

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders shall be as explicit as possible as to what wants—describing as minutely as they can; and when they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose with factory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns several of which we have the exclusive sale for this Coast.

THE POTATOE PLANTER,
JEBB'S PATENT CHURN,
CHEESE CURD CUTTER
PATENT WEEDING HOE,
LIFTING HAY FORK,
WITH OTHER VALUABLE IMPLEMENTS.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

TREE SEEDS

OF ALL THE VALUABLE KINDS.

Also,

TOBACCO SEED.
COTTON SEED.
COFFEE SEED.
TEA SEED.

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental Seeds.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

FLOWERING BULBS.

RARE AND CHOICE KINDS

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown

Please remember that Lawns can be made so as to be perfect at any season of the year.

FINEST MIXED LAWN GRASSES,
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

EVERGREEN AND DECIDUOUS SHRUBS,
ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

ORANGES, LEMONS, FIGS,
Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries Gooseberries, Currants, and Blackberries,

PERPETUAL FLOWERING ROSES

Of the best kind

GREENHOUSE AND BEDDING PLANTS.

These are grown at our residence under our own care where they always can be selected.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference upon

WARREN & CO.

Farmers' Headquarters 320 Clay Street, up-stairs!

The California Farmer.

SAN FRANCISCO.

THURSDAY EVENING, AUGUST 17, 1871.

THE CALIFORNIA FARMER READING ROOM AND MUSEUM OF NATURAL HISTORY.

220 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready, to make a visit attractive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* of our *Journal*, to which we would direct their especial attention.]

THIS NUMBER.

Our readers will find in the Oration of Mr. Latham, which we publish in full, a document worth reading and preserving, and its length is an excuse for non-omission of Fair Reports till our next.

Our *European* Letter should receive attention especially of our Stock men.

We have numerous Communications, Books, Letters and Parcels received, to respond to next week.

COL. SAXE, AND HIS BLOOD STOCK.

We had a very pleasant visit from Col. Saxe at our office, and gladly record his arrival with so fine a Herd of Cattle and his splendid band of Cotswold Sheep.

This importation of Cattle and Sheep is the largest and best yet made into our State. We know them to be excellent, for in addition to the written testimony we have seen, we had a visit from a Kentucky Merchant, just arrived, who assured us that he knew the parties who had sold this stock to go to California, and they assured him that no finer stock had ever been sent out of Kentucky.

Col. Saxe will exhibit his stock at the Bay District Fair, at the State Fair, and at other Fairs of which due notice will be given.

We refer all Stock-men to the ADVERTISEMENT in our columns for particulars.

POULTRY EXHIBITION.

The Poultry Association of California by their Agent, Mr. Finley, make a very fine exhibit of choice breeds of Poultry this week at the Hall of Mercantile Library. This is the largest and best show ever made in our State, the Birds are real *Curiosities*. Lovers of fine Poultry should go and see them—the collection embraces all the choicest kinds known to Poultry fancier.

HOPS.

There is an increased attention being called to the cultivation of Hops, and this autumn a very large number of acres will be planted in various parts of the State.

THE RAILWAY.

Pres. Hallidie has won Golden opinions by the public for his grand Invention of the new Railway on the air, or rather "Wire-Ropeway."

COUNTY FAIRS.

SAN JOAQUIN VALLEY FAIR
AT STOCKTON,
Commences Sept. 12th, and continues four days

SANTA CLARA VALLEY FAIR,
AT SAN JOSE,
Commencing Aug. 28th, and continues five days.

THE MARIN DISTRICT FAIR,
AT PETALUMA,
Commencing Sept. 25th, and continues six days

THE AGRICULTURAL FAIR OF THE UPPER SACRAMENTO, AT CHICO,
Commencing Sept. 26th, and continues four days.

ADVERTISE!

Make your business known widely if you wish to prosper. No business man can lead in his trade without a judicious use of and a liberal expenditure of means in advertising. This is fully proved by all large advertisers, who have paved the way to a Splendid Fortune by ADVERTISING LIBERALLY.

CROPS, SEASONS, PROSPECTS, &C.

The Crops of all kinds in our State will compare well with any State in the Union, and show a GRAND RESULT in the *sum total* of EXPORT for 1871, equalling in our estimation the *sum total* of our Imports; this we esteem a good showing.

The Grain crop though slow at first coming in, begins now to show itself, and will soon magnify in goodly size, and crops have been, and will be reported from 50 to 65 bushels Wheat per acre as in the case at "Sherman Island" the present year, what other State can surpass it?

Our wheat made into Flour is now much sought for in China, what will be the quantity required to feed their vast millions in coming years? Where will our Flour find a market if, we make a war against the Chinese as a race and stop this trade? we should think of this.

Our Barley and Oat crop will be large, and so with our Hay crop despite all complainings.

Our Root crop will be very large. The Sugar Beet has been largely planted for our sugar houses, and the yield will be very satisfactory.

Our Flax, Castor Bean, Cotton, Hops, and other crops will far exceed estimate and swell our products for export. Our Beans, Corn, Potatoes and Fruit are now all more or less exported; these add to our wealth, and although in the business mart there is complaint of "dullness in trade" yet the future prospect is bright for our State.

Business is always affected to dullness when a Political Typhoon is passing.

The weather has been very favorable for our Harvesters this year, and they all feel much better at the *results of their measured crops*, more so than they did at the appearance of *their grain fields*, and for better *results* they should be grateful.

THE MECHANICS' FAIR OF 1871.

This year's Exhibition at the Pavillion is destined to be a very great success in all the material elements that make success.

The extent of the articles shown, their great excellence and their real utilitarian value, the evidence they manifest of the progress of the "Mechanic Arts," of "Manufactures," of "Invention," of the "Fine Arts" and of the "Public Taste" generally. These with the *refreshing* Garden of "Floriculture" and "Horticulture" all united, bear testimony to the Grand Progress our State is making in all the various avenues that open up our Prospering State.

We have notes of many Departments of Agriculture, with her splendid implements, and Horticulture and Floriculture also, and the various other striking features which mark the Pavillion as the Palace of Industry, Art and Beauty, these we in our own way shall picture.

The present week we give our columns to the most admirable Oration of Mr. Latham, which deserves to be read by every citizen of our State, giving four columns to this, we defer much prepared matter till our next, when with President Hallidie's Address we shall give our sketch of

"What we see in the Pavilion."

EMIGRANTS TO THE PACIFIC COAST.

One of our Eastern Exchanges says:

"It is said that an American firm has offered to take as many of the Paris insurgents as the Government of France likes to make over to them, intending to conduct them—men, women, and children—to some large tract of land in Oregon, where each would receive a certain number of acres and be employed in clearing the forests, but Thiers has declined the offer.

We are glad "Thiers" declines. This is not the class of settlers we want now, we have tens of thousands here already who want *labor*, and want *Bread*. Let any person go to our "Labor Exchange" and see the European laborers waiting there for work. We want no more such—we want manufacturers, mechanics and men of families *who have means*, so that they can immediately *become producers*, and not loaf around our city till *charity* feeds them.

California has already suffered greatly by an *excess* of Emigrants who are without means. Let us now so present our State and Coast abroad, that she shall draw to our shores men of means, of skill and of intelligence, who are qualified to aid in advancing the State in her great interests.

FARMERS, COME SEE US.

Farmers, Stock Raisers, Vineyardist, Florist, and all who are interested in the cause of Agriculture, Horticulture and Floriculture, are respectfully invited to call and pay a visit to the FARMER OFFICE when they come to visit the MECHANICS' Fair especially as we have much to offer them.

All the leading Agricultural newspapers in the Country on file.

Farmers will find a large *Library* upon every branch of Science, Herd Books of Stock, and we shall always have some samples of CHOICE SEEDS for every one of our Subscribers and Patrons that call.

Strangers from abroad will always be made welcome, and all and every information given them of LANDS, and FARMS *for Sale*.

The MUSEUM of the FARMER OFFICE will show them many Rare and Curious things of the early day of CALIFORNIA, and *specimens* of its *History* and *Resources*. We Bid all Welcome.

THE FAIR GAZETTE.

This pleasant and sprightly Daily, or *Evening Gazette*, is a very popular and eagerly sought for document, as all who have articles on exhibition scan its pages, to see *how well* they are "Gazetted."

The *Gazette* does great credit to the Publishers, Messrs. Francis, Valentine & Co., popular Printers and Publishers of our city.

FINE BLOOD STOCK.

All who value fine Blood Stock, and were at the last State Fair at Sacramento, will remember well the splendid Sheep imported into California and then exhibited at the Fair by Colonel Saxe, the well known Stock-man, who prides himself in always exhibiting "Only the Best," and whose familiarity with Blood Stock, and his knowledge of it is such, that he can talk *Stock* as familiarly as his famed brother the Poet can talk beautiful Poetry; in fact we believe the present "Saxe" makes the fine forms and comliness of his Stock to appear on his brain like images of Poetry, which in fact is so, for Fine Horses, Cattle, Sheep, Swine, Poultry, and all *Blood* animals are Pictures of Beauty; and Col. Saxe has now brought to California a large number of animals so really fine, comely and beautiful, that if "Rosa Bonheim," that gifted one were here, she would exclaim in her enthusiastic love of fine animals,

"LET ME PAINT THEM."

To come to realities and plain notes, we are glad to welcome here again our well known Stock man, Col. Saxe, with his ("Herds of) Durhams" and his bands of "Cotswolds," which we know are of the Pure Breeds, and of high repute, as Col. Saxe has brought with him the very highest proof of their value in complete Pedigrees, these, attested to by the most distinguished men of Kentucky.

The Cynthiana *News*, a paper from the Stock region of Kentucky, says of Col. Saxe:

"He has bought twenty-three short-horn bulls and heifers, from fourteen to thirty months old. Most of the herd are from fourteen to sixteen months old. Nineteen of the number are thoroughbred "American Herd Book" registered. These are pure reds, whites, roans, varied and red and white, the red largely preponderating. His grades, four in number, are seven-eighths pure. All the herd are as "fat and sleek," handsome and perfect as can be found in our famous stock growing States. Seven of the herd, of the elder John Allen and General R. M. Gano, of Bourbon county, who are of our best, and most useful and noted breeders in Kentucky. The balance of the animals were bought and selected from the herds of eight others of our best stock raisers, viz: Horace Miller, W. A. Cunningham, Pleasant Lilly, Noah S. Patterson, James Miller, Williams & Veach, Jesse Lovely and Matthew Kenney.

For the past eight weeks Colonel Saxe has been buying extensively the wools of our section of the State and while doing so he has selected 160 head of thoroughbred "Cotswold" ewes and rams, from thirty-five folds, viz: Lilly, Smith, Allen, Graves, Keller, Shropshire, J. L. and N. S. Patterson, Withers, Whaley, Craig, Penn, Snell, Anderson, McConathy & Son, Headley Weathers, Bedford, Barr, Dillard, J. T. Burgess & Bro., Hildreth, Sandusky, David, Kennedy, J. S. & W. M. Kenney, McClintock, Redmon, Cunningham, Rosebery, Hunter, Moore, Talbott, and others. In all cases he has a written "pedigree" and "certificate" of the thorough breeding of every animal he has bought, and our readers will not fail to note that he has traded with the most responsible and best stock growers in Kentucky. In paying his money he has taken his choice.

This is a largest exportation in number and cost, ever made from Kentucky, that has come to our knowledge.

DESCRIPTION OF COTSWOLD SHEEP.

From Agricultural Reports at Washington.

On Page 340, Mr. Wing, of N. Y., says he bought his "flock of Cotswold sheep" of "Mr. Lane of Broadfield, Eng., his name standing at the head of breeders in the Cotswold hills." "These sheep are known for their heavy and valuable fleece, their great mutton properties and strong constitution. The wool is very long, with bright lustre, known as combing wool in our markets, being the most desirable and the highest priced of any. It averages twelve inches in length and the fleeces from *ten* to *fifteen* pounds each, some rams fleeces as high as *sixteen* to *eighteen* pounds each." Mr. Wing's flock averaging *twelve* pounds." His ram "Golden Fleece" was sired by "Cotswold King" who sold for 230 guineas. The fleece of "Golden Fleece" was over 18 lbs.—12 months' growth." Mr. Randall says, Page 343, "I have known a pound of Cotswold wool to produce as much clean fibre as two pounds fourteen ounces of Merino ram's wool." On page 345, Mr. Dodge says "It is never claimed that a flock of Merino ewes bring forth, and bring up, as large a percentage of lambs as long wool breeds. Returns to this office show an advantage of *sixty-seven* per cent. in favor of the latter in this respect," and "that at the price of the long and soft fleece has now reached the value of the finest of the Spanish race, there is still more manifest economy in the keeping of the thrifty races—as what was profitable *before*, must *now* be more remunerative," and a record of five Cotswold wethers, was 217, 223, 204, 223 and 243 lbs., and five other wethers 21 months old averaged 188 lbs.—"these are not extra but are easily attained at an early age" Page 349—Mr. Dodge think these sheep will thrive on the luxurious herbage of the great plains—basins of the Rocky Mountains, and the parks of Colorado, and among the miners and people of the cities as they *will have* a better quality than Merino mutton—says also, that "in Conn., they yield *fifty* per cent. more wool than the old stock and of superior quality," and in Seneca Co. N. Y., "they are sought after for wool and mutton combined—live on coarser feed—lambs are hardier—more easily raised, and mature much sooner." Page 351, says "Cotswold fleeces are put at *eight* pounds in Penn." and in Ohio, "Cotswolds are taking the place of Merino, do better, more healthy, require less attention and are more profitable, and in Virginia. Page 352, * * * prefer the Cotswolds, considering their wool more valuable."

We conclude this notice of the Importation of Cattle and Sheep into our State by announcing it as most worthy of particular attention of all our Stock Raisers.

[*Continued from Front Page.*]

merce the latter to seek new avenues of trade with European States, the then American Colonies, and even into the distant Indian Seas. British power which first obtained a foothold on the Indian mainland by the cession 1639 of a small strip of Territory, where Madras now stands, has been gradually expanding so as to now embrace over one million, four hundred and twenty-seven thousand square miles, with a population of one hundred and seventy millions.

INCREASE OF OUR POLITICAL STRENGTH.

In recurring to the stirring events near the middle of the last century, when Great Britain wrested from France the Canadas and other French possessions on this continent, it will be borne in mind that in the Treaty, before mentioned, of 1763, which followed, the King of Great Britain had to limit, and did restrict, the western boundary of the thirteen English Colonies, the nucleus of this Republic, to the middle channel of the Mississippi river—"irrevocably" is the term used in that instrument—and relinquish to France all the territory claimed by that power, west of the river. So with *that* as our Western boundary, having the Atlantic on the East, the great Lakes on the North and the 49th parallel, and on the South the 31st degree of latitude with the St. Mary's to the ocean, we emerged from the war of the revolution as the United States of America, with a surface *then*, but little in excess of the area of our present territory embraced in the Pacific slope.

Now, gentleman, what mighty changes have taken place within the last one hundred years! The progress of mind during that time, in political science and mechanical arts, is centuries in advance of any previous period of the world's history. In political science the statesman of the American Revolution, who declared the principles upon which this republic was founded, were admitted by Lord Chatham to be an assembly of the most illustrious of the men of age like. They make an issue with the states man of England in the British Augustan age of science and learning. It was a political and business issue, and upon it they staked all that was dear to man. Upon the closing of the revolutionary struggle the attention of the leading minds of that age was engaged in the important consideration of forming a more perfect government, which resulted in the formation of the Constitution which went into operation in 1789. In the discussion that preceded the adoption of that instrument, difficulties arose in settling the relations which should exist between the small and large States. Finally it was determined that the States in their seperate capacity should be represented as equals in one branch of the legislative department, whilst in the other the representatives should be chosen in the ratio of numbers from the States. A principle never before brought into practice in any of the enlightened governments of the past, by which the States and people of the Union are completely represented in the national councils. When this constitutional provision was adopted, Dr. Franklin rising in convention and pointing to an ancient painting upon which the lower edge of the sun was touching the horizon, said: "Mr. President, it has been a question with artists whether that sun is setting or rising. As a symbol of this Union it is in the ascendant." Mr. Madison foretold its capacity when he declared it would be found to be equal to the wants of the multitudes which should be spread over this continent. These predictions have been fully realized, for since our entrance into the family of nations the limits of the Republic have been expanded—first by the treaty of 1803 with Napoleon ceding Louisiana; next with the treaty of 1791 of Spain ceding the Floridas; then the admission in 1846 of Texas into the Union; the treaties of 1848 and 1853 with Mexico, and finally the treaty of 1867 with the Czar of Russia, by which was conveyed the whole of Russian America. So that the boundaries cover near four million of square miles, reaching from ocean to ocean, through 58 degrees of longitude, and 25 degrees of latitude, from the northern lakes to the Gulf of Mexico. Our coast on the Atlantic with the gulf line extending from the St. Croix to the Rio Bravo del Norte; our Pacific sea coast with the exception of British Columbia, stretching from the artic circle to the 32d parallel, giving us commanding position on the Pacific, and looking eventually to the control of the trade of the East.

Such have been the results with us of political science in founding institutions possessing vigor and strength equal to the most serious emergency; in successively passing through wars, and grappling with domestic violence emerging from the most severe trials to which a people can be subjected, having renewed vigor, with consolidated power and now standing in the front rank of the nations of the earth.

THE RELATIONS OF LABOR AND CAPITAL

Now, gentlemen, in the period mentioned, mechanical science and art have achieved signal triumphs and wrought out marvelous results. "The ancient languages," said an erudite scholar, "are the golden keys which unlock the treasuries of antiquity." It may, with equal force be said that labor and capital are the golden keys which unlock the treasures of nature an impart the prosperity and happiness to the people. The principle controlling the value of labor is supply and demand. The more capital there is introduced into a community, the greater the demand for labor, and consequently capital is the real friend of laboring men. Labor must have its reward; and capital, which is the friend of wages naturally seeks profits. Combinations to arrest or suspend labor, are mischivous in practice, and prejudicial in results, for they lessen the funds for wages. There is no natural conflict between capitalist and laboring man; on the contrary they are of equal necessity to each other's prosperity, capital being dependent on labor, and labor on capital; an increase of capital naturally leads to increased profits, and is invariably accompanied by increased wages; in fact, such increase benefits in a higher degree the laboring. As capital and abor then are indissolubly united by the bonds of interest, let them join hands in harmony, steadily co-operating for each other's prosperity, thus subserving the ends of progress, increasing the comforts of our race, and enlarging the sphere of human happiness.

AMERICAN POPULATION AND RESOURCES.

Glance for a moment at the increase of population and material resources of this continent. In the year 1700 the total population of the Anglo-American colonies was 262,000. In 1749 and 1750 the population was 1,000,000. In 1775, upon the eve of an open rupture with Great Britain, it became necessary to ascertain the numbers of the people, and the result of the most careful estimate that could be made as the basis of taxation and raising armies, was that the total population then amounted to only 2,388,300. In 1789, the year in which the Constitution went into operation the total property valuation for taxes was $616,977,247, and the number of dwellings at that time 276,649. In the year 1860 our population had run to 31,443,321, whilst according to official and individual returns the real and personal property of the country in that year was in value upwards of $19,000,000,000.

In the year 1870 the inhabitants of the Union had risen in numbers to forty millions, and had by estimate over six millions of comfortable abodes; the crop of breadstuffs in that year having reached twelve hundred million bushels, valued at $1000,000,000; the country possessing fifty thousand miles of railway with a domestic trade six times the amount of our national debt.

The increase in the power of labor and improvements of machinery has been equally wonderful. Engines of colossal size and amazing strength and intricate contrivance, have been multiplied beyond precedent or conception. These iron giants, moved by the agency of steam upon sea and land, yield instantly to the command of man, rushing with impetuous ardor, or pausing at his touch. The capacity of these engines of power is far in excess of the manly strength of the human race. They traverse the highways and water courses of the globe, crossing oceans and visiting distant seas. The elements of life are breathed into them from the coal fields, which in the United States have a discovered area eight times the extent of the whole coal fields of Europe, besides the extensive regions of like material but partially developed between the Mississippi and the Pacific Ocean.

Perhaps the most wonderful evidence of man's power in the dominion of mechanical science, is that of the *Great Eastern*, a ship 684 feet in length, 86 in breadth and 70 in depth, capable of stowing 10,000 tons of coal, 5,000 tons of freight, besides accommodating 10,000 persons—a large city on the ocean; whilst our own Ironclad *Dictator*, which is a monitor will be the most formidable and irresistable armament ever launched upon the ocean.

THE PACIFIC COAST.

Now, gentlemen, turning from these great mechanical results, look at our great State extending along the bold shores of the Pacific, covering a surface of 189,000 square miles. What has mechanical science accomplished in this direction? Look at her as she was at the hoisting of the American flag in July, 1846 at Monterey, and look at her now. In less than a quarter of a century she has risen to the full proportion of a majestic State. 700 miles in length, and an average width of over 300 miles. Her vast industrial agricultural and mineral resources are beyond estimate. In skilled labor and other departments she is rapidly advancing to a permanent rank in the industries of the country. She has contributed to the metallic circulation of the globe nearly $1,400,000,000. Her commercial capital is adorned with massive edifices in finished style of architectural taste. The number of vessels annually arriving is 3,400, with a carrying capacity of more than 1,000,000 tons. She is united by railway to the great railroad system of the Republic, and by electric telegraph to all important points on the globe. Splendid steamers run from San Francisco to all prominent points on the Coast, to the Islands of the Pacific, to Japan, China, New Zealand and Australia. In the near future this State will command the Asiatic commerce and will be the great mart of trade, distributing it over the wide surface of the Union, turning the tide of wealth to our shores, and placing us in enviable relations to our common country, with whose interests we are linked for all time by an inevitable destiny.

From the light let us not forget

THE SHADE OF THE PICTURE.

With all our present and future commercial destiny, our great undeveloped mineral wealth, our agricultural resources, whose future value no living man can estimate, when the thousands of acres of virgin soil shall bear their golden harvests, yet with all this and even more we can never be truly independent while we neglect manufactures. Exports when in excess of imports alone make a State. For two decades we have paid tribute to the civilized world, enhancing values and stimulating growth to alien countries. Let our people produce what they wear and consume; let the busy hum of wheels of industry resound on every hill, by every water-course, telling of the increase of all the varied mechanism known to man's necessities. Skilled artisans will then throng on streets, and the music of wheels will resound on every side.

The solution of this problem is with yourselves. I am told told that in all probability the present will be your last exposition for ears. You may well feel proud as you invite inspection to evidence of your local wealth, and behold the results of so few years of experimental toil. But your tasks is but poorly done whilst so many shreds are in your woven present. My duty, prepared like moss-gathering in the midst of varied and constant occupations, is now discharged in this hasty *resume* of historical and mechanical progress. When at some future day, in future

years, you invite the State's people to behold your growth. I trust the greater part of our edifice will be devoted to the productions alone of your own mechanical skill and manufacture. Crude and defective they may be; but let us remember the sculptors story, whose work was regarded as ill fit for its place until lifted to the lofty summit, where cloud capped the unpolished edges were lost, and the beholder only saw the symmetry and polish of the genius. Thus will you add to Nature's bountiful gifts and by your energy and skill show to the civilized world that whilst you have found a State you have left to those who follow, an independent and self reliant empire.

GRAND PRIZES IN HORTICULTURE.

1. The Virginia Pomological and Horticultural Society offer One Hundred and Fifty Dollars.

2. Ellwanger & Barry, of Rochester, New York, offer Fifty Dollars for the largest and best collection of Apples, not less than fifty varieties, three specimens of each.

3. Marshall P. Wilder, of Boston, Mass., offers Fifty Dollars for the largest and best collection of Pears, not less than fifty varieties, three specimens each.

4. Charles Downing, of Newburgh, New York, offers Fifty Dollars for the largest and best collection of American Grapes, not less than twenty varieties, three bunches each.

5. Thomas P James, of Philadelphia, Pa., offers Thirty Dollars for the largest and best collection of Peaches, not less than ten varieties, of six specimens each.

6. Gen'l R. L. Page, Norfolk, Va., offers Ten Dollars or a Medal for best half bushel of the Flowers Grape.

7. G. F. B. Leighton, Norfolk, Va., offers Twenty Dollars or a Medal, at the disposition of the American Pomolog cal Society.

8. C. D. Barbot, Norfolk, Va., offers Twenty Dollars or a Medal for the best dozen bottles of Scuppernong Wine.

9. L. Barkley, Norfolk, Va., offers Ten Dollars or a Medal for the best dozen bottles of the Flowers Grape Wine.

10. W. H. C. Lovett, Norfolk, Va., offers Ten Dollars or a Medal for best Dried Figs,—cured within the territory of the Society.

11. Hon. Jno. B. Whitehead, Norfolk, Va., offers Twenty Dollars or a Medal for best half bushel of Scuppernong Grapes.

12. W. S. Butt, Norfolk, Va., Two Premiums of Five Dollars each or Medals, one for the best *Figs*; the other at the disposal of the Society.

NATIONAL FAIR.

THE AMERICAN POMOLOGICAL SOCIETY will hold their Fair this year at Richmond, Virginia, commencing September, 7th, and continuing three days. Exhibition open to the Nation. (See Circular in our columns.

Hon. M. P. Wilder, President, P. Barry, Esq., Chairman Fruit Committee.

TATE FAIRS.

THE STATE AGRICULTURAL SOCIETY FAIR AT SACRAMENTO,

Commencing Sept. 18th, and continue six days

O. F. Reed, President, Maj. Beck, Secretary, T. N. Hoag, Assistant Sec'y.

NEW YORK STATE AGRICULTURAL SOCIETY Fair at Albany,

Commencing Oct. 2d, and continues five days.

THE OHIO STATE FAIR WILL BE HELD AT SPRINGFIELD, CLARK CO.,

Sept. 25th to the 29th inclusive.

Wm. Lang, Esq., of Tiffin, President.
John H. Kleppart, of Columbus, Secretary.

THE GEORGIA STATE FAIR WILL BE HELD AT OGLETHORPE PARK, ATLANTA, GA.,

October 16th to 20th, inclusive.

Gen. John B. Gordon, President,
Gen. A. Echols, Secretary.

THE GEORGIA STATE HORTICULTURAL FAIR WILL BE HELD AT ROME,

Commencing Oct. 16th, and continues four days.

A. A. Jones, Pres. B. F. Jones, Sec.

NEW JERSEY STATE AGRICULTURAL SOCIETY, Fair at Waverly Station, (near Newark).

Commencing Sept. 19th, and continues four days.

IOWA STATE AGRICULTURAL SOCIETY, Fair at Cedar Rapids

Commencing Sept. 11th, and continues five days.

KANSAS STATE AGRICULTURAL SOCIETY, Fair at Topeka,

Commencing Sept. 11th, and continues five days.

COLORADO AGRICULTURAL ANNUAL FAIR. Fair at Denver City,

Commencing Sept. 12th, and continues five days.

H. B. Brace, Pres., F. A. Clifton, Sec.

MECHANICS' INSTITUTE SAN FRANCISCO. The Annual Fair of this Institution will open in this city August the 8th, and continues for four weeks.

EIGHTH

INDUSTRIAL EXHIBITION

OF THE

MECHANICS' INSTITUTE

WILL BE OPEN TO THE PUBLIC

AT 11 A. M. TUESDAY, AUGUST 8, 1871,

With the usual Ceremonies.

HON. MILTON S. LATHAN

Has consented to deliver the OPENING ADDRESS.

The EXHIBITION BUILDING is situated on

UNION SQUARE,

in the heart of the City of San Francisco, and on the line of three street railroads, the building covers a ground area of 87,200 feet, and is complete in all its appointments.

Steam power and water supply furnished free to exhibitors.

All goods competing for premiums, or to be catalogued, must be receipted for by the Entry Clerk before AUGUST 15th.

Rules and Regulations can be obtained from any of the officers at the Institute or Pavilion.

In conjunction with the Industrial Exhibition, the BAY DISTRICT HORTICULTURAL SOCIETY will hold its first Exhibition of the Fruits and Flowers of California occupying a space of 320x30 feet.

Prices of Admission.

Season Ticket admitting gentleman and one lady	$5 00
Season Ticket admitting one person	3 00
Season Ticket admitting juvenile under 14 years	1 50

☞ *The above Tickets are not Transferable.* ☜

Single admission	50 cents
Children under 14 years	25 cents

Children must be in charge of guardians or parents.

Tickets can be obtained from any of the Managers, at the Mechanics' Institute, 27 Post street, at the Pavillion, Union Square, or from the Principal Music or Drug Stores in the city.

☞ No bills will be paid unless ordered by the proper Committees. By order, A. S. HALLIDIE, President.
W. H. WILLIAMS, Secretary. 36.4

Valuable Farm for Sale.

One of the best Farms, located in the beautiful Valley of Sonoma, containing *One Thousand Acres* of rich Land suitable for an

ORCHARD, VINEYARD AND A DAIRY FARM.

The whole farm is well fenced, 300 acres choice land for Grain and fine cultivation, abundant streams of water on the place and one *Warm Spring*.

A Good House of eight rooms, good Stable, good Sheds, plenty of Wood on the place, large Trees, Plows, Harrows, and Small Tools. Three Mares, two Colts, two Cows, four Calves, and

SIX HUNDRED HEAD OF CHOICE MERINO SHEEP.

Title—UNITED STATES PATENT.

The whole will be sold together.

Terms easy to a Good Purchaser.

For further Particulars inquire of

Importers and Wholesale Dealers in

HARDWARE

AND

Agricultural Implements,

108 & 110 Front street and

12 & 14 Pine street,

San Francisco.

We are now receiving in addition to our Large Stock of Hardware and Agricultural Implements, a full and complete assortment of Plows, Harrows, Cultivators, Seed Sowers, &c., &c., suitable for the coming Season:

THE "DEERE" GENUINE MOLINE PLOW, all sizes from 7 to 18 inches.

"COLLINS" or "SMITH'S" Patent Cast Cast Steel PLOWS from 7 to 20 inches.

BOSTON CLIPPER PLOWS, all sizes,

PEORIA PREMIUM PLOWS, all sizes,

CAST IRON PLOWS, all sizes,

CAST IRON SIDE HILL PLOWS,

"MILLERS" PATENT CAST-STEEL SIDE HILL PLOW, it has no equal, all sizes,

SHOVEL PLOWS, Single and Double,

COTTON SWEEPS,

SUBSOIL PLOWS all sizes, with and without Draft Rod.

THE CELEBRATED "EUREKA" GANG PLOW with Steel Plows and Smith's Cast Steel Plows, 10, 12, and 14 inches.

"HILL & KNAUGH'S" GANG PLOW, the most popular Plow in the market, will plow any depth, 10, 12, and 14 inches.

"HILL & KNAUGH'S" SINGLE PLOW, for Deep Plowing, all sizes.

CULTIVATORS, 5, 7, and 9 Teeth Reversable.

" 7, 9, 11, 13 Teeth Gang with Patent Lever and Castor Wheel.

"KNOX'S" PATENT REVERSABLE AND EXPANDING HORSE HOES.

"HOWE'S" PATENT REVERSABLE AND EXPANDING HORSE HOES.

"BUCKEYE" GRAIN DRILL, 9, 10, and 12 Hole, Every Farmer should have one of these Drills

"EMERY" SEED SOWERS, for Sowing Small Seeds, Hand and Horse Power.

CAHOONS BROADCAST SEED SOWER, Hand and Horse Power, with Patent Lever for sowing in and out of Gear.

HARROWS, all sizes from 24 Teeth to 120 Teeth, Iron or Steel Teeth.

THE CELEBRATED ROTARY HARROW, every Farmer should examine this Harrow.

"NISHWITZ" PULVERIZING HARROW.

"BURDICK'S" NATIONAL HAY CUTTER, all sizes.

SELF SHARPENING HAY CUTTERS.

RAW HIDE HAY CUTTERS.

LEVER HAY OR STALK CUTTERS

HAND OR HORSE GRAIN MILLS.

BURR MILL BARLEY CRACKERS, all sizes from 16 to 30 inches.

The Celebrated Farm Mill for Cracking Barley.

Corn Shellers all Sizes and all Styles.

We are also Agents for the following well known Implements:

Buckeye Mower and Reaper,

Haines' Latest Improved Header,

Sweepstake Separator,

Buckeye Grain Drill,

Hollingsworth Horse Rakes,

Burdick's National Feed Cutter,

Deere's Moline Plows, &c., &c.

THE

HOWE SEWING MACHINE CO'S

Sewing Machines

Have become celebrated the world over. The work done by these Machines is unsurpassed, sewing the thinnest muslins and the heaviest goods with equal facility, and requiring no extra adjusting for uneven thickness or passing over seams.

THE ATTACHMENTS

For Hemming, Felling, Braiding, Cording, Quilting, Tucking, Binding, and Gathering,

Are of the Latest Improved Patterns, and are superior to those used on any other machine.

THE HOWE MACHINES

Are the Strongest and Simplest, and seldom or never give any trouble in operating.

The Howe Sewing Machines

Are the oldest established in the world (Mr. Howe being the original inventor) and are in advance of all others in improvements and protection of mechanism. They have invariably won the highest honors at the great exhibitions of the world, and are universally acknowledged to be the best in use.

A CARD.

TO EASTERN ADVERTISERS.

We feel it our special duty to notify our Advertisers in all the Eastern States; that if they desire to reap the *Full Benefit* of their advertising that

NOW IS THE TIME TO BEGIN.

It is all important to Californians who desire to *Import from the Eastern States* their

Trees, Seeds, Implements or Merchandise,

that they should know where to find them *month* before they are to be used, so they can by a Correspondence with the parties know *who can satisfy them them to the best advantage.*

Those Dealers in any articles they desire to introduce into the Pacific Coast, should by all means begin early. Soon our season of PUBLIC FAIRS commence, and this is a time when our Journal is scattered widely, and thousands sent out in the Cause of the Fairs and to promote our Industry, and all these will advantage ADVERTISERS.

The advertiser that begins early is the one that takes the lead in the business, and now is the most auspicious for CALIFORNIA will Import everything that is

NEW AND DESIRABLE

cost what it will, and those Business men who are up and doing, *Manufacturers* of Implements for Farmers, Sellers of Live Stock, Seeds, Plants, Trees, Garden Tools, Agricultural Books, &c., &c., should now be ready to send out their messages and let our people know what they have to sell:

The CALIFORNIA FARMER now enters upon its

THIRTY-SIXTH VOLUME,

and can give to all a BETTER CHANCE for PURCHASERS than any other medium, as we go *directly to those* who would purchase.

New Yorkers can send their advertisements to our Advertising Agents, G. P. Rowell & Co., others directly to us. See Terms in our Columns.

Address WARREN & CO.,
320 Clay st., San Francisco.

Home Miscellany.

THE HUSBAND TO HIS WIFE, ON HER BIRTH-DAY.

BY JOHN INMAN.

Nay ask me not, my dearest! why silent I remain—
Not often will my feelings speak in smooth and measured strain.
The joy that fills my heart, in the love I bear to thee,
Too deeply in that heart is shrined, by words expressed to be;
And thousand thoughts of tenderness, that in my bosom throng,
Are all too bright and blessed to be manacled in song.
This is thy birth-day, dearest—the fairest of the year—
To many giving gladness, but to me of all most dear;
The birth-day of my happiness, which springs to life with thee,
As hope springs in the captive's breast with the hour that sets him free.
I hail its happy dawning, with a love like that which [illegible]
My heart for thee, my pure one, when thy kind voice in it thrills.
I bless it and its memories, and the blessing which I [illegible],
Is fervent as the dying man's to him who bids him live
But the joy I have in thee, dear love, speaks not in echoes loud,
Nor will its tranquil flowing be revealed before a crowd.

NEWSPAPER MORALITY.

It is a great mistake to suppose that newspapers can not deal with certain universal vices because to speak of them is to advertise them and really multiply vice. It is in this, as elsewhere a question of method. A preacher may so set forth Christianity as to disgust every hearer, and repel those whom another shall persuade, as the south wind persuades in spring. There is no difficulty, however apparently unmanageable, that a newspaper may not deal with successfully if it deals skillfully. But the timidly and the prurience sometimes observable in the press, are due mainly to the public itself—to the reader. If the debasing influence of French fiction is sometimes seen in the English novel, it is because the results of that influence are found to be acceptable to the reader. The excuse of a single reader—of that one for instance, who is at this moment reading these lines—is that one man does not count; that his influence is nothing. And it is remarkable that an age which preaches so loudly the gospel of individual action, which asserts the very unit of society to be individual, should be the time also, in which every man is so likely to depreciate his individual influence and weight, and so apt to forbear the attempt to exercise it.

It would be curious to trace in this country, which is politically organized upon the declaration of equal individual right, the reasons of this want of confidence in individual influence, and the lack of a deep sense of individual responsibility. Much, of course, is to be attributed to the universal deference to the majority. As De Quincy says, a man who indulges himself in murder will presently come to Sabbath-breaking and procrastination; so those who defer to the majority in all great public concerns will find themselves yielding to it in private duties. The tendency of a popular system is to force a man to regard himself as one drop only in the flood of the majority. He forgets that the flood is only an aggregate of drops. So he does not feel that the public is but the private multiplied. He reads an offensive paper, he sees a mean action—"The public likes it!" he says, with a shrug and a sigh. Who likes it? Does he like it? Does his neighbor like it? Why do they not bring their influence to bear? What he says is only an excuse for his cowardice.

If the public—if any number of persons—wish the press to grapple with great evils, to expose evil-doers of every kind, and not only to rebuke vice in the slums, but dishonesty and corruption in high positions, it must sturdily sustain it, while it holds it to the strictest responsibility. It was Cain who asked, "Am I my brother's keeper?" and there are many and many who still excuse themselves under the same plea. While, therefore, the honorable editor, whatever he may do, does not make his paper—as he ought not to make it—a mere dead wall upon which every quack and criminal may paste his placard at pleasure, but aims to make the honest, not the dishonest, convenience of the public his private profit, the individual reader has the same interest with the editor in the general well-being. He must do his par. It is not, indeed, entirely true, either, that the press makes the public, or the public the press But there is an immense reciprocal influence. And if the parent walking in the streets is shocked to see in the shop windows a certain kind illustrated paper, to whose debasement his children, even in passing, are exposed, it is not enough for him to protest that the public delights in filth; for some terrible Nathan will say to every such David "Have you done, and are you doing, what you can, as an individual, to correct the taste which demands those pictures?—or do you idly think that one man can do nothing?" "Every man who does a great work, believes, as every effective reformer always believed, that one, with God, is a majority.—*Harper's Magazine.*

"There would be no evil speakers if there were no evil hearers. It is in scandal as in robbery—the receiver is as bad as the thief."

UNHEALTHY FOOD.

[We take the following excellent article from a valuable little Book (American Womanhood), published by Dr. James C. Jackson, the Physician and Principal of the "Home on the Hillside" at Dansville, N. Y. Whatever emanates from Dr. Jackson will always be found of a high order of excellence, and based on truth and scientific knowledge.—ED. F.]

With us, as a people, bread and meat constitute the staff of our life, being eminently the staples of our food. Of the grain used, wheat ranks all the other grains in quantity used, as it does all of them in natural fitness. According to Liebig, Bousingault, and other chemists, 107 parts of wheat are equal to 111 parts of rye, 117 of oats, 130 of barley, 138 of Indian corn, 177 of rice, 894 of potatoes and 1,335 of turnips. In making bread out of wheat after the form or manner which with us is almost universal, certainly quite common, we greatly deteriorate it, insomuch as to make it less nutritious than it might be; but not only so, we make it noxious, thus disturbing those who eat it in many instances, by causing severe irritation of their gastric nerves. In preparing wheat for cooking, the uniform practice is to separate the bran from the flour. When this is done an analysis of these will show the harm of bolting. The principal solid constituents of the human body are fat, bone and muscle. I offer the following condensation of facts taken from a statement of a scientific gentleman, correspondent of one of the ablest and oldest papers in the State of New York.*

1. *The Fat.*—Of this ingredient, 1000 lbs. of whole grain contribute 38 lbs.; fine flour 20 lbs.; bran, 60 lbs.

So that the bran is much richer in furnishing the materials of fat than the interior portion of the grain, and the whole grain ground together is richer than the finer part of the flour; in proportion to nearly one-half.

2. *The Muscular Matter.*—One thousand pounds of whole grain, and of the fine flour, contain of muscular matter respectively—whole grain, 166 lbs.; fine flour 130 lbs.

So that of the material out of which the animal muscle is to be formed, the whole-meal or wheat contains one-fifth more than the finest flour. For maintaining muscular strength, therefore, it must be more valuable in an equal proportion.

3. *Bone material and Saline Matter.*—One thousand pounds of bran, whole-meal and fine flour contain respectively—bran, 700 lbs.; whole-meal 170 lbs.; fine flour, 69 lbs.

So that in regard to that important part of our food, necessary to all living animals, but especially to the young during their growth, the whole meal is three times more nourishing than the fine flour.

Taking the three essential elements of a nutritive food thus existing in wheat, and comparing their respective amounts in the whole-meal and in the fine flour, we find that, on the whole, the former is one-half more valuable for fulfilling all the purposes of nutrition than the fine flour. "It will not be denied," says Professor Johnson, "that it is for a wise purpose that the Deity has so intimately associated in the grain the several substances which are necessarily for the complete nutrition of animal bodies. The above considerations show how unwise we are in attempting to undo this natural collocation of materials. To please the eye and the palate, to sift out a less generally nutritive food; and to make up for what we have removed, experience teaches us, to have recourse to animal food of various descriptions. It is interesting to remark, even in apparently things, how all nature is full of compensating processes. We give our servants household bread, while we live on the finest of the wheat which pleases ourselves. The mistress eats that the eye more—the maid, what sustains and nourishes the body better."

It has been found, by Majendie and others, that animals died in a few weeks when fed only upon fine flour, but lived long upon whole bread. Thus, the coarse bread given to prisoners is the best they could have; for, being restricted from all other food, there would not be sufficient nutriment in fine white loaves to sustain life for any length of time. The nutritive properties of bran are exhibited in its effects to fattening pigs and other animals; and thus, this apparently woody and useless material is found to produce valuable results.

In eating starch, or fine flour bread in so large quantities as they do, American women construct defective bones, a worse thing than which, organically regarded, is would be difficult for them to do. In the formation of a model body, nature always pays close attention to the construction of bones. They are to the other parts what a hull is to a vessel complete. Masts, sails, rigging are little worth when the frame or body of a ship is defective in build. So with the human body. No woman, however full and round in muscle and smooth in outline, can have hardiness of body if she has brittle bones. They indicate lack of endurance. If understrain they break easily, whatever may be urged to the contrary, she, under heavy taxation, breaks down easily. Life's trials wreck her. Strong bones cannot be made out of *starch;* and superfine flour has more of this than of any other substance in it. Starch, when introduced into the stomach and from thence onward into the intestines, readily is converted into sugar, and thus serves an excellent purpose as heat-forming food; but sugar does not make bone, nor does starch nor sugar make muscle or sinew, or nerve. White, leavened, wheat bread never should be eaten as a staple food, Because it is, it can readily be discerned why so many cases of deformed bony structure exist. Of any number of American girls over sixteen, and of American women over thirty years of age, a large percentage will be found to have the right shoulder lower than the left when measured with exactness; and whenever this is the case the ankle of the left leg will be found to be crooked. In not a few families this has come to be a transmitted deformity, the mother carrying it over to their children.

Of meats, it may be said, that they are eaten by American women far too freely. Were those who make use of them persons of lymphatic temperament, the ill effects would be less observable; or being of the temperaments which for the most part American women show, if they lived out of doors more, and have plenty of exercise in the sunshine and pure air, there would less injury accrue to their health and their organic forces than now takes place. As it is, the animal food eaten by them does not make muscle in large amount, nor does it construct nerve in great measure; but it does make a quality of blood which excites the brain, heart, and lungs, increasing their activity, and thereby developing a large measure of power. If food has what some physiologists call "potential energy," assuming that flesh-meats have this quality in them, they are not good food for American women who used by them as *staples*, because the conditions of living which are ordinary with them do not require this sort of energy. Situated as they are "from cradle to cross, and from footstool to throne," they have already too much innervation. They are always on the alert. They eat quickly, talk rapidly, walk to fast, read too much, sleep too little, pass girlhood too soon, and become old too early. A great many of them are constitutionally infecund, or, if not absolutely so, are only feebly procreative. They do not need stimulation, but do need sedation. Their vital energy ought not to be aroused and made to take on extraordinary vigor; but, instead, it should be quieted and kept below its ordinary level. Otherwise, in some shape, structural departure from the true order of bodily growth will show itself.

* *Country Gentleman*, Albany, N. Y., Luther, Tucker & Co.

PUT FLOWERS ON YOUR TABLE.

Set flowers on your table—a whole nosegay if you can get it, or but two or three, or a single flower, a rose, a pink, may even a daisy. Bring a few daisies and buttercups from your last field work, and keep them alive in a little water; aye, preserve but a bunch of clover, or a handful of flowering grass, one of the most elegant as well of nature's productions, and you have something on your table that reminds you of God's creation, and gives you a link with the poets and sages that have done it most honor. Put but a rose, or a lily, or a violet on your table, and you and Lord Bacon have a custom in common: for that great and wise man was in the habit of having flowers in season set upon his table morning, we believe, noon and night—that is to say, at all his meals, for dinner in his time was taken at noon; and why should he not have flowers at all his meals, seeing that they were growing all day. Now, here is a fashion that shall last you forever, if you please, never changing with silks, and velvets and silver forks, nor dependent upon caprice, or some fine gentleman or lady who have nothing but caprice and changes to give them importance and a sensation. Flowers on the morning table are especially suitable to the time. They look like the happy wakening of the creation; they bring the perfumes of the breath of nature into your room; they seem the representative and embodiment of the very smiles of your home, the graces of its good-morrow; proofs that some intellectual beauties are in ourselves, or those about us. Some Aurora (if we are so lucky as to have such a companion), helping to strew our life with sweets, or in ourselves some masculine wilderness not unworthy to possess such a companion or unlikely to gain her. LEIGH HUNT.

MRS. STANTON ABOUT MEN.

Mrs. Stanton in one of her Letters from Iowa to the *Revolution*, thus cuts up the men folks. If she thus strikes before Suffrage is allowed, what will become of the men afterwards?

Mrs. Stanton says:

"In my travels I occasionally meet men who think that the chief glory of all women is to bear children. One of these conceited lords told, me a few days since that his wife had fourteen children, and asked me if I did not think that was the highest right woman could desire. Looking, at his little head, contracted chest and crooked legs, I replied, 'That turns somewhat on the character and capacity of the *father*. I must confess, sir, I never saw a dozen men worth repeating fourteen times.' The poor man, reviewing his own defects, looked as if he thought his own wife might have blundered in not preferring enfranchisement to the multiplying so many shadows of himself. "It is better," says John Stuart Mill, 'to give the world one Hon than twelve jackasses.'"

[We have a very interesting addenda of news for Mrs. Stanton: we read that the wife of Mr. John Bibb, of Louisa County, Va., has presented him with *seven children* in three years. Year before last with twins, last year triplets, and this year twins again.

What says Mrs. Stanton to this? Shall not our U. S. Government award her a National token? Here is a good wife worthy of note:—ED. F.]

COOL TEARS.

An attendant at Mount Vernon, not long since, found a lady weeping most bitterly and audibly with her handkerchief at her eyes. He stepped up to her and said, "Are you in any trouble, madam?" 'No, sir," she sobbed, "I saw you weeping." "Ah!" said she, "how can any one help weeping at the grave of the Father of his Country?" "Oh, indeed, madam," said he, "that's it! The tomb is over yonder, this is the ice-house."

A New York letter says there are one thousand families in that city who each spend $30,000 a year.

[But we would ask how many families are there in New York that have *no bread* and are starving. ED. F.]

TOBACCO HABIT IN OUR SCHOOLS.

We present the following very remarkable and alarming document emanating from one of the prominent Teachers of our Public Schools, and it is to be hoped that immediate action will be had and measures adopted to check the growing evil.

The use of Tobacco has become the Great sin of the Pacific Coast, and the cost of it when stated in full would startle every well wisher of the State. The evil is increasing all over the world.

We clip the following item from abroad, showing this evil in England:

"The English Anti-Tobacco Society, at its late thinly-attended eighteenth annual meeting, adopted a resolution to the effect that there was reason to be anxious for posterity in the extent to which smoking was practiced by the youth and young men of England."

We herewith give a Letter of the Teacher addressed to our City authorities, and trust it will awaken deep reflection to this subject:

To the Honorable, the Board of Education—GENTLEMEN:—I consider it my duty to call your attention to a great and growing evil which has fastened itself upon the boys of this city, and with which the teachers cannot cope without authority higher than their own. The ratio of boys between seven and sixteen years of age who smoke tobacco to the whole numbers ages is fearful, and the practice is increasing at a rate that is as alarming as it is disgraceful. The primary cause of this deplorable state of affairs is the introduction of the paper cigar or *cigarito*. So long as a cigar costs ten cents or even five, comparatively few boys, and no very young ones, will be willing to invest their pocket money in tobacco, but now that five cents will pay for a whole package of fifty paper cigars, any little boy may exhibit his generosity by distributing these little paperfulls of debasement to a dozen or more of his companions. Under section 13, page 26, of the former manual I held that any boy who was known to smoke tobacco even at home or elsewhere, after school hours or on Saturdays, Sundays or vacations, was not fit to be a member of any public school. In several instances, boys whose clothes and breath constantly smelled of tobacco came very near appealing from my decision; insisting upon it that I had no such legal jurisdiction over them. The section referred to says, that a boy is liable to suspension, if his conduct in or out of school is considered such that he is an unfit member of it. The new manual contains no such provision for coercing into decent abstinence boys whose parents allow them to smoke.

I have systematically watched for smoking boys, before and after school hours, but the only effect of such vigilance was to widen the circle of cleanliness around the school house. The smokers stopped to indulge nearer home and further from the school. Boys under eight years of age, belonging to private schools and not going to school at all, have frequently passed the Lincoln school in the morning coolly and independently smoking cigaritos, while boys were entering school. To passing citizens they present the appearance of little boys entering school with cigars in their mouths.

I am well convinced that we have retarded the increase of this detestable habit, but I am equally certain that this increase is nevertheless constant and rapid.

I therefore request your honorable body to re enact Sec. 13, modified with special reference to the use of tobacco by school children, and to consider the practicability of securing the co-operation of the Board of Supervisors in ordering the arrest by the police of all boys under a specified age, who may be found smoking in the street.

Respectfully,
BERNHARD MARK,
Principal of Lincoln School.

At a recent school examination a young urchin being asked why it was so warm in the torrid zone replied, promptly, "Because it is so hot."

THE BURDETT

CASES NEAT and DURABLE.

INTERIOR WORK Unequalled.

ORGAN.

What they are thought of by the leading organists of the Pacific Coast:

"Superior to any instrument of their kind."
Mr. GEO. T. EVANS, the well known Composer, and Organist of the Church of the Advent, S. F.

"Recommend the Burdett for superiority of tone, delicacy and power, and in every respect far ahead of all other reed instruments."
Mr. S. D. MAYER, Organist of St. Johns Church, Oakland, Cal.

"After trying the Burdett, I take great pleasure in adding my voice to the many already sounding their praise."
Mr. H. M. BOSWORTH, Organist of Calvary Church, S. F.

"Far ahead of all I have ever heard or tried."
J. W. C. RHIND, Organist of Howard Street M E Church, S. F.

"Examining the "Burdett Organs" I was greatly and agreeably surprised at finding such variety, delicacy and power."
R. J. McCABE, Organist St. Francis Church, S. F.

"Consider the Burdett the finest of reed organs."
CHAS. H. HOFFMAN, Organist of the Mason Street Synagogue.

"The most effective reed instrument for Church, School or Parlor."
J. MULLER, Organist St. Ignatius Church, S. F.

"A decided novelty and great improvement on the many styles now in use."
GEO. SCHUCKE, Organist of the Methodist Church, San Jose.

"Surpassed my expectations of a reed instrument and, comprises everything needed from the solemn music of the church to the popular music of the day."
EVERETT POMEROY, Organist of the Presbyterian Church, San Jose.

"They excel anything of the kind I have ever seen before."
Mr. JAS. R. LAWRIE, Santa Clara

"Their volume and purity of sound is far superior to any reed instrument I have ever seen, and combinations most perfect."
D. H. BERLIN, Professor of Music, Stockton.

"The combinations, power and delicacy in all sizes are surprising, and I cheerfully recommend the Burdett.
W. CARMICHAEL, Organist of St. Marys Church, Stockton

☞ Our descriptive price list now ready. Schools, Churches, Lodges, etc., will be dealt liberally with, and accommodation extended to responsible buyers. Address GRAY'S MUSIC STORE, Agency for the Pacific Coast, 628 and 625 Clay Street, San Francisco.

MILLS' SEMINARY.

REV. C. T. MILLS AND WIFE, FOR THE PAST six years Principles of the Young Ladies' Seminary at BENICIA, are happy to announce to their patrons and friends that the next term of their well-known Institution will open

Wednesday, Aug. 2d,

In their NEW, COMMODIOUS AND BEAUTIFUL BUILDING just completed at

SEMINARY PARK, BROOKLYN.

As most of the able and experienced corps of teachers, with valuable accessions, as well as the fine classes of pupils now pursuing their studies, remove with them, the school remains essentially unchanged.

With greatly increased facilities for physical comfort and intellectual culture, and without additional expense, Mr. and Mrs. Mills believe they can accomplish much more for their pupils in the future, than they have been able to do in the past, and that their Institution offers unrivalled advantages for a thorough and finished education.

All communications relating to admission, and all letters of inquiry, should be addressed to

REV. C. T. MILLS, D. D.,
35.23 Brooklyn, Alameda county, California.

Santa Clara College, S. J.

SANTA CLARA, CAL.

Conducted by the fathers of the Society of Jesus

THE TWENTY-FIRST ANNUAL SESSION OF THIS Institution will commence on MONDAY, August 7th 1871

TERMS—Tuition in the Classical and Scientific Departments; Boarding and Lodging; Washing and Mending of articles; Schoo Stationery; Medical Attendance and Medicines; Fuel, Light, Baths, etc., per session of Ten Months,.....$350

Purchasers of Bees can have all information on this subject by applying at the FARMER OFFICE Terms liberal.

Miscellany.

TABLE MANNERS

When to eat, and what, and how much, are questions which has been abundantly answered, well and ill; but it is not considered as it ought to be, that the attendants of the family table have a much larger share in promoting a healthful digestion than is generally supposed.

A good appetite is essential to a good digestion but a snow-white table-cloth is a great promotive of a good appetite. No one can eat in comfort if any member of the family appears at the table in slatternly dress with unkempt hair, showing a breadth of black under the finger nails, with a hawking, and a spitting, and a blowing of the nose, and their tremendous associations.

But a spotless, napkin, the most splendid roast, and faultless concomitants all, what do these amount to, if sadness is written on the face of the wife; if an angry scowl gleams from the corrugated brow of a morose husband, or a dissatisfied look comes from a child's eye, and the meal is partaken of in ominous silence? Away with unloveliness! there is no sunshine in such a household, and the members of that family, if they grow up at all, will become the refrigerators and the bane of every company into which they may be thrown in after life.

A SMART BOY

"When I was a boy," said Uncle Morton, "things went on more economical than now. We all worked. My work was to take care o' the hens and chickings, and I'll tell yer how I raised 'em. You know I'a a very thinkin' child, allus a thinkin' except when I'a asleep. Well-it came to me one night to raise a big lot o' chickings from one hen, and I'll tell you how I did it. I took an ole whisky-barrel and filled it up with fresh eggs, and then put it on the south side of the barn, with some horse manure around it, and then set the old hen on the bung-hole. The old critter kept her settin', and in three weeks I hears a little 'peep.' Then I put my ear to the spigot, when the peeping growed like a swarm of bees. I didn't say anything to the folks about the hatchin,' for they'd all told me I was a fool; but the next mornin' I knocked the head out of the barrel, and covered the barn floor, two deep, all over with little chickings. You may laugh as much as you please but it's true.

A Nice Way for Stuffing the Ballot Box

The Yarmouth (Mass.) town-house has been closed since the last annual town meeting. On opening it the other day it was found that a squirrel and her five young ones had taken possession of the ballot-box. The mother had made a nice nest among the ballots cast for selectmen and other town officers. The nest and young were removed, but when the town meeting has dissolved, *the nest and young squirrels were restored to the position of the ballot-box, and the town-house locked up.*

A Host to Provide For

Messrs. John Taylor & Sons, of England, a very distinguished firm and largely engaged in mining, having large interest in every part of the world almost, have on their "Pay Roll" over *Fifty-six Thousand Men* in Great Britain alone. Would not the total sum of the weekly wages be a nice fortune?

A Nice Fortune

"There is now in the office or recording of deeds in this county, a mortgage executed by the Philadelphia and Reading Railroad Company to the fidelity Insurance Trust and Safe Deposit Company, of Philadelphia, in the sum of *Twenty-Five Million Dollars*. The document has attached stamps amounting in the aggregate to $25,000."—*[Exchange.*

Anatomical Museum.

This most interesting and scientific Physiological Museum is being constantly enlarged in the number of its specimens in the "Science of Life" and is the results of a violated law of nature.

At this Museum will be seen and taught *Lessons* that can be learned nowhere else, and young men should visit the Museum and there learn where the Rocks and Quicksands exist where so many young men are wrecked.

We consider this Museum one of the most important institutions in our State.

Don't Want to Die.

It unfortunately happens that no man believes he is likely to die soon; so every one is much disposed to defer the consideration of what ought to be done on the supposition of such an emergency; and while nothing is so uncertain as human life, so nothing so certain as our assurance that we shall survive most of our neighbors.

TO THE APPRENTICES OF CALIFORNIA.

The Board of Managers of the Eighth Industrial Exhibition desiring to encourage and advance the interests of the Mechanical Apprentices, will, at the incoming Exhibition, award Special Prizes for the Best Specimens of Drawing, Designs, Models, or Mechanical Workmanship, and space will be allotted to this special Department.

The class, and value of premiums, to be awarded on the merit of the exhibit, by a Committee appointed by the Board of Managers.

Each exhibit must have attached the name, age and residence of exhibitor; and an application to exhibit in this Department must be accompanied with a voucher from the employer, that the exhibit is the sole work of the exhibitor.

Information will be furnished and applications for space may be made to J. H. Gilmore, Special Agent Eighth Industrial Exhibition, at the rooms of the Mechanics' Institute, 27 Post Street, San Francisco.

Valuable Stock Ranch

FOR SALE—A BARGAIN.

A Large and Valuable and well located Ranch of FOUR THOUSAND ACRES, all fine level land and well adapted to Wheat and Grain-growing or pasturage of Stock, here, even in this dry season the feed is good, and animals upon it are now doing well

There is now on the Ranch 3500 Sheep, four Horses, four Cows and Heifers, together with Wagons, Plows and every Farming Implement needed to carry on the Ranch.

The Ranch is situated 23 miles south of the New Town, recently located by the San Joaquin Valley R. R. Co., on Bear Creek, directly on the line of the Railroad. The work between said New town and Modesto is rapidly approaching completion and Cars will be running to Bear Creek in thirty da

There is upon the Ranch a Good House, Barn, Wells of Water, all fenced in. The Ranch, with all improvements, will be sold at a Very Great Bargain as the owner desires to change his location, having other business to attend to.

The Sheep will be leased on shares as agreed upon

The terms of Sale will be One-third Cash, balance one and two years, interest at 10 per cent. per annum

To any person who desires to engage in STOCK-RAISING or GENERAL FARMING, this is an opportunity rarely to be found. Early application will secure a great bargain, as the whole will be sold at the nominal value of unimproved lands.

A BARGAIN

Farm, Vineyard and Stock.

A VERY FINELY LOCATED FARM SIX MILES from Sacramento on the County Road leading to Marysville. A very fine Farm of 148 acres, good Grain and Grass land, having an excellent Grain crop this year, dry as it has been, also a good field of *Alfalfa Clover.*

The Farm contains a Vineyard of 8000 bearing Vines, 150 excellent Fruit Trees, best kinds, and a variety of small Fruits. Upon the Farm the best of Fences, good Barns, Granaries, two Windmills for water, Reapers, Plows and plenty of Tools to carry on the Farm.

The Stock consists of 8 good Horses, and 20 head of Dairy Stock old and young, all the Grain and Hay, Stock and Fowls will be sold with the Farm.

The House is a good common House, the whole will be sold together to a cash purchaser at a great bargain as the owner desires to attend to other business.

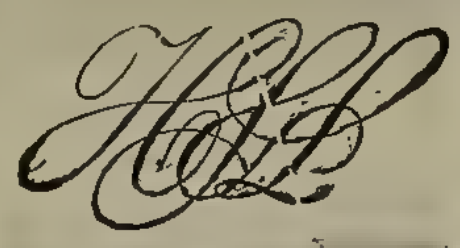
This is new seed and very sure to grow. To be had at the FARMER OFFICE,
220 Clay Street San Francisco.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE



This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

freed from the resinous or pitchy matter which attach es to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Gumb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by Enoch Farmer.

San Francisco, August 17th.

Money and Exchange Table

Exchange on England	110½x110¾
Price of Gold	112¼
Value of Greenbacks	90x91
Value of Wheat in Liverpool	11s. 6d.
do do New York	180x185 bush

Price of Money in Eastern Cities.

New York—Money very abundant and rates as low as 2x3 per cent. per annum on call, at 4x6 on time paper.

Boston—Money very plenty, 3x5 per cent on call, 5x6 on time.

Chicago—Money capital employed 4x6 per cent. on call, 6x8 on time.

Money in England.

Bank of England rates 2½x10s per cent, heavy supplies, money very easy in business circles.

Money in France.

Money in the form of Gold is now showing very abundant by the people among the lower classes offering Government all it wants to pay the Prussian Indemnity.

GRAIN AND FLOUR MARKET.

The Grain market show much activity and the amount coming now to market is very large, and with the increased demand for our Home Mills, and for several ships loading make a lively market.

The present influx of Grain to our market show what we have all along said that our harvest is much *larger* than was believed to be by the cry of "lost crops."

With the present life in the grain trade the price remains steady, and as the price is one penny better in Liverpool no change here, other than a better feeling for the future.

Barley and Oats are in better demand and the price of both has advanced, Corn is also in demand, other small grains dull.

Hay has risen and is in demand. Feed grain all the same as last week. Potatoes plenty, declining. Beans same as last report.

POULTRY AND GAME.

Richard D. Mowry,

The Poultry market shows well. Young Poultry is better, but our Poultry-sellers send in too many *mixed lots*, poor and good in one crate, this hurts general sales, they should be separated. We always find choice Poultry at Mowry's Stall, 103x104 California Market. We noticed a fine animal at Mowry's, a fat Deer of large size.

DAIRY—BUTTER, CHEESE, EGGS ETC.

The Dairy market has improved in price but not in quality. Too much common produce, quantities of Butter, Cheese and Eggs come from abroad.

Our Dairymen have a good field if they would only improve it, for California can make as good Butter and Cheese as any part of the world.

Cosmopolitan Hotel,

San Francisco,

CHANGE OF PROPRIETORSHIP.

H. H. PEARSON,

LATE OF THE RUSS HOUSE,

Having bought the interest of Messrs. Tubbs & Patten, of the Cosmopolitan Hotel, has secured a lease for a term of years of this well known and elegantly furnished Hotel. His previous reputation assures it being kept in first class style, while in order to keep pace with the times he intends to make important reductions in the scale of charges. His intention is to make it a family and business house, while his large connection with the traveling public warrants him in expecting a large amount of country, Pacific coast and Eastern patronage.

The prices will range from two to three dollars a day for ordinary accommodation Board by the week or month as per contract. The table will be kept on the most liberal scale and many improvements introduced. The spacious reading room is the finest of its kind in the city, while the furniture and fittings generally are superior to those of any hotel in San Francisco. The house will be thoroughly overhauled

Mr. PEARSON assumes proprietorship this day, August 1st. 36 6

PUBLISHER CALIFORNIA FARMER,

San Francisco, Cal.

Introductory Address of President A. S. Hallidie, Esq.

Ladies and Gentlemen: To-day we are to open the Industrial Exhibition, the eighth under the auspices of the Mechanics' Institute and on this Pacific shore. It is one of the events we should feel proud of—it is an epoch in the industrial interests of the State, and satisfactory because it is of progress. We should feel proud of it because it bears evidence of a higher civilization in the race and an increasing capacity for manufacturing and producing—suggesting that the time is not far distant when California will not only be able to sustain herself, but able also to supply other nations with the substantial results of her skill and manufacturing ability.

But for all that, we are moving on in an uncertain, tumble about manner; scarcely steadied down to the stubborn fact of life, which, in spite of our best efforts to suppress, will rise to the surface.

We can scarcely give up our careless extravagance, our 1½ per cent. our gold currency, this letting a man do as he pleases and making him if he don't, and all these traditional things which keep us in a bad way for the proprieties, and stir up the little feelings which have no business to exist between man and man.

It is better far that all concerned in the "mate rial industries" should understand themselves, and that shadows should not be mistaken for substance, or the mirage for the real thing. We would find that wrongs could easily be adjusted by a little patience, a little forbearance and some calm reasoning. Certainly it is essential for the welfare of the State that all should join in promoting the interest of the Mechanic Arts, in encouraging manufactures and industries of all kinds, that we may be able to sustain ourselves, and supply customers from abroad. To this end are these exhibitions which bring under one roof the products of the skill and labor of our people.

The awarding of premiums, I think should be incidental to, not an essential part of these exhibitions. The wares of an exhibitor are best judged by the people. The value of these exhibitions consists in showing the relative condition of our industries, in the concentration or bringing together of exhibitors and visitor under one roof for intercourse and commerce, and in the elevation of the people by the appreciation of the dignity of labor. Of course, there are other subsidiary benefits, but the condition of an industrial exhibition like this furnishes the key note to the scale of a nation's prosperity.

The people of San Francisco have always taken a deep interest in these Industrial Fairs, and their ever generous response to the laborers of the industrious classes, indicate the direction of their thoughts, and builds up our hopes in a bright future for the States.

California, as a State, is not behind her sisters in mechanical skill and inventive genius. Her children have a vigorous constitution, and in the developments of manhood, demonstrate through their experiences of necessity the necessity of experience. Knowing how hard are these lessons of experience, it is a pity they are usually so soon forgotten, and it would seem that we learn but little from the past. Indeed, a stray grain from a desert of everlasting self-producing sand, blown by a chance wind into the crevasse of Yosemite, seems of unmeasurable magnitude compared to the applied teachings of the past experience of mankind.

Looking around us, in this edifice filled with the suggestions of peace industry, with the products of man's ever restless brain, it would seem that "man's inhumanity to man" was forgotten in that higher hope of peace on earth and good will.

The gathering together of the industries of the people possess in itself suggestions of deep interest to us in California, which the distinguished citizen, who is about to deliver the opening address, I doubt not, will refer to.

California possesses the key to the trade of the Pacific, which nothing but blind stupidity can lose to her, and although her citizens have occasional mania of suicide, let us hope that the States' common sense will save her from such a fate. A broad, liberal and conciliations line of conduct, honesty of thought and action to all alike without distinction of color or race, are essential to our prosperity as a community or a people.

More nationality, more Americanism, that is what we want. Not citizens of America alone, but *American citizens*, in every sense of the word, first, last and all the time. Having the spirit and the will to elevate the Mechanic Arts, and to insist on the education of the people. Can you expect a true distinctive nationality, with its noble patriotism, its generous treatment of strangers, its comprehensive protection, as long as you have a demonstrative political sympathy with other nations, be they never so friendly, by bands of men organized, in many cases armed, and who are naturalized as citizens of America? I think not. And I do not believe there can be any half citizenship.

These exhibitions bring nations together on a common level. They show that skill, ingenuity, genius and invention exist everywhere and in a truly republican condition; and we note particularly at this Industrial Fair the products of those nations, which had walled themselves in by their ability to live within themselves and their mistrust of other countries, who having let down the bars of exclusiveness, are rising above misanthropy and traditions, and with the enterprise of a renewed youth absorb the spirit of progress and enter into the race of nations, with confidence in their future, and with the hope of sympathy from the people of America.

Providence retained California for the American people, because she believed in the American nation, and now with one foot on the shores of the Pacific ocean, holding with one hand on to the top of the Sierra Nevadas, stretching the other far out over the Pacific seas, with a perfect physical health, clear in intellect, full of the nervous magnetism of life, can we not, in the reliance of our own strength, take our position with moral courage as an advancing nation, ready and willing to extend courtesies, kindnesses and protection to those nations opening to us their commerce and extending their good will?

A nation of forty millions of people, the larger portion of whom are endeavoring, in good faith, to shake off the fetters and restrictions which contract its growth among nations, by the construction of railroads, of telegraph lines, the building of bridges, the modernizing of modes of agriculture by the introduction of agricultural machinery and various other material improvements, shows its appreciation of modern invention and ingenuity.

To such a Nation, the Mechanics' Institute of this city send greetings, asking it to come over here to this new State of ours—this California, twenty-one years of age—age of manhood—and see what we were doing—what we could do for it, and it for us, promising such as should visit our shores kindness and courtesy, and freedom to examine and inspect our industries, our manufactures and institutions of learning.

Accepting in good faith our invitation, the Japanese Government has commissioned several distinguished citizens to visit us, and they are among us to-day as guests of the Mechanics' Institute, which bespeaks for them your consideration and kindness in facilitating the objects of their mission by furnishing them opportunities to see and examine our industries and resources.

I need hardly refer to the exhibits from Japan—these will best speak for themselves—but to mention in this connection, that they were sent to this Exhibition on our representation.

As an evidence of the appreciation the Japanese people have for the United States, their young men are students in various colleges in this country. There is one school in Japan containing 1,200 pupils studying the English language, and the Commission before referred to is the first that has ever visited the United States or Europe on such a mission.

Towards this Exhibition contributions have been received from Australia, China, the Hawaiian Islands, and the adjacent Territories, and States, and I believe I may safely state that, in general display, newness of products and variety of exhibits, it surpasses any heretofore held on this coast.

Applications for space poured in, and exceeded by many thousand feet all we had to give, and in consequence many have been refused space on account of our inability to supply the room desired. Of course, exhibitors are behind. They always are at the beginning, but they come out ahead in the end. The bare tables and walls will be covered in a few days; the space has all been allotted—every foot of it—and if the present claimants do not occupy it without delay, it will be apportioned to anxious-waiting applicants. The managers meantime beg your patience and indulgence.

The present building covers an area of about 100,000 feet, exceeding by 20,000 feet the Exhibition of 1869. The managers have been untiring in their efforts to make it complete in all its details.

The Bay District Horticultural Society holds its first exhibition at the same time and during the same term as the Industrial Fair. This young society has shown a vast amount of enterprise, and is deserving the utmost success. I trust its membership may be largely increased, and it may engender a taste for horticulture among the people of the bay district.

There in one question which rises up before me every little while, and to which I beg to refer. It is: What shall we do for an exhibition building when this is torn down? This will be the third Industrial Fair held here; it seems consecrated to industry, and it pulls somewhat at the heart strings when I reflect that it must soon pass away. It has occured to me that there might be a sufficient number of public-spirited gentlemen in this city who, recognizing the value of the Industries and the Mechanics' Arts, would club together and erect a building of sufficient capacity near the heart of the city, and consecrate it to the Arts and Sciences.

The Mechanics' Institute has already expended about $130,000 in temporary structures, and this sum would go far towards erecting a nobler building of a permanent character.

Ten months since, the Mechanics' Institute offered various premiums, payable in cash, amounting to $3,300, for reports, essay and exhibits bearing directly on the material interests of California. To day the time for receiving these reports expires. I sincerely hope that there are many competitors, and that the whole amount of premiums, may be drawn, for in that case the people of California would be many fold the richer.

I have received an invitation from the American Institute for California to contribute towards the Industrial Exhibition to be held in New York City, opening September 7. In order to enable exhibitors from this Fair to take part in that exhibition, the time for receiving articles has been extended a sufficient length of time to enable them to reach New York after the close of this exhibition.

In conclusion, and on behalf of the Board of Trustees of the Mechanics' Institute, I beg to invite strangers and others to visit the reading-room and library of the society, on Post street, where they will be at all times welcome.

JOTTINGS.

There is to be a Convention of the Residents of Agricultural College Presidents and Professors in Chicago on the 20th inst., the object of which is to secure uniformity in the system of instruction and the highest amount of efficiency in their work. These gentlemen have resolved to become a Bureau of Experimental Farming, as well as a Board of Instruction, and that a great good will grow out of their co-operative efforts cannot be doubted. By this means results may be compared, and Canons of Culture established in place of the empirical and barbarous methods hitherto employed, as if to show how soon man can convert the fruitful, foodful lands into wastes and deserts.

A GOOD EXAMPLE.

It has required a good deal of pushing from the Practical men of Illinois to prevent the subordinating of the Industrial and Classical and Literary Instruction in their University. They have adopted in part a plan long urged by Friends of Agriculture, that is of holding Farmers' Institutes in different parts of the State. These meetings will continue from three to five days, according to the locality. The University Professors will give two lectures daily on practical subjects, and familiar conversation between the farmers will occupy the evenings. We wish such arrangements could be carried out in our own State, it would prove the beginning of Farmers' Clubs, which rightly conducted would prove beneficial to both farmer and the farmer's wife, intellectually and socially. Nothing is good which is done for self alone, this attempt to bring farmers and farmers' families together for mutual improvement is a good one, and we hope it may succeed.

J. C. C.

THE GRAPE CROP OF UTAH.

The Utah papers have said much about their crops, and their losses by the Grasshoppers, &c.

We have advices of late date of very fine Fruit crops, our information coming from personal friends who are just from Salt Lake and vicinity.

We have also news by the *Utah Pomologist* that reports as about the Grape crop especially, as follows:

"Although the season has been excessively hot, and an unusual drought; grapes look unusually well and promise a better crop than heretofore gathered.

Mildew has appeared only in a few instances with tender foreign varieties planted among orchard trees, and illy ventilated.

The Black Hamburg is more tender in this respect than any other grape we know.

The Isabella looks generally better than we have ever seen it before; foliage bright green and thrifty looking, fruit large, even and plenty.

The Old Mission, loaded with fruit, shows no symptoms of any trouble and looks well.

White Malaga and the Muscats and Frontignans generally well loaded with fruit and look fine and prosperous.

Early, white and other Chasselas grapes do not look as promising and free from objection as some varieties. We are of opinion that the renewal of wood system should be practiced with the Chasselas to make it an equal to other fine varieties generally, in size and evenness of berry and cluster.

The Syrian, and White Nice are both precocious and enormous bearers. The vineyards need rain very much now.

GOOD WORD FOR ENGLISH WALNUTS.

It is spoken by the editor of the *American Rural Home*, who advises each tree-fancier to plant at least a specimen or two. It will thrive in sheltered locations in Western New York and further south, needs a rich, deep soil. It is a native of Persia, and was brought to Europe about three hundred years ago, and thence to the middle portion of the Eastern States of this country, where it flourishes tolerably well. The tree grows large and handsome. The timber is valuable. It bears abundantly in most parts of England, requiring little attention. The nut has a good flavor when well matured; yet the same kind grown in Spain is quite superior, brighter, and of richer flavor. It partakes of the fine flavor of the shagbark hickory of the West (white walnut of the East); with other fine, delicate properties of its own.

[No nut tree is more certain in California than the English Walnut, and we are glad to know it is being extensively grown.—Ed. F.]

RAISING BODIES OF DROWNED PERSONS.

In the case of a recent accident drowning, in the Hackensack River, N. J., several persons made an attempt to recover the body, but without success. A French Canadian, named Busche, then undertook the job, and is reported to have proceeded in the following scientific manner:—Having supplied himself with some glass gallon-jars and a quantity of unslacked lime, he went in a boat to the place where the man was seen to go down. One of the jars was filled half full of lime, then filled up with water and tightly corked. It was then dropped into the water and soon after exploded at the bottom of the river with a loud report. After the third trial, each time in a different place, the body rose to the surface and was secured.

EARLY CUT HAY.

A Correspondent of the Willamette *Farmer*, Oregon, says:

"I noticed an article in your paper upon early cut hay, that suits my idea exactly. Having cut and fed out some twenty to twenty-five tons of hay a year for eleven years, I find that hay cut very green, and properly cured, not allowing the rain to fall upon it or the sun to bleach it, is worth fully double that which is cut too ripe—Green cut hay will shrink more in weight than riper cut, but if buyers understood the difference in value between green cut and properly cured hay, and that which is too ripe, they would pay so much more for the green that you would very soon see a different article in the market."

BEATRICE PEACH.

The *American Agriculturist* has received specimens of the Beatrice peach, a seedling raised by Thomas Rivers, of Sawbridgeworth, England. Like all early peaches it is small but of high color, very fragrant and of good quality for very early variety. Mr. Bilgen finds it at least twenty days earlier than Hale's Early and possessed of superior shipping qualities.

Make your business known widely if you wish to prosper. No business man can lead in his trade without a judicious use of and a liberal expenditure of means in advertising. This is fully proved by all large advertisers, who have payed the way to a Splendid Fortune by Advertising Liberally.

WALTAR BROWN & SON'S MONTHLY WOOL CIRCULAR.

New York, August, 1871.

At the opening of July the Wool Market only moderately supplied, but receipts soon became quite liberal, and dealers once more had well stocked lofts and were enabled to meet the active demand prevailing for all descriptions. Prices, which had hitherto been only nominal, became established, and notwithstanding the reluctance with which consumers at first met the advance, they finally accepted the situation as an accomplished fact, and have been free purchasers.

Many are of the opinion that there is room for a further advance in some grades, the supply of which is even now quite limited, and little or no prospects of being increased by foreign importations. As these grades, enter largely in the manufacture of goods extensively produced, the opinion is perhaps, well founded.

The large importations of fine Foreign Wools have found ready sale, and have been more generally used by manufacturers. When the working qualities of these Wools are better understood they will be more extensively employed in the fabrication of all fine Woolens.

Although importations have been large, and Wools have come forward so freely from the West, yet stocks in the markets are, only moderate, and of some grades are positively scarce.

Stocks of raw material in the hands of Manufacturers will probably not average more than sixty days supply, hence a good demand may be expected to continue; subject perhaps, to the influence on manufacturers of the sale of their productions.

There has been fair activity in Woolen Goods, and stocks of all descriptions in the hands of Commission Merchants are unusually small for the season, while the productions of several mills, running on popular styles are sold ahead.

The average advance in prices of Woolens, now nearly approximates to the rise in the raw material. Hence manufacturers, generally, are more willing to take hold, and holders of wool are strengthened in their valuations.

Altogether the tone of the market is quite healthy, and, while there may be a season of quiet, the ultimate result will, we think, fully equal the best expectations of the trade.

PULLED WOOLS.—Lambs and Shearlings are eagerly sought after, at extreme prices, and the supply is not abundant, even at current rates. Of Old Wools there are but one or two small lots offering.

CALIFORNIA WOOLS have been in active consumptive demand, and large transactions were made during the month, chiefly of desirable parcels. Inferior and burry Wools are comparatively neglected.

TEXAS WOOLS.—Sales have been large, receipts light, stock moderate, and prices firm.

FOREIGN WOOLS, throughout the month, were in active demand, and the quantity reported sold shows a heavy business, embracing all descriptions. Carpet Wools, both at home and abroad, are particularly scarce, and it is with much difficulty that our mills procure supplies.

Considerable of the Wool included in sales reported was sold to arrive.

CENTRAL PACIFIC RAILROAD OFFICES.

The new Railroad Offices embracing the Central Pacific and Southern Pacific, are now located in their new Building, situated on the corner of Market and Montgomery streets south, opposite the Grand Hotel, a very central and commanding situation as well as very convenient.

The new Building, with the offices and all the interior arrangements are fitted up in a chaste and elegant style, complete in everything suitable for a very large business. Each and every department complete as clock-work, the machinery like the Telegraph will quickly respond to the touch of the Head operators. It is ordered "Touch and go."

Agriculture.

Agricultural Science.

MEDIOCRE TEACHERS.

[We present our readers, and especially those who are identified with our Fairs and all Public Exhibitions with a very excellent and most truthful Essay upon PUBLIC TEACHERS OF AGRICULTURAL SCIENCE, which we copy from the *New York Working Farmer*, a valuable Editorial from that Journal. —ED. F.]

The recurrence of our Annual Fairs makes the suggestion not inappropriate that the speakers for these occasions ought to be selected more with reference to their competency as Agricultural teachers than has generally been the case in former years. The majority of our Agricultural writers and speakers are mediocre enough. A man may be a well-bred lawyer, editor, doctor, politician or statesman and be wholly unable to cope with the questions which the usual attendants at a State or County Fair need to hear discussed. And yet it is men of this stamp that are mostly invited to deliver the annual address. Their sentences may be well turned—the voice and gesture eloquent and fascinating—their studies are Virgil and the Agricultural classes abundantly thorough; but these are not the qualifications required. To be competent to instruct farmers, the speaker must be a first class farmer himself; not a mere theorist and bookworm, but one who knows from open-air experience whereof he affirms.

The mediocrity among Agricultural teachers of which we complain, is widely felt in the community, especially so in our Agricultural Colleges. There it is difficult to obtain Professors capable of teaching this science to the pupils. The old routine of college studies is full to overflowing of would-be Professors, but none of these know anything of farming. All their knowledge is emphatically "book knowledge." The science of plant-growth; of plowing, manuring, underdraining, of stock-raising, farm machinery, etc., are to them a sealed book, so far at least, as practical experience is concerned. But he who aspires to teach farming more successfully than it can be taught at home to our young farmers, must be familiar with its minute operations, and with the appearance and habits of plants, no less than with books bearing on the various subjects connected with the farm.

When our Agricultural Colleges, in the course of time, shall send forth an educated class of farmers, fit to conduct the operations of the farm in a scientific and successful manner, the existing dearth of competent teachers will no longer be felt. Every first-class graduate from an Agricultural college will be qualified to teach the sciences relating to soil-culture, or to deliver instructive lectures to his fellow-farmers. The multiplication of these colleges throughout the country, and the strenuous efforts of their founders to place them upon a first-class basis, will undoubtedly rapidly tend to improve American Agriculture, and give its professors a respectability and consideration in the community, equal to any of the learned professions. Farmers then will fill our legislative halls, become honest and capable Presidents, Governors and Officers of State, and official corruption, which is now a stench in the people's nostrils, will be banished in a large measure from its habitual haunt.

CULTIVATION OF ASPARAGUS.

The culture of asparagus was lately the subject of discussion by the members of the Horticultural Society in Dessau; and among the views expressed were the following: That the old method of burying large quantities of manure deep under the surface was objectionable, since asparagus does not derive its nourishment from a great depth, and the plants often become too deeply imbedded when the thick substratum of manure collapses by rotting. The preference often given to old plants, in making selections for a new bed, was also considered a mistake. Plants become sickly and less vigorous in the seed bed, so as to be much more sensitive to the change in transplanting. Southern exposure, shelter from cold winds, a porous soil, and the total absence of trees, were recommended as essential conditions to the highest success. The soil to be turned to the depth of from two to three feet, and then manured to the depth of one foot. This is most conveniently done in autumn, during dry weather. Spring is the best time for planting, and the best direction of the trenches for the reception of the plants is from north to south. The earth taken from the trenches is "walled up," as it is termed, between the rows, and upon these other vegetables may be cultivated while the asparagus bed is young; but they are eventually absorbed in filling up the ditch around and between the plants. Well-rotted manure, or suitable compost, is combined by the earth of the walls for this purpose. Besides giving constant attention to stirring the soil and weeding, the young plants used to be watered regularly whenever the state of the weather requires it.

[*New York Wine and Fruit Reporter.*

[As the autumn is the best time to prepare the Asparagus plantation, say November and December to lay out, dig, trench, and put the soil in condition to plant, we give the above remarks of an exchange as aids in the work.—ED. F.]

TEETH OF THE SHEEP.

[We give from Randall's famous "Sheep Book" the following information relative to the "Teeth of the Sheep" by which their *age* is positively proved. This information is all important to Sheep-men, particularly those who are *new in the business*.

"Randall's Sheep Book" is the standard work on Sheep the world over, and should be in the hands of every Sheep-man on our Coast.—ED. F.]

The sheep has thirty-two teeth—eight incisors in front of lower jaw, and six molars on each side in the upper and lower jaw. The lamb at birth has two incisor teeth visible, or pressing through the gums. Usually before it is a month old it has eight comparatively short, narrow ones, as is Figured. At about a year old, though sometimes not until the fourteenth or sixteenth month, the two central "lamb teeth" are shed and replaced by two "broad teeth," which gradually attain their full size. The sheep is then termed a yearling, or "yearling past." Two lamb teeth continue to be shed annually and replaced by broad teeth, until the sheep has eight incisors of second growth, when it is termed "full mouthed."

The teeth afford the most decisive test there is of the age of a sheep, until it is four years old though there is sometimes a variation of a number of months or even a year in their development. High kept and rapidly grown sheep acquire their second teeth earlier.

When perfect, the incisors are sharp, rounded on the edge, as in the cuts; a little concave without and convex within (or gouge-shaped;) and they project forward, so that with the firm, elastic pad on the upper jaw with which they are brought into contact, they are capable of taking up the smallest body. They will not only crop the shortest grasses, but scoop up its very roots. A sheep yarded on unpulled turnips usually scoops out the centers of them so far as they are in the ground, leaving little more than the mere skin of the sides and bottoms, remaining unbroken like cups in the soil.

At six years old the incisors of the Merino begin to diminish in breadth and lose their fan-like shape and position. At seven they become long and narrow, stand about perpendicular with respect to each other, and have lost their rounded, cutting edges. At eight they are still narrower, and their outer ends begin to converge considerably toward the middle. At nine the convergence is still greater, the teeth are not thicker than very small straws, and are very long, particularly the middle ones. At ten these appearances have increased and the teeth are becoming quite loose. At about this period of life the teeth begin to drop out, though frequently are retained until twelve.* The sheep is then called "broken mouthed." In two or three years after beginning to lose them, all the incisors are usually gone but one or two. These should be pulled by a pair of nippers, as they prevent the sheep from cropping short grass.† The gum of the lower jaw hardens after their removal, so that it becomes, in a measure, a substitute for the lost incisors, in *separating* their food. The molars, though shortened and worn, are never shed, so that *mastication* continues complete. Old breeding ewes often live, thrive, and raise good lambs three or four years after ceasing to have any front teeth.

English sheep become broken-mouthed from three to four years earlier—the difference about corresponding with the difference in the longevity of the races. Sheep of all kinds differ not only as between individuals, but between flocks in the period of losing their teeth. If fed *uncut* and dirty roots, they lose them much earlier. The *prying* action of the incisors, as they are employed in scooping out a turnip, for example—particularly if it be partly frozen—or the obstruction of a bit of gravel (which often finds its way from the tap roots even among *cut* turnips) between an incisor and the pad above, it not unfrequently causes a loose one to be detached, or a comparatively firm one to snap off.

*It is stated by Dillon, in his Travels in Spain, 1779, (quoted by Youatt,) that "the teeth of the Spanish ram do not fall out until the animal is eight years old; whereas the ewes, from the delicacy of their frame, or from other causes, lose theirs at five." These are undoubtedly the loose assertions of a misinformed traveler: at least, they do not approximate to accuracy in respect to the American Merino.

† Mr. Youatt is clearly mistaken, however, in saying "that if any of the teeth are loose they should be extracted," (*vide* p. 5.) *All* the incisors are frequently loose, to a considerable degree, a year or two before any of them drop out, and the sheep remains capable not only of cropping grass, but of scooping out a turnip in the manner already mentioned. Nor should all be pulled when only one or two drop out. The judgment of the shepherd must be his guide in the matter; but as long as any five incisors remain together or press together, it is not usually best to remove them.

RAISING POULTRY.

In *Lewis' Practical Poultry Book* we find good advice especially to those who are new beginners, which they should observe:

"*Starting out in the Business*, plans should be well matured and digested beforehand. A good, convenient poultry house should be properly constructed, sufficiently large to contain the number of birds one desires, warm and dry in the winter, well ventilated, and it should be kept scrupulously clean. The house should not be overcrowded, but just large enough. Nothing is made by over crowding the henery; on the contrary, it will prove detrimental. The fowls must be fed regularly and at stated periods. They must have plenty of pure water at hand at all times—this is of as much importance to the health of the brood as proper food. If possible, they should also be given, in addition, a plot of grass for a run. Place within the henery a dust heap; this may consist of wood or coal ashes, sand, or dust from the streets. It should be kept under a cover, so that it will not become drenched with rain or snow, and to it the fowls should have access at all times, to dust, and thereby rid themselves, in a great degree, to the numerous parasites that infest them. The habit of

GIVING TOO MUCH FOOD

to poultry, in a short space of time is a very bad one. If one notices their habit he will perceive that the process of picking up their food under ordinary, or what we may call the natural condition, is a very slow one. Grain by grain is the meal taken, and with the aggregate no small amount of sand, pebbles, and the like, all of which, passing into the crop, assist digestion greatly. But in the "hen-wife's" mode of feeding poultry, a great heap is thrown down, and the birds allowed to "peg away" at such a rate that their crop is filled too rapidly, and the process of assimilation is slow, painful and incomplete. No wonder that so many cases of choked craw are met with under this treatment. Many other diseases which affect chickens might be prevented by breeders, were a little precaution taken in the simple matter of feeding.

TO PRODUCE EGGS.

More eggs can perhaps be obtained from hens by mixing breeds than by any other mode; and it is generally conceded that crossing also promotes the health of fowls far more than the vile practice, as some are pleased to term it, of in-and-in breeding. Little trouble need be apprehended from roup, gapes, cholera, and other diseases in poultry, if that care is observed in breeding and crossing that is so essential to all well regulated poultry yards.

BEET SUGAR IN WISCONSIN.

A beet sugar manufactory was established last year in Black Hawk Valley, twelve miles from Sauk City, in Sauk County, Wisconsin, by thirty-four German farmers, upon the co-operative principle. They planted 180 acres in roots, one-sixth of which failed through drought; the remainder averaged about ten tons per acre. The manufacturing operations of the company were embarrassed by a variety of causes, prominent among which was the delay in receiving machinery from Europe, caused by the Franco-Prussian war. The manufacture was not commenced till the middle of February, when it was found impossible to work up the entire crop, the larger portion of which was fed to stock. Under all these disadvantages some 40,000 pounds of sugar were made and marketed at an average rate of 10 cents per pound, including all grades. The coming year at least 200 acres will be cultivated with sugar beet, and operations will be gradually extented. The machinery in use was partly imported from Europe and partly from Fond du Lac, Wisconsin, and Chatsworth, Illinois. It cost $25,000 and the building $10,000. The capital of the company is limited. Its distance from machine-shops for repairing, and the necessity of wagoning twelve miles the sugar product and some of the material used in its manufacture, are drawbacks to the enterprise; but under the efficient management of Mr. Wifferling, the superintendent, the company is sanguine of success, both in making good sugar and in realizing a fair profit upon the investment.—*New York Wine and Fruit Reporter.*

The United States produces more grain, in proportion to the population, than any country in the world. According to the census of 1870, wheat was found to be produced at the rate of 39.3 bushels to each person. By the census of 1850, the United States produced 36.3 bushels for each person then in the country. Roumania, one of the Danubian principalities, produces 25 bushels to each person, being the second in the ratio of production. European Russia stands third, producing 23.1 bushel to each person.

Sheaves of Grain.

As the present Season will offer many interesting and valuable samples of Grain of all kinds, we shall feel greatly indebted to our subscribers, and all interested in our Grain Crop, for Sample Sheaves of Wheat, Barley, Rye and Oats, and any other Samples of this year's products.

We will cheerfully repay them for their kindness, and attention, will send them in return choice Seeds to more than the value, and also pay all expenses of transmission per Wells, Fargo & Co.

Cultivators in such cases can command our services for a full reciprocity.

JAPANESE SILK WORMS EGGS.

ONE HUNDRED CARTONS of Japanese Silk Worm's Eggs of very superior quality to be sold very reasonable in lots to suit purchasers.

Apply at the FARMER OFFICE,
320 Clay Street, San Francisco.

Best machine ever offered for paring, coring, quartering or slicing apples. Does the entire work expeditiously, promptly and well—separating core and parings from fruit at once. Will prepare more fruit for drying, pies, or family use than six ordinary parers. For farmers it is indispensable. Fruit can be taken care of in season, instead of allowing it to rot in the orchard. Three times the price of the parer can be saved on every crop. A barrel of apples can be got ready for pies in one hour, saving in labor alone, in a single year, many times the cost of the parer. Territory for sale. Agents wanted. Send for circular.

OIL CAKE MEAL

THE BEST FEED KNOWN

FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal and in the United States Government Report of the Department of Agriculture for 1863, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 17 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 23 2-100 per cent. For life-sustaining properties to all stock exposed to sudden changes of weather or over-driving they are equal

For MILCH COWS it is particularly valuable, increasing the quantity of milk and improving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food generally mixed with the mash of bran slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($40 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

San Francisco.

TRUE'S

IMPROVED

POTATO PLANTER.

This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops those pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed.

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of incalculable value; because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor-Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

Horticulture.

EASTERN HORTICULTURE.

EASTERN VS. CALIFORNIA FRUIT.

California Horticulturists are very anxious to have some of our Eastern fruit-growers send specimens of their fruit to the Pacific Coast, where it can be placed in fair competition with some of California's best, and the vexed question of quality, amicably settled. It seems natural for every section of the country to claim a special pre-eminence for one or more points in fruit culture.

The Californians have always claimed that their fruit was the finest in size, fairness and productiveness, and no one has disputed their claims,—but as Eastern horticulturists have, from time to time visited that coast, they have felt that the claim for *quality* could not be as well maintained as the fruit grown on the Atlantic slope.

The characteristics of California fruit, which we gained from careful notice while we were there last year, were, viz.: a sweet, pleasant flavor, dryness, mealy texture, freedom from acidity, or but moderate sub-acidity, a lack of juice, spirit or spicy, aromatic taste. It is very natural for fruit grown in a dry country, to be less juicy than those grown in a land of frequent rains, hence more sweet, and less distinctive in flavor. Here, our fruit has a *spirit, aroma*, and an abundance of juice, which makes the eating of almost any variety perfectly luscious. Nearly every visitor to California will, we believe, confirm these opinions. And if any of our friends could send to California specimens of our Beurre d'Anjou, Seckel, Bartlett, or other pears, to be tested faithfully in comparison with some from California orchards, we doubt not it will be found there is quite a difference in *flavor*, if not size.

HOW THE LEAVES OF THE GRAPE VINE AFFECT THE RIPENING OF FRUIT.

A practical grape grower in his letter to the *Country Gentleman*, says that he observed that when the leaves of the vines were scant, the fruit did not ripen well, while in another part where the foliage was thick, the clusters of fruit were larger and ripened well. Where a Concord vine was close pruned, yet abundance of leaves retained, the fruit ripened at the proper time, but where the fruit was unusually heavy and close, it did not mature rapidly. Hence he forms the general conclusion that an over heavy crop is tardy in ripening. The cure for this is *thinning*. It hastens maturity, increases the quality and size of the fruit, favors the wood growth, and the set of fruit for the year following. The same rule will apply to all standard fruits as well as the grape.

A NEW SEEDLING STRAWBERRY.

As some parties are giving, through the press, accounts of the high promise of their new seedling strawberry plants, allow me to state that I now have the most promising one that I have ever raised.

The seeds were from Downer's Kentucky.

Sown April 22d, 1870, came up last of May of the same year.

At the present time (May 25, 1871), the plant alluded to, has ten well developed fruit stalks and about sixty-five berries on it, most of them large.

In appearance and flavor it resembles its parent, and it is, also, very late in ripening.

MARKET VALUE OF CHERRIES.

A greater number of varieties of cherries have been noticed in our market this season than usual. The first cherries that arrived from the South were the May Dukes, from Delaware, about June the 1st, and sold for twenty cents per pound. From that time to July 1st, they were followed by the Gov. Wood, Black Heart, and Black Tartarian. The last is a favorite variety, and large quantities are received from Rochester and Central New York, selling from fifteen cents per pound upwards. Pie Cherries, Morello, Early Richmond, brought six to ten cents per pound. By far the finest cherry for amateur culture, is the Napoleon Bigarreau. It is more firm, but not as juicy as some of the others, yet is very handsome and large, and receives an extra price, rarely ever falling below twenty-five cents per pound. Cherries are apt to spoil worse than any other fruit, hence are valuable only for a near market.

DR. WARDER STRAWBERRY.

This is the name of the new seedling raised by Louis Ritz, of Plainville, O., and which received the $50 Cup offered by the Cincinnati Horticultural Society. Its characteristics are as follows:—"great productiveness—every blossom bears a berry—does not require high culture—has uniform shape—large size, and has sufficient firmness for a market, berry, has a better flavor than our market sort, and ripens later than others (won't do for profit near New York), has a healthy foliage and will stand extremes of temperature well."

STRAWBERRY BUSINESS AT THE EAST AND SOUTH.

Norfolk, Va., shipped to New York, this spring, 1,200,000 quarts. Delaware and Maryland sent to Philadelphia and New York about 3,000,000 quarts. The crop of Southern and middle New Jersey, sent to Philadelphia and New York, was about 1,000,000 quarts. From Northern New Jersey, Hudson River, Connecticut and Long Island, about 1,000,000 quarts were raised. Boston receives about 500,000 quarts during the season; so that the aggregate of strawberries consumed in three great cities, and produced in a belt of country reaching from South Carolina to Maine, is about 7,000,000 quarts annually. The value, this year, is about twenty cents net per quart to the grower.—*New York Wine and Fruit Reporter.*

THE HOP ON THE WINE PRESS.

We read in a commentary on Appianus an annotation, which would seem to be of a certain historical interest, about the pressman dancing the *epilénion* on the vinegrapes.

It was indeed an ancient custom to dance on the wine press, and to tread the grapes while hopping and jumping; this dance was called *epilénion*—that is to say vintager's hop. Thus Theocrite, in Idyl 7, V. 24, says; "Are you going to hop or jump about on the wine-press for any of our city's inhabitants?" This dance was a pantomime in which were represented the different occupations performed in time of vintage. Longus, in his charming Pastoral on the courtship of Daphnis and Chloé, 1, 11, page 71, ed. by Villoison, describe it as follows: "Delighted to hear the sound of Philets's flute, the shepherds listened in profound silence. All at once Dryas arose, asking the old man to play a bacchanalian air, and began to dance the pressman's hop. We saw him now cutting the grape and gathering, now carrying baskets, now treading the grapes, filling the casks, drinking the sweet wine." *Epilénion* was also the name for the vintager's song to the tune of which this pantomime was danced. Athenæus, in the description of the pompeantry of Ptolemy Philadelphus, L. V., page 119, speak of it in the following terms: "A car was following, with four wheels, twenty yards long, sixteen broad, drawn by three hundred men, and the top of it stood a wine-press, four and twenty yards long, and fifteen broad, loaded with grapes, which sixty satyrs were treading upon, while singing an *epilénion* to the sound of the flute."

CHOICE

AUSTRALIAN SEEDS.

We have just received from Australia a very choice collection of Australian Seeds, particularly of the

AUSTRALIA GUM TREE.

Of these we have SIX KINDS, and some never yet had here of new and choice varieties.

AUSTRALIAN WATER PLANT.

In this collection we also have the WATER PLANT, a rare flower known as *Villarsia Cathlifolia*, which we shall introduce into our Lakes and Ponds.

JAPAN SEEDS.

These Seeds with a new invoice of Japan Seeds, Evergreens and Seeds of the Tea Plant, and also of the Camellia, make a collection of valuable Seeds, now for Sale at the

FARMER OFFICE.

GARDEN GROUNDS LAID OUT.

THOSE WHO WISH THEIR GARDEN GROUNDS renewed and replanted, or those who desire to have Grounds Designed and laid out upon Scientific principles and with correct taste and skill, as

Adapted to this Climate,

can have this work done to their satisfaction by calling at this Office, where all the best works on Gardening can be found, and where the various Styles, both European and American, can be seen. Grounds of any extent, from

ONE THOUSAND ACRES,

to small Gardens, in our City, will be designed and laid out and the TREES, PLANTS, Shrubs and Vines, and Bulbs all supplied of the very best variety and reliable quality, and the work done to complete satisfaction, by calling at the Office of the California Farmer.

None but Educated men ever engaged in such work.

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS (where parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books, to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rate, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA. By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full Illustrations of them.....Price $5 00

THE GARDEN VEGETABLES OF AMERICA. By Fearing Burr.....Price $2 50

CULTIVATION OF THE GRAPE. By W. C. Strong, of the Nonantum Hill Nurseries, Brighton. A complete guide to Grape Cultivation.....Price $1 00

FLOWERS FOR THE PARLOR AND GARDEN. By Edward Sprague Rand, Jr. Beautifully Illustrated.—Price.....$3 00

THE BOOK OF ROSES. By Francis Parkman. Containing all known Roses, with directions for the cultivation of all varieties worth growing. Beautifully illustrated.....Price $3 00

GARDEN FLOWERS AND HOW TO CULTIVATE THEM. By Edward Sprague Rand. With complete descriptions of all hardy and out-door Plants, Trees and Shrubs.....Price $3 00

THE PARLOR GARDENER. A Treatise on in-door Plants. By Cornelia J. Randolph.....Price $1 00

SPLENDID ENGLISH BOOKS.

This is a Rare and Valuable work in two Royal Octavo Volumes.

For sale at the Farmer Office.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash, or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns several of which we have the exclusive sale for this Coast.

THE POTATOE PLANTER,
JEBB'S PATENT CHURN,
CHEESE CURD CUTTER
PATENT WEEDING HOE,
LIFTING HAY FORK,
WITH OTHER VALUABLE IMPLEMENTS.

☞ Every kind of implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

TREE SEEDS

OF ALL THE VALUABLE KINDS.

Also,

TOBACCO SEED.
COTTON SEED.
COFFEE SEED.
TEA SEED.

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER, Fruit and Ornamental Seeds.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference.

FLOWERING BULBS.

RARE AND CHOICE KINDS

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

Please remember that Lawns can be made so as to be perfect at any season of the year.

FINEST MIXED LAWN GRASSES,
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

EVERGREEN AND DECIDUOUS SHRUBS, ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

ORANGES, LEMONS, FIGS,
Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, &c. &c.

Also the best varieties of Strawberries, Raspberries Gooseberries, Currants, and Blackberries,

PERPETUAL FLOWERING ROSES

Of the best kind

GREENHOUSE AND BEDDING PLANTS,

These are grown at our residence under our own care where they always can be selected.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

WARREN & CO.
Farmers' Headquarters 320 Clay Street, up-stairs

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING, AUGUST 24, 1871.

THE CALIFORNIA FARMER READING ROOM AND MUSEUM OF NATURAL HISTORY.

220 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use, a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for *one* insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

OUR NEW YORK AGENCY.

Geo. P. Rowell, & Co., 40 Park Row, New York

S. M. Pettengill & Co., New York

Are the Sole Agents for the CALIFORNIA FARMER in that city. They are authorized to contract for our Journal for the Advertising and make Collections for the same at the very lowest rates.

Our many Patrons in that city and State are requested to call on them, give their business to them and subscribe for our Journal which will always be found on file at their READING ROOMS

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* of our *Journal*, to which we would direct their special attention.]

PRES. HALLIDIE' ADDRESS.

We occupy our columns this week with the excellent, practical address of Pres. Hallidie of the Mechanics' Institute, because it contains so much that should elicit attention as connected with the vital interests of that Society.

The suggestions of the President in relation to the erection of an Institute Building are important, and we hope some of our Millionaires in Purse, and Millionaires in Heart will erect and donate such a building, one that will do great good, Honor the Donor, and prove a Monument to his memory forever.

COMPLIMENTARY.

We acknowledge the courtesy of a Complimentary Season Ticket from the Secretary of the State Agricultural Society.

We also acknowledge the same courtesy from the President of the San Joaquin Valley District Society, and return thanks to each for the same.

LAID OVER.

A big pile of Letters, Catalogues, Books, Magazines, &c., sent us, we are not able to reply to till our next, when we will give them *half a column*.

COMING AGRICULTURAL FAIRS.

By referring to our List of State and County Fairs, all can be advised when and where they are to be held.

Santa Clara Valley Fair commences next week as will be found by the record, and great effort has been made to have a "Good Fair."

FARMERS, COME SEE US.

Farmers, Stock Raisers, Vineyardist, Florist, and all who are interested in the cause of Agriculture, Horticulture and Floriculture, are respectfully invited to call and pay a visit to the FARMER OFFICE when they come to visit the MECHANICS FAIR especially as we have much to offer them.

All the leading Agricultural newspapers in the Country on file.

Farmers will find a large *Library* upon every branch of Science, Herd Books of Stock, and we shall always have some samples of CHOICE SEEDS for every one of our Subscribers and Patrons that call.

Strangers from abroad will always be made welcome, and all and every information given them of LANDS, and FARMS *for Sale*.

The MUSEUM of the FARMER OFFICE will show them many Rare and Curious things of the early day of CALIFORNIA, and *specimens* of its *History* and *Resources*. We Bid all Welcome.

FRENCH SUGAR BEET.

A Fine Lot of the GENUINE IMPERIAL FRENCH SUGAR BEET SEED, raised here from the best of seed *Imported* direct from France.

For Sale in Lots to suit purchasers, and in quantities at low rates.

Apply at FARMER OFFICE

CROPS, SEASONS, PROSPECTS, &c.

That there is a goodly Grain harvest there can be no question, and that large stocks are held back in the country, hoping better rates, is the cause of so little coming to market.

Reports come to us from many places of very large yields per acre, and when there shall have been a just and careful scrutiny of those lands where crops have failed this year, in many cases, the fault was one that will be remedied hereafter by a wiser management both as regards the system of Cultivation and feeding the soil.

Thus far but little grain has gone abroad. Flour has been largely exported to China, and will in all coming years be largely, very largely increased, for where a few thousands buy and eat our flour now, millions will want it and will have it.

The harvest of Barley, Oats, Corn, Rye and Beans will turn out very favorable as a final result.

The Hay crop will prove larger than anticipated, and so with some other crops of minor value.

The Wool clip has been the lucky one for the grower, large in amount and good prices for all the Spring clip, while the Fall clip is bought for, bought up in advance, and at high figures.

The Fruit crop will prove an enormous quantity. Peaches are already overstocking our market, coming in by the thousands of baskets and boxes, but many are small and worthless and are thrown into the dock, the owners had better feed their swine with them at home and save the freight and charges. Some very splendid Crawfords were in market from Colome, done up in papers in fine order, these brought good prices, as all fine fruit well packed always will.

Pears are coming in plenty and part of them very fine.

Grapes are showing better, Tokays and malaga are in market. Grapes will be very abundant and cheap this year. Nectarines are plenty but small, the trees are overcropped, this is a poor plan for the grower.

Apples are plenty, but the fruit is common.

Small Fruit, the berries of all kinds, are plenty and very cheap.

Melons plenty and fine.

New crop of Figs are in market of several kinds and reasonable.

We are confident our crops as a whole will show good final results in value at the year's end. This should give courage and satisfaction to all, and shut up the mouths of croakers and grumblers.

CITIZENS OF SACRAMENTO AND THE CENTRAL PACIFIC RAILROAD.

The citizens of Sacramento, those of the highest standing, the Bankers, Merchants, and those of the wealth and influence to the number of 5,274 have signed a card saying they have no affiliation with the feeling shown by personal attacks made by the *Sacramento Union* upon the management of the Central Pacific Railroad.

This large number of signers set forth the causes of conflict in their Circular with the following very just and manly views:

"The Projectors and Builders of the Central Pacific Railroad are our friends and neighbors, and we desire to show what has been done by them for the benefit of Sacramento, and we deprecate the personal attacks made on them by said newspaper, and we do believe that while guarding their own interests, the Managers of the Central Pacific Railroad have always worked, and it is their desire to work for the best interests of Sacramento."

This action we are glad to see spring from *Sacramentans*. The *Sacramento Bee* gives the report and card, and this course by the leading citizens of Sacramento will redound to their honor, for it is justice to the Railroad Managers, whom we have always believed, and have so published our faith that they were doing all they could for the highest *Public Good*.

REPORTS OF AGRICULTURAL COLLEGES.

We are desirous to obtain from the various AGRICULTURAL COLLEGES in all the States their Reports, Lists of Officers, and Professors, with all Statistics of progress and such important Essays and experiments as may have been tried and recorded, showing good practical science in Agriculture and kindred sciences.

Everything relating to the prosperity of our Agricultural Colleges is of peculiar interest to us and we take great pleasure in recording and reporting the same, and we shall be very grateful to the Secretaries of such Institutions, or any other officer that will keep us advised of their Institutions.

SAN JOAQUIN VALLEY AGRICULTURAL SOCIETY.

We call special attention to the coming Fair of the San Joaquin Valley Agricultural Society. President Doak informs us that the Managers will do all in their power to make the largest and best show yet held in Stockton, the Stock show promises to be very fine indeed.

A new Pavilion, 200 by 50 of wood, and the Great Pavilion of 100 feet in diameter, will give show-room for a Grand Fair. The Premiums will be liberal and their prospect is good—as the Board of Managers are in earnest.

A FAMILY OF SUICIDES.

At the inquest of the body of a man who committed suicide recently in St. Louis, the fact was developed that he had attempted to hang himself five months before, but was cut down by his wife, and that he was the last of a family of six brothers and sisters, all of whom died by their own hands.—*Philadelphia Medical Times.*

Every boy and girl should be taught some useful employment, such as shall make them self-supporting.

THE MECHANICS' FAIR.

The Grand Pavilion Display continues to attract attention and draw crowds daily and nightly by the Thousands, and the prospect is that it will prove the most profitable and successful Fair ever yet held in our State.

THE AGRICULTURAL DEPARTMENT.

This department is well represented by some of the best Implements ever yet exhibited in our State, and we know our Farmers appreciate them by the examination they give to them. We are preparing a careful list of all the most important

THE HORTICULTURAL AND FLORAL DISPLAY.

The First Exhibition of the Bay Horticultural Society is a good success, highly creditable to our Florists, who make the best show, the Horticultural Department being too meagre where Fruit is so plenty.

MANUFACTURES AND MECHANICAL DEPARTMENT.

Both these Departments show great advance in the capacity and skill of both manufacturers and artizans, and speak well for our progressive power.

THE ART GALLERY.

This reveals many fine specimens of the skill and genius of those who make art a science, and the day is not far distant when the names of many more of our artists will rank high on the scroll of fame.

We are taking careful note of the progress, and shall *tell what we see in our own way*.

BAY DISTRICT AGRICULTURAL FAIR.

EXHIBITION OF STOCK.

The Exhibition of Stock at the BAY DISTRICT AGRICULTURAL FAIR this week, was most highly creditable to our State, and to the owners of the Stock on the grounds.

The grounds, however, are located at too great a distance from the city to make it attractive, as the place is much exposed to the cold bleak winds that sweep over the grounds fiercely every afternoon, cold as Greenland.

The number of herds, and the excellence of the whole display exceeded the expectations of the friends of the Show themselves.

It was difficult to obtain a fair show of all the stock by reason of the excitement and confusion of the Races then in their full operation each day.

We have personally and carefully examined the several herds and have prepared our list, and shall wait for the announcement of the Committees, and publish List and Premiums all together in our next.

AGRICULTURAL EDUCATION.

The Great Convention of the Friends of Agricultural Educational meet at Chicago, those most active in this work and to be present are the Presidents of the Agricultural Colleges and Industrial Universities from all portions of our country with distinguished Professors and Friends of the cause from the Provinces and from portions of other countries.

In the long roll of names that will attend we regret to see *none from California*. Where is the University of California?

We have a Communication under the head of "Jottings" that happily alludes to this grand meeting, to which we call special attention.

GREAT NORTH-WESTERN EXPOSITION.

We have received the Premium list and Regulations of the First Annual Fair of this excellent and prospering Association, to be held at Minneapolis, commencing September 11th, and to continue six days.

The Managers, who are composed of the solid business men of Hennepin county, have spared no expense necessary to make this the great Fair of the North-West. They have offered *unparalleled inducements* in the way of *Cash Premiums*, which will undoubtedly bring out the largest exhibition of herds of fine stock ever held in the West.

The Premium List, in all departments, is very full and premiums liberal. The grounds of the Association, covering seventy acres, are as fine as any in the country, and the buildings the best on any ground, east or west.

The inaugural address will be delivered on the third day of the Fair by Hon. Horace Greeley.

We wish our enterprising Fruit-growers and our Manufacturers would send samples of the Products of our State to this Exposition, it would do our State good and *benefit the Exhibition also*. Our Railroad Managers will be very liberal to all who will aid such enterprises, California should be represented.

SWEENEY IN HORSES.

A correspondent of the Cincinnati *Gazette* takes, to cure this disease, equal parts of tallow, beeswax, marrow (out of beeves' bones) and sheep's tallow, and from one gill to one quart of whisky; also one table-spoonful of salt. Put the first four articles into a pot or kettle; melt them together; then put in the other two articles, and then apply it to the affected part of the horse; bathe in with a hot iron as hot as the horse can bear. You may work your horse right along.

EUGENIA UGNI.

All who possess orchard houses should procure a plant or two of this myrtle. It fruits profusely, and possesses the most delicious flavor imaginable. In general appearance it bears a close resemblance to the common myrtle (Myrtus communis). It may be propagated freely from cuttings of the young wood in a moderate heat.—*Gardener's Weekly.*

GOOD MOTTOES FOR THE HEART.

A mother's prayer will draw up from the depths of the sea.

A father's blessing cannot be drowned in water, nor consumed by fire.

JAPAN AND THE UNITED STATES.

"In one of our Exchanges the writer says:

"Who would have thought a generation ago that the languages of China and Japan would have formed a part of the course of study in our Universities? A Professor in Cornell University, who has had a class in Chinese for a year, has recently commenced a course of lectures on Japanese which he claims as being now useful to the business men, the tourist, the naturalist, to naval and diplomatic officers, and missionaries, as well as to general scholars and philologists. The Chinese and Japanese are also to be taught in the new philological department at Yale College. In the meantime the papers speak of a literary man who is making haste to master the French before it is a dead language!"

Yet now in many of our Colleges and all over our country we find Japanese scholars and the Chinese seeking for the knowledge of all our Institutions, our Manufactures, Products and Mechanical Industries, and striving to take back to their own country all the knowledge that the human mind can grasp.

Why might we not here as Californians, wonderingly ask?

Who would have thought *twenty years* ago when our streets were filled with miners, that within this brief space SAN FRANCISCO would be acknowledged almost the world over, as the grand *Entrepot* of the trade of the Asiatic region?

Who would have thought that within that little space of time CALIFORNIA would have so far advanced as to have the Teas, Silks and all Chinese and Japanese's products unload from majestic Steamers upon large piers by the thousands and tens of thousands of packages, and these Goods pass by Railway over the Sierras to New York in less than *two weeks*.

Who would have believed within that brief time CALIFORNIA would have her hundred Colleges, Academies and Seminaries of learning of the highest standing, and a STATE UNIVERSITY across the Bay, and Twenty Japanese students to be present at the Commencement Exercises, taking an interest in this College as the Representatives of their nation, and some of their number to remain as students in this and other Colleges of our country?

Who would have ventured even to say at that time that where then stood the high sand hills in the then back part of our city (now Stockton street) a spacious Pavillion covers 100,0000 feet would be erected, containing Manufactures of the highest *style* and quality of the leading rich Goods then imported, and Steam Engines, Hydraulic Machinery and various Goods, and a world of Products, and that JAPAN would come with her Rich, Curious and Rare productions, and by her own Representatives show these goods at a Public Fair, where Ten Thousand people would gather daily and nightly beneath playing Fountains, and where 12 to 1500 brilliant gaslights would make a "Fairy Scene?" Who would have supposed twenty years ago such things would be? yet our citizens can realize them all in our midst now.

We ourselves *realize* them, and *enjoy* them, for we once *dreamed* in *Faith* that such a day would come to California, for we believed firmly her *Geographical* position would bring these things to pass, and when we met these Japanese students at the University Exercises recently, we saw our early faith was not without hopes but that now it is a reality.

On our return from the meeting that day we turned to our early records of *California* and read the Oration of Rev. Wm. Speer, delivered in this city at our request in Music Hall, in 1853, and printed in the first volume of the *California Farmer*, an Oration most Prophetic.

We also opened the *Farmer* and there read under date of January 5th, 1854, the following as our belief of the future:

"The present position of California, her relation to, and with the Chinese, and with the *future, and almost certain connection* with the JAPANESE present a view to the reflecting mind of the most intense interest."

This view alone opens to us a *world* where our influence tells upon countless millions.

Shall this Influence be exerted, and for Good?

Shall CALIFORNIA be the "Mission Field" and shall OUR NATION be the *first* to occupy it? God grant it may be so."

This was our belief and hope years before the Ships of our Nation opened up that vast country by Treaty, and CALIFORNIA *was the First* to be connected directly with that country as we are by the line of steamers that now run regularly from this port.

As an evidence and proof how *near* California is to Japan it is said that we now have direct TELEGRAPHIC *communication* with that wonderful region.

This is the climax of the wonderful changes in the last twenty years.

HOW TO BUILD UP CALIFORNIA.

With all our present and future commercial destiny, our great undeveloped mineral wealth, our agricultural resources, whose future value no living man can estimate, when the thousands of acres of virgin soil shall bear their golden harvests yet with all this and even more we can never be truly independent while we neglect manufactures. Exports when in excess of imports alone make a State. For two decades we have paid tribute to the civilized world, enhancing values and stimulating growth to alien countries. Let our people produce what they wear and consume; let the busy hum of wheels of industry resound on every hill, by every water-course, telling of the increase of all the varied mechanism known to man's necessities. Skilled artisans will then throng our streets, and the music of wheels will resound on every side.

[Capital thoughts from Hon. M. S. Latham's Oration.]

"MAROONING" IN FLORIDA.

In the spring and summer many people go marooning in Florida. It means to go out into the woods and camp with the whole family, to fish and hunt and amuse yourself generally under the tents or huts—to lead a wild wood life and enjoy a little of savageness with all the appliances of civilization.

The whole family and the neighbors will gather and generally go to some island on the coast, taking guns and fishing tackle, boat, dogs, servants, cooking utensils and some food, lest the hunters might be unsuccessful, and camp out for some weeks.

An island is generally selected because it is more a fishing than a hunting party, and then an island is less likely to be disturbed by snakes and wild cattle. The wild cattle of Florida are really wild animals; they will attack a man on foot or break into a camp and give trouble like other wild animals. An island can be searched at once to see if there are any bears or wild cattle on it, snakes can be destroyed and everything prepared for the women and children, so that they may be left in safety during the absence of the hunters. Tents are put up or shelters made of the palmetto. This palm will make a stout thatch, the long stems are fastened with bear grass strings to poles and shelter made that will endure for many seasons. If snakes are feared, hammocks are swung between the trees, a fire lighted and kept burning day and night, and cooking and housekeeping go on.

If it is an old camping or marooning ground, a garden and orchard of oranges will have been already established; and not only oranges, but grapes, bananas, potatoes, arrow-root and other vegetables, will be already found growing. At any rate the cabbage palm and the manive will furnish vegetables, the hunters provide meat and fish the supplies from home afford coffee and bread. A wild ox killed will furnish beef; salt can be made by boiling sea water, and a jolly time generally can be had if the party are disposed for it. The hunters bring in their game, the fishers the result of the net, rod and spear; coffee and bread are already made, fruit is gathered and a good supper is enjoyed, then to sleep in the hammocks and to-morrow for more sport.

Such an open air life will bring color to the cheek of disease and chase away low spirits and dyspepsia. Such a life can be enjoyed marooning in Florida.

GRAND PRIZES IN HORTICULTURE.

1. The Virginia Pomological and Horticultural Society offer One Hundred and Fifty Dollars.

2. Ellwanger & Barry, of Rochester, New York, offer Fifty Dollars for the largest and best collection of Apples, not less than fifty varieties, three specimens of each.

3. Marshall P. Wilder, of Boston, Mass., offers Fifty Dollars for the largest and best collection of Pears, not less than fifty varieties, three specimens each.

4. Charles Downing, of Newburgh, New York, offers Fifty Dollars for the largest and best collection of American Grapes, not less than twenty varieties, three bunches each.

5. Thomas P. James, of Philadelphia, Pa., offers Thirty Dollars for the largest and best collection of Peaches, not less than ten varieties, of six specimens each.

6. Gen'l R. L. Page, Norfolk, Va., offers Ten Dollars or a Medal for best half bushel of the Flowers Grape.

7. G. F. B. Leighton, Norfolk, Va., offers Twenty Dollars or a Medal, at the disposition of the American Pomological Society.

8. C. D. Barbar, Norfolk, Va., offers Twenty Dollars or a Medal for the best dozen bottles of Scuppernong Wine.

9. L. Barkley, Norfolk, Va., offers Ten Dollars or a Medal for the best dozen bottles of the Flowers Grape Wine.

10. W. H. C. Lovett, Norfolk, Va., offers Ten Dollars or a Medal for best Dried Figs,—cured within the territory of the Society.

11. Hon. Jno. B. Whitehead, Norfolk, Va., offers Twenty Dollars or a Medal for best half bushel of Scuppernong Grapes.

12. W. S. Butt, Norfolk, Va., Two Premiums of Five Dollars each or Medals, one for the best Figs; the other at the disposal of the Society.

OUR PRESENT NUMBER.

We shall send this number to many who are not on our list of Subscribers, and hope after they have examined our Journal they will give their voluntary and cheerful co-operation to this old and long established Journal for the upbuilding of our State.

The success of our merchants depend upon the success of our AGRICULTURAL INTERESTS; the value of REAL ESTATE is also dependent upon the prosperity of *Agriculture*, and our COMMERCIAL INTERESTS also depend in a great measure upon the development of those resources that shall load our ships and give them full freights, and load the cars upon the Railroads also.

We send Extra copies to many abroad who are inquiring about CALIFORNIA; such enquirers should have the FARMER that they may learn of the rapid growth of our State and its capacities for a permanent Home for which they are in search, or for a place of Business, which promises so much in the future.

We send numbers also to those persons abroad who will find it greatly for their interest to ADVERTISE with us now early, in order to secure the trade of the coming season. Advertisers abroad are apt to delay this important duty till the season is too far gone to reap all the good they might.

We hope a cheerful response from many who will read this card addressed to them specially.

The harp of the human spirit never yields such sweet music as when its frame work is most shattered, and its strings most torn.

NATIONAL FAIR.

THE AMERICAN POMOLOGICAL SOCIETY will hold their Fair this year at Richmond, Virginia, commencing September, 7th, and continuing three days. Exhibition open to the Nation. (See Circular in our columns.

Hon. M P. Wilder, President, P. Barry, Esq., Chairman Fruit Committee.

A CARD.

TO EASTERN ADVERTISERS.

We feel it our special duty to notify our Advertisers in all the Eastern States, that if they desire to reap the *Full Benefit* of their advertising that

NOW IS THE TIME TO BEGIN.

It is all important to Californians who desire to *Import from the Eastern States* their

Trees, Seeds, Implements or Merchandise,

that they should know where to find them *month* before they are to be used, so they can by a Correspondence with the parties know *who can satisfy them them to the best advantage.*

Those Dealers in any articles they desire to introduce into the Pacific Coast, should by all means begin early. Soon our season of PUBLIC FAIRS commence, and this is a time when our Journal is scattered widely, and thousands sent out in the Cause of the Fairs and to promote our Industry, and all these will advantage ADVERTISERS.

The advertiser that begins early is the one that takes the lead in the business, and now is the most auspicious for CALIFORNIA will Import everything that is

NEW AND DESIRABLE

cost what it will, and those Business men who are up and doing, *Manufacturers* of Implements for Farmers, Sellers of Live Stock, Seeds, Plants, Trees, Garden Tools, Agricultural Books, &c., &c., should now be ready to send out their messages and let our people know what they have to sell.

The CALIFORNIA FARMER now enters upon its

THIRTY-SIXTH VOLUME,

and can give to all a BETTER CHANCE for PURCHASERS than any other medium, as we go *directly to those* who would purchase.

New Yorkers can send their advertisements to our Advertising Agents, G. P. Rowell & Co., others directly to us. See Terms in our Columns.

Address WARREN & CO.,
320 Clay st., San Francisc.

Home Miscellany.

A COUNTRY ANSWER TO A CITY LETTER.

You say you "pity" me, my sister, cast upon
"The trackless desert of a western wild;"
And that you "feel a sorrow," thinking on
"The gloomy life" of this "afflicted child."

But spare your pity, sister mine,—no need
Has this "afflicted child" of sympathy—
I'll draw a picture—he who runs may read,
And judge who needs the "pity," you or I.

The precedence I'll yield you, for 'tis said,
Age goes before the beautiful each time;
That I shall aught exaggerate, be not afraid;
Or, I in malice, write one single line.

Cobped in the city, toiling day by day
With weary fingers and with aching head,
With fire and food to find, with rent to pay,
And nature clamoring for her daily bread,—

You choose the city still, and love, I ween;
To think by staying there you're coining money.
I know a western hive, that wants a queen,
A goodly hive, whose walls are stored with honey.

I, too, was left a widow, and for years,
Was like a bottle bobbing in a brook;
At length I pitied one poor fellow's tears,
And to my heart a second "idol" took.

An idol yet, but not an idle one;
Plowing and hoeing, dragging, day by day;
Toiling from early morn 'till setting sun;
With heart and muscles set to make it pay.

We have our troubles, and we have our joys,
We have to work, but then our hearts are light:
To make gold wear, you must have some alloy—
And sages say "whatever is, is right."

We may not dress perhaps as fine as you,
(Though to dress fine, I'll own, we're nothing loth;)
We pay for what we wear, and earn it, too,
And cut our coats according to our cloth.

You say you "oft have laughed at thoughts of me
Pickling, preserving, dashing at the churn."
Instead of laughing, you should come and see,
Perhaps, dear sister, you might something learn,

I've learned soap-making, and I've learned to bake,
I've learned to color, and I've learned to knit;
Have made rag carpets, and all kinds of sake,
But have not learned enough just yet to quit.

I've learned to love my pretty western home,
And true kind friends that I have met with here,
I've found another blessing, since I've come,
I' better health than I have had for years.

You "pity" me because I have to "drudge"—
You have to work cooped up in city walls,
I pity you, and in good truth I judge,
"The boot is on the other foot," that's all.

In Æsop fables, of a fox you've read,
Who, luscious grapes above his reach espying,
Finding he could not get them, "Ah" he said,
"They're sour grapes, and are not worth the trying."

Now, sister mine, I have a country home,
And with that home and life believe me suited;
But if you doubt me, just pack up and come,
Certain I am you'll ne'er again dispute it.

Sweet fields around me, green with growing grain—
Grain, which will fill our barns, and pockets too—
One question I'll propound, and then refrain:
Who's to be pitied, sister, I or you?

AUNT LIZZIE, in the *American Farm Journal, Shabbona, Ill.*

THE ELDER SISTER.

There is no character in the home circle more useful and beautiful than a devoted elder sister who stands side by side with the toiling mother, lightening all her cares and burdens. How beautifully the household machinery move on with such efficient help! Now she presides at the table in her mother's absence, always so neatly attired that it is with pride and pleasure the father introduces her to his guest as "our oldest daughter." Now she takes a little troop with her into the garden, and amuses them, so mother may not be disturbed in her work or her rest. Now she helps the boys over their hard lessons, or reads father's paper aloud to rest his tired eyes. If mother can run away for a few day's recreation, she leaves home without anxiety, for Mary will guide the house wisely and happily in her absence. But in the sick-room her presence is an especial blessing. Her hand is next to mother's own in gentleness and skill. Her sweet music can charm away pain, and brighten the weariest hours.

There are elder sisters whose presence is not such a blessing in the house. There own selfish ends and aims are the main pursuits of life, and anything that stands in the way of these is regarded with great impatience. Such daughters are no comfort to a mother's heart. Which kind of an elder sister are you in the household?

Good Mottos for the Heart.

A mother's prayer will draw up from the depths of the sea.

HOW SHALL WE PROSPER?

BY JAS. H. CAMPBELL.

[The following excellent Essay was delivered at the late Commencement of the "Santa Clara College" by one of the Graduates, and by reasons unavoidable we could not publish it earlier; it is indeed an admirable Essay and highly creditable to the author.—ED. F.]

There is no desire more general, and at the same time more noble and praiseworthy, than that which every good citizen must feel for the prosperity of the State of which he is a member. The welfare of our country and the means of securing and augmenting it are frequent topics of conversation, and various ways suggest themselves to different minds by which the goal of all our wishes may be reached.

But the popular mind is exceeding apt to err in its conception of sound, social posperity. It is an easy dupe to the showy appearances of material progress. The vulgar eye takes a narrow, shortsighted view of the question, and is quite unable to discern the source of real substantial prosperity and the sole foundation upon which it can be solidly built.

It is very evident that in order to arrive at a full, clear, and exact answer to this momentous question, it is essential that we should know in what true, social prosperity really consists. It is a wide-spread opinion which has taken a strong hold on the public mind, that it consists in unlimited wealth, in extensive resources, in the greatness of social power, and in the possession of all the conveniences and luxuries known to enlightened nations, and of all the varied products with which highly perfected science and art may may surround the members of a society.

But is it really this which constitutes the prosperity of a society? Is social prosperity then but a synonyme for material civilization? or does it not depend on something more intimate and vital than mere exterior ease and comfort? What guarantee can material civilization, even when most perfect, give us that society is not rotten at the core and ready to crumble at the first vigorous blow of a hostile force? If we are not so unreasonable as to pronounce an apple sound from the goodly appearance of its rind, if we do not judge of a man's strength of mind or vigor of body from the elegance or costliness of his attire, shall we be so irrational as to pronounce upon the health, or prosperity of a nation from the jewels and embroidered garments of its material civilization?

Putting aside this very common but none the less erroneous view of the subject, let us endeavor to obtain a clearer, deeper insight into the real nature of true, social prosperity. If we consider well what is meant by the prosperity of any being, we shall see that it is that condition which renders it more perfect in itself and better fitted to obtain the end for which it was intended. So with society; the more perfect society becomes in itself, and the more capable it is of obtaining its end, the more prosperous it will be. A public society is essentially a union of intelligent beings. Consequently, the more strongly the minds and wills of all the members are united together by the binding force of one great object towards which all tend, the more perfect will be the society and the better fitted to accomplish its end. Hence, the sole power capable of permanent binding together the minds and wills of all, is at the same time the source, the basis, and the necessary condition of social prosperity. But where are we to look for, subject? It can be none other than God Himself, the great principle and good of all created intellects and wills, who has naturally manifested, His infinite truth and goodness through those eternal principles of truth, honesty and justice, which He has engraven on every human heart, and which He has fostered and developed by his religion. These principles form the only irrefragable tie that can bind together intellects and wills, because these only are eternal and unchangeable, and because they present to man the only means of attaining his ultimate end—eternal happiness. These are therefore the essential elements of genuine social welfare. Strip from society the precepts of honesty and religion and you instill into its veins a most virulent poison. Its most vital part is destroyed and the corruption and dissolution of the whole social fabric must quickly ensue. It is with society as with an individual or with a family. Peace and happiness desert the wretch who has abandoned the natural principles of honesty. The corporeal man rises in revolt against the spiritual man. His interior rages until the passions no longer heeding the directions of reason tend to plunge him headlong into ruin. When in the family these principles are no longer practically recognized, what can we expect to find but insubordination and selfishness on the one hand, and on the other, improvidence and oppression, together with all the other evils that attend so lamentable a domestic condition? In a society the effects are similar, but they are diffused over a larger area.

When honesty and religion have lost their salutary sway over society, justice, honor, right, self-sacrifice and true heroism become empty names. We have no longer real society, but in its stead a mere agglomeration of different and discordant parties, having its own views and aims, and each fighting eagerly and solely for the triumph of its own interests; an aggregation of conflicting, selfish and oppressive elements. That beautiful unity and harmony which is the essence of sound society has disappeared and with it the force necessary for the attainment of a social end. The end of society is two-fold: First—To protect and ensure the rights of every one of its members. Secondly—To increase and perfect the goods of both mind and body. The means necessary for the accomplishment of this two-fold end is the unanimous co-operation of all the members, and this co-operation is impossible unless there be a union of minds and wills. It is apparent that, where there is no unity, there can be no efficiency in acting, and therefore no good effect produced; and consequently in such a society, the attainment of the two-fold social end and of human happiness, becomes impossible. In such a society right will be the victim of might, the powerful will tend to oppress, their dependent to rebel. Discord and crime in every conceivable form will arise as the natural offspring of such a self-destroying body. Corruption rendered ten-fold more destructive by the products of advanced science and art, will assail every fibre of society, till it becomes or disorganized in body as it was, from the first, discordant and disunited in mind.

Honesty and religon are then the essential principles of social unity, and only these can impart efficiency to the social action. Without this heaven light to guide her, society cannot reach her end, and the better this shining monitor is kept in sight, the more surely and smoothly will the ship of state glide into the haven of prosperity.

Social honesty is then the unshaken rock on which the prosperity of a nation must be established in order to be lasting. This alone can constitute the unyielding, imputable basis of social welfare. There is, however, another element which, though secondary, is still very important: Society is not a union of mere intellects, but of intellects, each animating a body and forming with it a physical person having both moral and material relations. Hence, as the complete perfection of society would arise from the possession of both moral and material perfection, so likewise, the prosperity of a society will not be complete unless to the moral element we add a material one. The elements of complete social prosperity are therefore two: Honesty, as nourished and developed by religion; and material civilization. Material civilization is then a good to be earnestly desired and sought after by every society. Its progress should be a matter of social solicitude, and the wisest measures should be taken to increase it as far as practicable; but it should never be forgotten that it is at best a secondary perfection, a secondary element of social prosperity, and every true lover of his country's weal should know, that so far is material progress from being its chief requisite, that it is not even a secondary element of prosperity, save insomuch as it is subservient to the primary, essential element, social honesty. Material civilization, by wealth, ease and comfort, is apt to corrupt and debase the members by fostering the vilest passions of the human heart; and, to counteract this ruinous tendency, the material civilization of a society must be based on the moral civilization. If a society, ignoring its nobler end, looks to material progress as its essential object, it will inevitably, sooner or later, fall into irretrievable ruin. When social honesty is gone, material progress is an injury rather than a benefit; it only affords greater means for wrong doing; it is as knowledge to a villian, or as deadly weapons placed in the hands of a maniac, productive only of the greatest mischief.

The pages of the world's history are filled with the recital of the fall of nations eminent in material civilization, but almost wholly destitute of social honesty. Turn your eyes backward in imagination and contemplate the career of the mighiest nations of antiquity as they are brought in rapid review before you. Consider the georgeous civilization of Nineveh and Babylon, their military glow, their commercial wealth, their architectural grandeur, their great progress in many arts and sciences, the lore of the Chaldean sages; gaze on Egypt the mother of many arts with her Memphis and Alexandria and Hundred-gated Thebes, with her disciplined and valorous armies, with her gigantic temples and obelisks whitening the Egyptian plain; glance at the wide extended territory and almost incredible wealth and resources of the Persian empire; conjure up before your minds the splendid civilization of Greece in the time of Pericles, and of Rome under Augustus; their national opulence, the world-tamed triumphs of their armies, the marvellous perfection attained in poetry, eloquence, sculpture and architecture. Surely, if material civilization had in itself any efficacy to increase and perpetuate social prosperity, it must have been exhibited in those nations where it reached a high degree of perfection. But what are the facts? We know that all their material advancement could not save them from destruction. Nay more, as in ourselves when not guided by reason, the forces with which nature has endowed us for good purposes become the instruments of our perdition, so the perfection of material, civilization when not regulated by honesty, tends to drag the state more rapidly into ruin. It is indeed a striking historical fact, that nearly all those great nations of antiquity perished when their material prosperity was at its highest, for it was then that they were most corrupt. They were rotten to the very core and could not subsist. What now remains of all their grandeur and greatness? They have passed out as meteors from among the nations, Noisome pools occupy the site of the once proud Babylon. A mound of red earth is all that is left of the great tower of Babel. The gorgeous palaces of Nabuchadnezor and Sardanapalus, and the marvellous hanging gardens of Semiramis have crumbled into dust. The place has become, in truth, "the abomination of desolation." The ruins of Luxor and Karnak are melancholy monuments to the departed glory of Egypt, and the lonely columns of Chilminar mark the place where, in Persia's palmy days, the rays of the noonday sun were thrown back in undimished splendor from the golden roofed palaces of Persepolis. The puissance of the Roman arms lives only in story; the warriors of Hellas no longer inspire terror—her glory is a thing of the past. These mighty nations bore and developed within themselves the seeds of dismemberment and destruction, which in time could not fail to produce their legitimate fruits; and they perished, as must every nation that neglects its nobler for its secondary perfection, which seeks material civilization at the expense of moral civilization.

Istory presents a single splendid example of a society which has withstood the impetus of every hostile power. The society is Christianity. Even from a purely historical point of view, Christianity exhibits to us a society, which, from its origin to the present time—nearly twenty centuries—though constantly assailed by the greatest forces every directed against a society, has triumphed over them all; for the Christians in every age have firmly adhered to their principles. They preserved their unity with the greatest heroism, sacrificing millions of lives rather than yield up their principles; and this society still exists flourishes in a green old age, and boasts over two hundred millions of souls.

Now to bring the question more directly home to ourselves: Are we in such a state of high moral perfection? Are we, citizens of this golden State, possessed of this sound prosperity? Do we in our individual spheres, show ourselves to be actuated by those principles which, we have seen, are alone capable of procuring social prosperity? Does domestic peace have here its favored seat, undisturbed by matrimonial dissensions or by the indiscretions or crimes of one member or another of the family circle? Does our society in general regulate its actions by the guiding star of social honesty? Are its laws always such as to procure the real good of the people, and when made, are they carried out with that promptness and vigor which alone can render them efficient? In our elections, is our suffrage directed by an honest wish to fill our offices with the candidates whom we deem most reliable and best qualified to discharge the duties of their respective stations, or is our choice influenced solely by a desire to promote the interests of a party, and for this end do we unscrupulously raise our voices in favor of men whom we know to be untrustworthy—men whom in our hearts we thoroughly despise, and thus drag our reason in the dust before the hydra party-spirit? Is crime met inevitably, and in every case, with well considered penalties? Are our courts always and entirely proof against the insidious influences of wealth and social rank, meting out their judgments alike to the powerful and the weak? If we can return an affirmative answer to all these queries, we have indeed great cause for great rejoicing. If we must say "nay" to many, if not all of them, certainly we must confess that there is still ample room for improvement; that there is much still to be done before we can boast ourselves possessed of that substantial prosperity. Yet the perfection I have extolled is neither unapproachable nor unattainable. We can reach it if we really desire it. But our desire must not be an empty one, but accompanied by a correspondingly earnest and well directed action. The way is clear; the direction to the goal of all our wishes stretches out straight before us. The road is rugged and ascending; requiring some effort, but the prize we seek is well worth the labor. With ourselves rests our social as well as our individual destiny. With us it rests to undermine or destroy the social fabric by our folly, or to establish it firmly in a prosperity founded on a rock that cannot be subverted or shaken—a prosperity substantial, glorious, perfect.

A GREAT WORK.

Many a discouraged mother folds her tired hands at night, and feels as if she had, after all, done nothing, although she has not spent an idle moment since she rose. Is it nothing that your little helpless children have had some one to come to with all their childish griefs and joys? Is it nothing that your husband feels "safe" when he is away to his business, because your careful hands directs every thing at home? Is it nothing, when his business is over, that he has the blessed refuge of home which you have that day done your best to brighten and refine? O, weary, faithful mother, you little know your power when you say "I have done nothing." There is a book in which a fairer record than this is written over against your name.

J. W. MEYER. CHRISTIAN SCHREIBER.

CHR. SCHREIBER & CO.,

REMOVAL.

CHR. SCHREIBER & CO.,

Have removed their business from Market Street to their large and spacious manufactory, North East Corner of

Main and Mission Streets,

SAN FRANCISCO.

Having one of the Largest Furniture Manufactories in the State, with all the late improvements in machinery, we have now unequalled facilities for manufacturing everything in our line, and compete successfully with the Eastern Market, and shall henceforth give all our time and attention to the manufacturing our class of Furniture to meet the largely increased wants of our trade. We can sell our

FURNITURE AT NEW YORK COST

WHOLESALE AND RETAIL.

GRAY'S MUSIC STORE,

Musical Merchandise of every Description.

THE RECENTLY INTRODUCED

BURDETT ORGAN.

The manufacturers of the BURDETT ORGANS have succeeded in producing an instrument which may in a manner be compared to an orchestra, containing a variety of tones richly veiled. The stops in this make not only add to the power of the organ, but give a perfect imitation of different instruments, so that a simple melody may be repeated a number of times and the interest of the listener will be increased. It is with pleasure we acknowledge the flattering testimonials we have received from leading organists in California among whom may be named

MR. GEO. T. LEACH, Organist of the Church of the Advent, Howard Street, S. F.
MR. SAM'L D. MAYER, Organist of St. John's Church, Oakland.
MR. H. M. BOSWORTH, Organist of Calvary Church, S. F.
MR. J. W. U. HUND, Organist of Howard St. M. E. Church, S. F.
MR. R. J. McQADE, Organist of St. Francis Church, S. F.
MR. J. H. DOHRMANN, Organist of St. Patrick's Church, S. F.
MR. CHAS. H. HOFFMAN, Organist of the Mason Street Synagogue
MR. J. MULLER, Organist of St. Ignatius' Church, S. F.
MR. GEO. SCHUCKE, Organist of the Methodist Church, San Jose.
MR. EVERETT POMEROY, Organist of the Presbyterian Church, San Jose.
MR. F. WM. GABRIEL, Organist of Trinity Church, San Jose.
MR. J. W. FARNDLEY, Professor of Music, St. Augustine's College, Benicia.
MR. LOUIS HECKMANN, Organist at the Unitarian Church, Geary Street, S. F.
MR. JAS. R. LAWRIE, Professor of Music, Santa Clara.
MR. DAVID H. BERLIN, Teacher of Music, Stockton.
MR. WM. CARMICHAEL, Organist St. Mary's Church, Stockton.

Our prices range from $125.00 to $600.00 in U. S. Currency, our arrangements being such that we supply our wholesale and retail customers in San Francisco without advance for freight from the factory at Chicago. The makers are convinced that they will be better paid in the end by selling a first class organ at a fair price, than an uncertain one at an astonishingly low price. We will sell organs, melodeons and pianos on time payments to responsible buyers.

Address for terms, circulars, etc.,

MILLS' SEMINARY.

REV. C. T. MILLS AND WIFE, FOR THE PAST six years Principles of the Young Ladies' Seminary at BENICIA, are happy to announce to their patrons and friends that the next term of their well-known Institution will open

Wednesday, Aug. 2d,

In their NEW, COMMODIOUS AND BEAUTIFUL BUILDING just completed at

SEMINARY PARK, BROOKLYN.

As most of the able and experienced corps of teachers, with valuable accessions, as well as the fine classes of pupils now pursuing their studies, remove with them, the school remains essentially unchanged.

With greatly increased facilities for physical comfort and intellectual culture, and without additional expense, Mr. and Mrs. Mills believe they can accomplish much more for their pupils in the future, than they have been able to do in the past, and that their Institution offers unrivalled advantages for a thorough and finished education.

All communications relating to admission, and all letters of inquiry, should be addressed to

REV. C. T. MILLS, D. D.,
35.23 Brooklyn, Alameda county, California.

Santa Clara College, S. J.

SANTA CLARA, CAL.

Condnoted by the fathers of the Society of Jesus

THE TWENTY-FIRST ANNUAL SESSION OF THIS Institution will commence on MONDAY, August 7th, 1871.

TERMS—Tuition in the Classical and Scientific Departments; Boarding and Lodging; Washing and Mending of articles; School Stationery; Medical Attendance and Medicines; Fuel, Light, Baths, etc., per session of Ten Months, ... $250

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Maraschi, S. J., St. Ignatius Church, Market street, between Fourth and Fifth, San Francisco.

31-1 REV. A. VARSI, S. J. President.

Purchasers of Bees can have all information on this subject by applying at the FARMER OFFICE Terms liberal.

Miscellany.

TO MAKE MATS FROM SHEEPSKINS.

A fresh skin is more easily prepared than one a little dry. A strong soap-suds is used to wash the wool, first letting the water cool so as to be slightly warm to the hand. In the mean time, pick out all the dirt from the wool that will come out; then scrub it well on a washboard. A tablespoonful of kerosene added to three gallons of warm suds will greatly help the cleansing process. Wash in another suds, or until the wool looks white and clean. Then put the skin into cold water enough to cover it, and dissolve half a pound of salt and the same quantity of alum in three pints of boiling water; pour the mixture over the skin, and rinse it up and down in the water. Let it soak in the water twelve hours; then hang it over a fence or a line to drain. When well drained, stretch it on a board to dry, or nail it on the wall of the wood-house or barn, wool side toward the boards. When nearly dry, rub into the skin one ounce of powdered alum and saltpetre, (if the skin is large, double the quantity;) rub this in for an hour or so. To do this readily, the skin must be taken down and spread on a table or flat surface. Fold the skin sides together, and hang the mat away. Rub it every day for three days, or till perfectly dry. Scrape off the skin with a stick or a blunt knife till cleared of all impurities; then rub it with pumice-stone, or if more easily procured, rotten-stone will do. Trim it to a good shape, and you have an excellent door-mat. Any intelligent house-wife can dye it green, blue, or scarlet with the so called "Family Dyes," either in powder or liquid, and she will have as elegant a door-mat as she could desire.

Lambs' skins can be similarly prepared and made into caps and mittens. Dyed a handsome brown or black, they equal imported skins. Still-born lambs, or those who die very young, furnish very soft skins, which if properly prepared would make as handsome sacks, muffs, and tippets as the far famed Astrachan. Any farmer's daughter could easily prepare skins enough to furnish herself with a handsome suit.—*Mechanic and Inventor.*

SWEARING.

Of all bad habits, it would be difficult to name one that has less reason or provocation in it than that of using profane or vulgar language. When coolly viewed, the act of one human being calling violently on his Maker to deliver over his fellowman to condemnation is wicked in the extreme; it is a vain and irreverent use of his Maker's name and it is the expression of a hateful and infernal wish. But, leaving the wickedness of the habit out of the account, it is useless and irrational; it brings no pleasure, nor, comfort, nor relief. No swearer is ever the wiser, richer, or happier for his curses. He may curse his enemy for a lifetime, without turning one hair of his head white or black by the process. The language furnishes all the words and terms needed to give and strength and vigor to expression, without resorting to oaths and curses. All the words needed to express indignation and wrath, even are found in it. An oath does not give strength nor emphasis to the truthful man's yea; and all the oaths and maledictions that can be imagined cannot give an atom of strength to the liar's nay. Swearing is chiefly a habit; the oath which the well-bred man utters in a moment of passion of vexation may be overlooked, for it is perhaps, an accident; but for the foul volley of oaths and curses that the habitual swearer pours out in ordinary conversation, or on slight provocation, there is no shadow of excuse. They are a shame to himself, and a disgust to his acquaintances. Some men are such slaves of the vicious habit, that they swear without knowing it; they converse in a dialect of oaths. They would be disgusted themselves if they could see one of their simple conversations taken down in short and put in print, with coarse oaths bristling all along the line of their remarks. Profanity and vulgarity do not always go together, but they are apt to. The swearer is in danger of becoming vulgar, and the vulgar man is almost invariably a swearer. When both habits meet in the same individual, they make him intensely offensive to all pure-minded people. It is imagined by some that an occasional oath or a little vulgarity gives spice and flavor to conversation; but if it does, it is a very offensive flavor. There is nothing more charming than chaste and simple language, and it is worth any man's while to cultivate the habit of using it. An oath would not be considered a flavor to the conversation of a modest and beautiful maiden; neither can it be justly held to add to the piquancy of the conversation of a man.

WHY HE DIDN'T DRINK.

"O, poh! now; what a spooney you are, Jack! Beer won't hurt anybody! Who ever got drunk on beer?"

"O, yes; I know," said John, "but I don't want to be pickled and soaked in beer. Besides, I've signed the pledge."

"O, Jack, what a fool!" interrupted his companion.

Now John did not like to be called a fool, but he kept quiet and said, "Shall I tell you why?"

"I suppose some of these temperance folks have got after you."

"No, not exactly that; but my father died a drunkard, and I signed the pledge over his coffin with my poor broken-hearted mother. Do you wonder I never drink?"

A Family of Suicides.

At the inquest of the body of a man who committed suicide recently in St. Louis, the fact was developed that he had attempted to hang himself five months before, but was cut down by his wife, and that he was the last of a family of six brothers and sisters, all of whom died by their own hands.—*Philadelphia Medical Times.*

Valuable Stock Ranch

FOR SALE—A BARGAIN.

A Large and Valuable and well located Ranch of FOUR THOUSAND ACRES, all fine level land, and well adapted for Wheat and Grain growing or pasturage of Stock, here, even in this dry season the feed is good, and animals upon it are now doing well

There is now on the Ranch 3500 Sheep, four Horses, four Cows and Heifers, together with Wagons, Plows and every Farming Implement needed to carry on the Ranch.

The Ranch is situated 23 miles south of the New Town, recently located by the San Joaquin Valley R. R. Co., on Bear Creek, directly on the line of the Railroad. The work between said New town and Modesto is rapidly approaching completion and Cars will be running to Bear Creek in thirty days.

There is upon the Ranch a Good House, Barn, Wells of Water, all fenced in. The Ranch, with all improvements, will be sold at a VERY GREAT BARGAIN as the owner desires to change his location, having other business to attend to.

The Sheep will be leased on shares as agreed upon

The terms of Sale will be ONE-THIRD Cash, balance one and two years, interest at 10 per cent. per annum

To any person who desires to engage in STOCK-RAISING or GENERAL FARMING, this is an opportunity rarely to be found. Early application will secure a great bargain, as the whole will be sold at the nominal value of unimproved lands.

For Particulars Address,
C. W. STEVENS, Proprietor, on the Ranch,

320 Clay Street San Francisco.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attach es to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry: thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

San Francisco, August 24th.

Money and Exchange Table.

Exchange on England	109½@109¾
Price of Gold	112⅛
Value of Greenbacks	89@89½
Value of Wheat in Liverpool	11s. 9d.
do do New York	145@160 bush

Price of Money in Eastern Cities.

New York—Money very abundant and rates as low as 2@3 per cent. per annum on call, at 4@6 on time paper.

Boston—Money very plenty, 3@5 per cent. on call, 6@8 on

Chicago—Money capital employed 4@6 per cent. on call, 8@8 on time.

Money in England.

Bank of England rates 2 to 2½ per cent, heavy supplies, money very easy in business circles.

Money in France.

Money in the form of Gold is now showing very abundantly, the people among the lower classes offering Government all it wants to pay the Prussian Indemnity.

GRAIN AND FLOUR MARKET.

The Grain and Flour market presents quite a contrast to former years, the amount of Wheat coming in being far less than usual, as our farmers seem disposed to hold on, and what is marketed is for milling purposes for home use and the China trade which is now assuming vast importance, which in coming years will tell in immense shipments, the amount this year, July to July, being nearly twenty times as much as last year. The amount of wheat sent abroad this year being only about one-quarter the amount of last year thus far, while Flour is nearly as much.

Barley and Oats are in demand, and the high rates demanded for Barley is now shutting up distilleries.

Corn, Potatoes and Onions plenty, Corn is being more extensively grown all over our State, and the quality is very superior too, prices of each, however, are less this week.

Hops are in large demand, and the prices rapidly advancing, and Eastern buyers are after all we grow.

The Hay and Feed Grains are less for the former and firm for the latter.

Cosmopolitan Hotel,

San Francisco,

CHANGE OF PROPRIETORSHIP.

H. H. PEARSON,

Late of the Russ House,

Having bought the interest of Messrs. Tubbs & Patten, of the Cosmopolitan Hotel, has secured a lease for a term of years of this well known and elegantly furnished Hotel. His previous reputation assures it being kept in first class style, while in order to keep pace with the times he intends to make important reductions in the scale of charges. His intention is to make it a family and business house, while his large connection with the traveling public warrants him in expecting a large amount of country, Pacific coast and Eastern patronage.

The prices will range from two to three dollars a day for ordinary accommodation Board by the week or month as per contract. The table will be kept on the most liberal scale and many improvements introduced. The spacious reading room is the finest of its kind in the city, while the furniture and fittings generally are superior to those of any hotel in San Francisco. The house will be thoroughly overhauled

Mr. PEARSON assumes proprietorship this day, August 1st. 366

Every Thursday and Mailed Friday's at $4.00 per year in advance, when payments are delayed $1 will be added.

REDUCTION IN PRICE

IN

Liberal Club List

With a desire to place the CALIFORNIA FARMER in every family on this Coast we have concluded to make a

Liberal Reduction in Price,

and to place it at such a sum as that every Cultivator of the soil could have it.

We have announced the Terms in another column, and here we give additional inducements to our patrons and friends to not only subscribe for the Farmer, but to secure other valuable Publications at a moderate price also.

We make this announcement for the express purpose of meeting the wants of a large increasing Agricultural population, and a large emigration that will soon be coming to our shores, who need the information of our resources, and we feel we can serve our State in no better way than to give to these new comers the

CALIFORNIA FARMER

at a very reasonable sum, so that every family can have a copy.

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar,	$13,50.
The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid	$7,50.
The CALIFORNIA FARMER and the New York Weekly Tribune,	$5,50.
The CALIFORNIA FARMER and the American Agriculturist,	$5,00
The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life,"	$6,00,
The CALIFORNIA FARMER and the Phrenological Journal of New York now in its 50th Volume,	$6,00.
The CALIFORNIA FARMER and the American Stock Journal,	$5,00.
The CALIFORNIA FARMER and the Overland Monthly,	$7,00.
The CALIFORNIA FARMER, and the Atlantic Monthly,	$7,00.

WHAT SHALL BE DONE WITH WEEDS?

Certainly, not pulled and left upon the ground, *if their seeds are only formed.* It is not safe at this stage of their growth to throw them into the hog-yard, or to put them in a heap with manure. Nor will it be safe to leave them upon the ground where they grow. Some of them are so tenacious of life, that, even if the plant be pulled up, it is said that the sap will flow upward, the flower will bloom, and the seeds ripen to be scattered over the fields the next year. There is no killing them by gentle means. They will live three feet under ground for years, and if the land is again stirred to that depth, up will spring a thick crop of weeds, again to flourish in the full strength. We have seen a stout pigweed pulled entirely out of the ground, with the exception of the end of a very small root, not only to go on and live, but to blossom and perfect a large crop of seed! Do not trust them in any position, where a complete decomposition will not speedily take place, either by fire or the agency of some strong alkaline or other substance.

If dried on the ground after the seed is formed, there will be danger. If thrown into heaps, they will not be likely to rot before some of them have perfected seed. If thrown to swine, a portion of them would be left to go on with their work of maturing seed, and as it would be if they were mingled with manure. They cannot well be burnt in their green state, so that the safe and economical course is to throw them into a compact heap, and mingle them with quick-lime, or wood ashes to keep them moist so that they become thoroughly heated and decomposed. Even then, the mass should lie exposed to the sun and air until quite certain that the vitality of the seeds is destroyed. *New England Farmer.*

HOW TO KILL WEEDS.

We have at various times given the most approved modes of killing weeds. Prof. Daniel C. Eaton, a very celebrated botanist of New Haven, recently gave a lecture to a school of young ladies and thus spoke on the same subject: "He said one way was to pull them up with the fingers; but that was hard on the fingers and on the knees and when you ceased operations for dinner, or to get a glass of water, you found that you were tired, and had really killed but few weeds. They could be hoed up, and raked up. And really the surest way to kill them was to pull them up, to hoe them up, to rake them up, and burn them up. On the whole, however, Henry Ward Beecher's method was perhaps the most effectual. Mr. Beecher was a great preacher and a good man; and he ought to know, if any one did, how to kill weeds. His plan was to rake carefully around the weed, to pick off the insects from it, to water it on dry days in the summer, and in the autumn to transplant it carefully into a spot, and remove it to the house, there to be tenderly watched. This treatment was sure to kill any plant upon which he had tried it, and he thought it ought to kill weeds if anything would.

OVERLAND MONTHLY.

We have the September number, it keeps up its high repute, and continues to win favor.

WHEAT MARKET OF NEW YORK.

August 17.

The wheat market has become stronger during the past week, caused by the light receipts from the interior and the slight abatement in freights to Europe, also to the lower prices ruling in Chicago where the speculators had been cornered and were obliged to sell to realize on contracts. But the rise in prices of shipped grades tended to restrict that department of business, notwithstanding which the market closed strong at an advance of 2@3 cents on spring with a strong speculative feeling. Winter growths do not generally share in the improvement, though choice old amber is slightly dearer, being scarce. The prospects of the harvests in Europe are fair for a good yield, which will reduce the demand on this country to supply the deficiency. Rye is steady with a fair business doing. Barley malt is inactive with prices in favor of the buyer. The corn market has been active, and prices have improved, the export demand being stimulated by the lower ruling of freights and the slight advance in the price of gold at the close of the week. Oats have declined materially, which has caused an increased demand, and a fair business at the close; beans continue firm. Peas are unchanged in demand and price. We quote:

Wheat, White Genesee, ₱ bush.	$1 45 to $1 50
Wheat, White California,	nominal
Wheat, Southern white, old & new,	$1 40 to $1 50
Wheat, Michigan white,	1 40 to 1 50
Wheat, Missouri white,	1 45 to 1 50

THE CHICAGO GRAIN MARKET.

Wheat—The market has been operated upon largely by speculators during the past week, and has been very unsettled at irregular prices, though on each day there has been a material advance in values—an advance of 9@10c having taken place since the close of our last. The market at the close was unsettled, but at a material improvement in prices, influenced mainly by the large speculative demand, though Eastern advices were also more favorable. Liverpool was reported 1d lower, which had however, had but a temporary influence upon prices.

Flour—Transactions during the past week have been limited, and prices steadier and in some instances higher, though sales have been too meagre to fully establish a market, as most of the sales have consisted of small odd lots, which gave a very poor idea of the actual improvement in values.

Barley—The market for all grades has ruled firm and active during the week, Central receipts being in the best demand and commanded outside prices.

Oats—There has been an active demand for No. 2 during the greater part of the week, the inquiry being chiefly on shipping account, though a moderate business has been done on speculative account.

Corn—Early in the week the market ruled dull and weak, and prices subject to daily reductions. Advices from New York and Liverpool were unfavorable, and shippers were opposed to paying the advance in freights demanded by carriers.

SPECIAL FARMING.

Many of the complaints made that farming does not pay are founded on the fact that some particular crop has been raised to the exclusion of others, and a failure has resulted disastrously. In mixed farming this cannot occur. A successful farmer will tell you the secret of his success. He has always something to sell. In the winter time, he has grain of all sorts, wool and mutton; in the spring, he has some fine cattle or a fresh cow; some fat calves during summer, and at any time, if one should want a horse, he will have one to spare, having always a colt to put in its place. Thus money is all the time dropping into his purse, and though the items may be small, the aggregate is considerable, while he has abundance for his domestic supply without having to purchase. Contrast this with the hop-raiser, the cotton grower, the fruit culturist, and all others who limit themselves to a special product. They may handle more money in a year, but how little of it sticks to their fingers! They handle it out as trustees for others, and sometimes a failure will prevent them handling sufficient for their pressing needs.—*Farmers Union.*

INFLUENCE OF TEMPERATURE ON SEEDS.

On the 5th of April I planted two rows of the Eugenie close together. The seed on one row was kept during winter in a warm room, that of the other in an empty stable, perfectly dry, but exposed to the severe cold. Previous to the cold, both seeds were in the same pot. Now the peas in the row which had been kept in the warm room all came up very vigorously, while in the other row only a small part came up and these look very weakly. There must have been some influence of the temperature on the seeds while laying in a dormant state.—*William Salter, in Gardener's Monthly.*

SINGULAR DISEASE AMONG COWS.

The Kansas City *Times* mentions a singular blindness affecting the milch cow in Jackson county: "In Independence there are 30 or 40—some of them the finest kind of animals—that have completely lost their sight, and are now wandering about in pitiful helplessness. In Westport the disease is spreading rapidly. Along down the line of the Memphis and Kansas City railroad the epidemic is raging, and in Blue, Salisbar and Lone Jack townships the reports come up very gloomily of the ravages of the strange affliction. In Kansas City there are not less than 200 blind cows. Some of the dairies have had, in the last week, 15 blind milkers at one time. The eyes begin to swell a little, lasting, generally, from five days to two weeks. As soon as the swelling commences the eyes also begin to run clear water, just as though some hard and foreign substance was beneath the lids. After the running ceases, a hard white film covers the eye-balls, completely destroying the sight. This disease does not seem to affect the general health of the cow. Her appetite is as good as ever. There appears to be no change either in the quality or quantity of the milk, no pain, no uneasiness of any kind, no peculiar heat indicating fever, and indeed, no symptom that would indicate disease. The eyes alone suffer and are destroyed.

SETTING MILK IN DEEP VESSELS.

In the *American Agriculturist* for August, Col. Waring, of Ogden Farm, who has a dairy of Jersey cows, gives a report of a month's trial of setting milk for cream in deep vessels—tin cans, 17 inches deep, 11½ inches in diameter. These are set in water. He is much pleased with the result, thinking he gets fully as much cream, and makes as much butter, the skimming is done much more quickly, a dipper being used; the saving of labor in care of the vessels is great, six cans being used instead of about 180 shallow pans; the cream is of uniform consistency and much more liquid than when so much of it is exposed to the air; the "marbling" of the butter, before common has now disappeared; the cream mixes at once and thoroughly in the cream pail, instead of being lumpy as before. The tin cans we have seen in use in the West were about 18 inches deep between seven and eight inches in diameter. The evidence is very strong that the use of such vessels has several advantages over the use of the shallow pans, and no disadvantages—always provided they can be set in cool water, or otherwise quickly cooled.

[This is worth the special attention of our Dairymen.—ED. F.]

BIRDS THE FARMERS' FRIENDS.

Some persons do not weigh the good against the bad in the condemnation they pronounce upon the little servants who wait so assiduously upon them. There are would-be-wise people among us who say, "Why, they are only birds. We can not attend to them except to destroy them. Let us plow and sow and reap, and market our produce, and leave trifles like these alone." Ah! but they are not trifles. These are active industrious helpers of the intelligent agriculturist. Many a bright pound finds its way into his pocket which, but for their unrequited labor, which would never get there. It would be fruitless to attempt to appraise their labors at a money value. No money could buy services like theirs. The sharpest of human fingers would bungle the work, indeed, beside these persevering and laborious toilers.—*North of England Farmer.*

SUCCESS OF NATIVE VINICULTURE.

It gives us pleasure at all times to be able to record the prosperity of our native wine growers, and wine companies, and it is with satisfaction we are enabled to inform our readers, that the Sandusky Wine Company, of Sandusky, Ohio, has declared an annual dividend of 15 per cent. This shows an extraordinary degree of prosperity which is highly gratifying. The stockholders of this company are all grape growers, and state, it is their earnest effort to produce the best wine of the West. The affairs of the company are at present presided over by Mr. Otto Kromer, President and Mr. F. Brennecke, Secretary; both of whom are residents of Sandusky.

[*New York Wine and Fruit Reporter.*

STEAM PLOW.

An Exchange Reports:

A steam plow, built at the great locomotive works in Patterson, N. J., has been successfully introduced on the great Wells farm in Minnesota. Four breaking plows on a public trial were hitched to the motor which, effectually did its work by pulling them through the sod. The plows turned the turf at the rate of about 40 acres per day. The machine is said to be capable of drawing ten loaded wagons over a ordinary road as rapidly and safely as the same could be done with ten pairs of horses. It was invented by A. Mr. Thompson of Edinburgh, Scotland, and has been patented in Great Britain and America.

THE SWALLOWS STRATAGEM.

One morning there was a great commotion among the swallows under our shed. The old birds, having come to the conclusion that it was time for their little ones to leave the nest, were flying back and forth, uttering cries of encouragement to the birdlings, who were perched tremblingly on the edge of the nest, admiring the ease and freedom with which they flew about, and wishing to soar away, yet not daring to trust themselves on their untried wings, and, cuddling down into the nest, they peeped helplessly. Finally, the old birds called their neighbors from the barn, who came, three or four of them, and with their advice sought to entice the birdies forth.

Finding persuasions of no avail with the cowardly babies, they resorted the strategy. All day long they were busy flying back and forth, bringing bits of straw and mud in their mouths, and working away on the nest. What they were doing I could not imagine, and the young birds seemed as much puzzled as myself. But pretty soon I saw what they were up to. They were building a piazza around their nest.

The next forenoon, the structure being completed, they invited the children down there. O yes! they had as lief hop down there as not; but when once down they knew not how to get back to the nest, and felt that they might as well fly as remain there, where they were in constant danger of falling; so yielding to the entreaties of the old ones, who were circling about showing them how easy it was, they plucked new courage and fluttered down safely on the fence, wood-pile, and one on an axle-handle. And great was the rejoicing among the birds at the success of their manœuvre. *S. S. Gazette.*

THRESHING WHEAT.

It is very desirable for farmers to thresh out their wheat at the earliest possible moment, and then when farmers are in debt they should at least market it without delay. Some of our State papers favor an early market at all times. Last season, had this rule been carried out the farmers would have lost large sums of money. While this rule is most always correct, there is occasionally an exception. Perhaps last year was one of these exceptions. There is a time for all things, and an early market for the grain may come in under this old adage. It is certainly worth something to have the care and anxiety of the threshed crop off ones hands, and the loss and shrinkage is a very considerable item, but at all events no one disagrees with the idea of threshing out the grain as early as possible. In the Northwest where the barns are scarce and where the grain is mostly all secured in stacks, early threshing is particularly desirable. The storms in autumn frequently make sad work of grain. It matters not how thoroughly it may be stacked great damage is frequently the result of one of our heavy storms, and the quicker the grain is threshed the better it is for the farmer.—*The Farmers Union* (Minneapolis, Minn.)

BEST TIME FOR PAINTING HOUSES.

The best time for painting the exterior of buildings is late in autumn, or during the winter. Paint then applied will endure twice as long as when applied in early summer or in hot weather. In the former it dries slowly and becomes very hard, like a glazed surface, not easily affected afterwards by the weather, or worn off by the beating of storms. But in very hot weather the oil in the paint soaks into the wood at once, as into a sponge, leaving the lead nearly dry and nearly ready to crumble off. The last difficulty, however, might in a measure be guarded against, though at an increased expense, by first going over the surface with raw oil. By painting in cold weather, one annoyance might certainly be escaped; namely the collection of small flies on the fresh paint.—*The Zoologist.*

BROOM CORN FOR CATTLE.

Unquestionably, the best way to dispose of broom corn seed is to be feed it to the fowls. The next best mode is to give it to sheep; they are fond of it, and fatten upon it nearly as fast as on Indian corn. Ground with corn, rye, oats or barley, it is profusely fed to cattle, and when mixed with wheat bran it is good for milch cows. The Shakers frequently feed it to horses, and at the season of the year when this grain is not only abundant, but at hand, they use it exclusively. My judgment is that with corn at 90 cents, oats 48 cents, and rye 80 cents, for grinding and feeding to cattle, broom corn seed is worth between 50 and 60 cents a bushel, although it would be more valuable to dispose of in some other way.—*Am Ins Farmers' Club.*

They have in China what is known as the grease tree. Large forests grow there, and the Oleaginous product has become an article of traffic. The grease forms an excellent tallow, burning with a clear, brilliant and—what is infinitely more to the purpose—white light, at the same time emitting not a trace of any unpleasant odor, or of the ordinary disagreeable accompaniment of combustion—smoke.

THE FAIR SEASON.

The season of Agricultural Fairs, Cattle Shows, and Races is now in full force, and will be the theme of talk and attention in all parts of our State despite the excitement of the Political Cauldron which now boils fiercely, and at many of our Fairs Politicians will organize Public Meetings in order to get at the great masses that are gathered there, and upon whom each party will desire to make an impression.

If *Politicians* are thus active to get at the masses of our people to make an impression and win converts to their cause, why should not *Agriculturists* gather the masses and hold meetings for discussing all the important questions touching *their own great Interests*, certainly as vital as their procuring success for any other matter they could attend to.

It is certainly to be regretted that at the "State Fair" and at all of our "County Fairs" the Managers do not rally Farmers, Stock-men, Orchardist, Vine-growers and all interested to assemble for the discussion of matters tending to their own prosperity. This matter should not be neglected.

GRAND PRIZES IN HORTICULTURE.

1. The Virginia Pomological and Horticultural Society offer One Hundred and Fifty Dollars.

2. Ellwanger & Barry, of Rochester, New York, offer Fifty Dollars for the largest and best collection of Apples, not less than fifty varieties, three specimens of each.

3. Marshall P. Wilder, of Boston, Mass., offers Fifty Dollars for the largest and best collection of Pears, not less than fifty varieties, three specimens each.

4. Charles Downing, of Newburgh, New York, offers Fifty Dollars for the largest and best collection of American Grapes, not less than twenty varieties, three bunches each.

5. Thomas P. James, of Philadelphia, Pa., offers Thirty Dollars for the largest and best collection of Peaches, not less than ten varieties, of six specimens each.

6. Gen'l R. L. Page, Norfolk, Va., offers Ten Dollars or a Medal for best half bushel of the Flowers Grape.

7. G. F. B. Leighton, Norfolk, Va., offers Twenty Dollars or a Medal, at the disposition of the American Pomological Society.

8. O. D. Barbot, Norfolk, Va., offers Twenty Dollars or a Medal for the best dozen bottles of Scuppernong Wine.

9. L. Barkley, Norfolk, Va., offers Ten Dollars or a Medal for the best dozen bottles of the Flowers Grape Wine.

10. W. H. C. Lovett, Norfolk, Va., offers Ten Dollars or a Medal for best Dried Figs,—cured within the territory of the Society.

11. Hon. Jno. B. Whitehead, Norfolk, Va., offers Twenty Dollars or a Medal for best half bushel of Scuppernong Grapes.

12. W. S. Butt, Norfolk, Va., Two Premiums of Five Dollars each or Medals, one for the best Figs; the other at the disposal of the Society.

SALE OF FARMS.

The prices of improved farms in this State rule lower than they did three years ago. Within a few days past two large farms, one of 800 acres and the other of 1,000 acres, situated in the Napa Valley, between St. Helena and Calistoga, were sold at prices ranging from $30 to $32 per acre. This is certainly a very moderate price for good farming lands in one of the most desirable location in the State. But 30 or 40 miles farther north the prices of very good lands drop down to from $10 to $12 an acre. Sonoma, Napa, Lake, Mendocino counties have suffered very little from the drought this year. Through this whole region the crops are quite as certain in a dry season as in a wet one. Including Humboldt county with the others named, there is room for 50,000 more prosperous agriculturists and mechanics; and then there would remain a great many blank spaces to be filled.—*People's Journal, Calistoga.*

THE CATTLE DISEASE.

A terribly fatal disease is now raging among the cattle in some portions of Illinois. Over one hundred head have fallen victims to it within the past few days. It usually kills in a few hours. No premonitory warnings are given, and although the skill in possession of ordinary practioners has been brought to bear upon it, it yields to no remedy or treatment, and is fatal in every instance. Its name and nature have not yet been determined.

OCCIDENTAL HOTEL.

This well known and very popular Hotel now under the Proprietorship of H. H. Pearson, Esq., is winning Golden favors, great and valuable improvements was made in the Hotel on the entrance of Mr. Pearson as Proprietor, and now by his excellent management, and the satisfactory rates of the Hotel, and its excellent management, it has become one of the most popular on the Coast.

Agriculture.

PLOWED GROUND A SOURCE OF HEALTH.

The plow, harrow and hoe, according to recent discoveries in science, contribute more to the health of the country at large than all the human sanitary arrangements combined. Recent investigations have proved that the deodorizing powers of fresh earth make it the best disinfectant ever discovered. As this is true, does it not present the design of Providence in a striking and beautiful light? In the winter, when the air is purest and needs no purifier, farmers would, if they could, do their plowing, but wet weather, freezing and snow forbid. In the spring and fall, however, when the atmosphere is most charged with miasmas and other poisonous gases, man is compelled to plow. This is not all that is good and beneficent in the arrangement. This poison which the earth extracts from the air is a fertilizer, and returns in the form of wholesome food for man's subsistence.

It is hard to conceive, if it were not for the fact that fresh earth is a purifier of the atmosphere, that man could not exist on the earth; for it is the decay of vegetable matter which chiefly poisons it, and were there not some antidote the health of the country would not be as good as it is in the cities.

Epidemics and infectious diseases, which sometimes almost depopulate cities, rarely reach far into the country, because the antidote or corrective of the infective atmosphere is there; but in cities, where there is no earth, either fresh or otherwise, disease does its work without opposition. We might multiply proof of this theory, or rather important fact, to an unlimited extent; but one or two illustrations are enough for the thinking mind.

About ninety years ago, a part of the valley of Virginia, which is now considered the abode of health, the people of lower Virginia looked upon it as a graveyard. But the fertility of the soil and beauty of the country caused men to take their chances, and in a few years after the plow commenced its work, the health of the country improved, and just in proportion to the increase of cultivation was health established.

There are now persons thirty years of age living there, who never saw a case of chill, and who look upon them as something terrible, found only on the water-courses of lower Virginia. This fact of new countries being unhealthy, and health making its appearance with the plow, is also strikingly illustrated in the case of Mississippi and other Southern States.

All elderly persons now living know that these Southern States, when first settled, were looked upon in the same light that the lower Virginians formerly looked upon the valley; and all who know the health of those regions has improved so much in later years that the subject is rarely ever referred to. At first, it was the only objection to the removal to the South, but now it is not longer an obstacle.

The truth is, God has so arranged it, and so merciful is the plan, when we contemplate the fact that through the plow we receive both our food and health, we can but exclaim:

"Deep in the unfathomable mines
Of never-failing skill,
God treasures up his great designs,
And works his sovereign will."

RICH.

An Exchange says:

"A farmer ought to be satisfied with working his hired help the same number of hours that he works his team, and not want them to chop wood or do other jobs that ought to be done in winter, or when the land is not fit to work; but most farmers think that they are not getting their money's worth if their man is not either at work or in bed. And another thing, we think boys ought not to work as many hours as men. They get tired out and disgusted."

This is a negative declaration that Agricultural employers have more consideration for the health, strength and comfort of the dumb animals which perform their drudgery than for their laboring brothers. It is time that the rights of labor were better understood by those who create the wealth of the country.

MILKING COWS.

It used to be said, where we was born and brought up, away down East, that a good healthy buxom maid, one who was good natured and cheerful, was the best hand that could be procured to milk cows. And why? Because they milk rapidly and cheerfully. They have a happy organization. They are at peace with the whole world, and they make the cows feel so too. Hence the result is more milk. Cows should be milked regularly—say at 5 P. M., and should always be treated gently—we may say tenderly—during milking time. They must be milked rapidly, and the last drop taken, if the full benefit is to be derived from the cows.

Good Mottoes for the Heart.

A mother's prayer will draw up from the depths of the sea.

A father's blessing cannot be drowned in water, nor consumed by fire.

A HANGING VASE.

I was delectating one day in the woods and finding on a dry hillside, pretty little tufts of bright green, silky grass, I could not leave them in peace and quiet in their home under the trees, but snatched them out of the soil in passing and putting them in my basket, carried them home with me, thinking their

"Simple beauty and rustic health"

would add a grace to our library window.

The grasses have made themselves quite at home under our "roof tree" and I notice have outgrown and outshone those they left behind them. We had out of use at the time we brought them in, a novel and very choice vase, the gift of a dear friend. It is like a large glass fruit dish, though without any base for a standard, the edge being returned outward forming a deep groove beneath it. Exactly fitting the outer surface of the glass vase, is another made of twisted, silvered wires, radiating from the central point below and terminating at equi-distant points in a ring of wire passing close under the grooves. Loops of the same wire connected with this ring bent out from under the groove and are joined to and make part of the links of the chain by which the whole is suspended.

Into this ornamental vase, I put my grasses with very little more of the wood soil than that clinging to the roots, and hung it up in the south end of a northeasterly bay window where it has plenty of shade. It was pretty at first but by only the care of a semi-weekly watering, the grasses have grown to twice their size when found, and have thrown out numerous flower stalks, some erect, others drooping, and they fill the dish to overflowing.

When these fade I know where I can get plenty more and I would like to furnish the baskets of all my friends who in their admiration for gorgeous exotics, do not forget to love the simple wild-wood grasses.

I have since noticed and admired greatly some of the bog and river grasses growing by the wayside and in the swamps and streams, so symmetrical are they in their abundant growth, so vividly green and so perfect in every blade even to the drooping tips, and I doubt not they will bear transferring to be highly ornamental in large vases in halls or on piazzas if well watered and shaded. At least, next time I visit their haunts I mean to bring one home with me to hang at the end of a shaded piazza in a large wooden bowl we have had fitted with a small iron chain, and painted like the house.

F. B. Johnson.

STAINS.

If you have been picking or handling any acid fruit and have stained your hands, wash them in clean water, wipe them lightly and while they are yet moist, strike a match and shut your hands around it so as to catch the smoke, and the stains will disappear.

If you have stained your muslin or gingham dress, or your white pants, with berries, before wetting the cloth with anything else, pour boiling water through the stains and they will disappear. Before fruit juice dries it can often be removed by cold water, using a sponge or towel, if necessary. Rubbing the fingers with the inside of the pairings of apples, will remove most of the stains caused by paring.

Ink also if it be washed out, or sopped up from the carpet, with cold water immediately when it is up filled, can be almost entirely removed.

Chemical Changes.

Linen can be converted into sugar; sugar into alcohol and carbonic acid; alcohol into ether and water. Sugar can also be converted into oxalic acid, and likewise into pure charcoal and water. Alcohol will readily change into acetic acid or vinegar. Coal tar is transformed into dyes that surpass the Tyrian purple of old. Starch may be transmuted into gum, alcohol, sugar vinegar, or oxalic acid; and these are but few of the magical changes which modern chemical science has made familiar as household words.

The Academy reviews a recent work by Peschel, a German geographer, who endeavors to refuse the idea that there are mountains and valleys in the sea-bed, similar to the rugged ups and downs of the land. It has been proved that every island is either the unsubmerged height of a sinking portion of the continent nearest to which it lies, identifiable as a former part of the mainland through its geological formation, its plants and animals, or to have been independently raised by volcanic forces or by the coral animal. Dr. Peschel also remarks that since the Tertiary period the continents have tended to add to their extent to the north and westward, while in the south and east of the present dry land there lies only the submerged and sinking portions. Yet, though the northern hemisphere has gained more land than it lost, and the southern has lost more than it has gained, the proportion of land and water surface has remained exactly the same

Advertise Liberally.

Make your business known widely if you wish to prosper. No business man can lead in his trade without a judicious use of and a liberal expenditure of means in advertising. This is fully proved by all large advertisers, who have paved the way to a Splendid Fortune by Advertising Liberally

Labor.

The theory that white men cannot endure the labor required to utilize the sugar and cotton crops do fair to be exploded. Experiments made by Southern planters who have imported laborers from the cold regions of Sweden, shows that Swedes do more work and suffer less sickness than native born blacks under the same condition.

"Through tickets to go round the world," are for sale in London at $1,250.

Price at the Farmer Office, $2 00; by mail or express, charges paid $2 50. Send orders to the Farmer Office.

Address WARREN & CO

BEE KEEPER'S DIRECTORY.

By J. S. HARBISON, Apiarian, Sacramento.

THIS BOOK HAS BEEN PREPARED by the Author with great care and the devotion of much time. From the experience of many years as an Apiarian, the Author has given results that must be of great value to all who have Bees. Every person who contemplates keeping of Bees should have this book, a volume of over 400 pages, fully illustrated, price only $2 50.

For Sale at the Farmer Office

WARREN & CO.

Sheaves of Grain.

As the present Season will offer many interesting and valuable samples of Grain of all kinds, we shall feel greatly indebted to our subscribers, and all interested in our Grain Crop, for Sample Sheaves of Wheat, Barley, Rye and Oats, and any other Samples of this year's products.

We will cheerfully repay them for their kindness and attention, will send them in return choice Seeds to more than the value, and also pay all expenses of transmission per Wells, Fargo & Co.

Cultivators in such cases can command our services for a full reciprocity.

Horse Hay Fork

IMPROVED.

Greatest Record in the History of Agricultural Implements.

Thirteen [13] First Premium during the Fall of 1869, at NINE different State Fairs, were awarded our unloading apparatus. NINE upon Roger's Original Harpoon Horse Hay Fork, Improved, and FOUR upon Nellis' Stacker, in addition, by Executive Committees Medals, Diplomas and Honorable Mentions. Successful at every Trial and Exhibition by actual test in competition with the leading articles of their class, which must be conclusive that our goods possess more than ordinary merit to command honors of this nature. These facts, together with the endorsements of the most scientific Farmers and Hay Dealers of the Country, also practical illustrations for depositing hay in mow or on stack, are fully set forth in our Pamphlets, furnished free upon application to

JAPANESE SILK WORMS EGGS.

One Hundred Cartons of Japanese Silk Worm's Eggs of very superior quality to be sold very reasonable in lots to suit purchasers.

Apply at the FARMER OFFICE,
320 Clay Street, San Francisco.

Best machine ever offered for paring, coring, quartering or slicing apples. Does the entire work expeditiously, promptly and well—separating core and parings from fruit at once. Will prepare more fruit for drying, pies, or family use than six ordinary parers. For farmers it is indispensable. Fruit can be taken care of in season, instead of allowing it to rot in the orchard. Three times the price of the parer can be saved on every crop. A barrel of apples can be got ready for pies in one hour, saving labor alone, in a single year, many times the cost of the parer. Territory for sale. Agents wanted. Send for circular.

TIPPECANOE APPLE PARING MACHINE CO.,

Apply at FARMER OFFICE.

OIL CAKE MEAL

THE BEST FEED KNOWN

FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other foods as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 21 9-100 per cent. For life-sustaining properties to all stock exposed to sudden changes of weather or over-driving, has no equal.

For MILCH COWS it is particularly valuable, increasing the quantity of milk and giving it a quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quarter to one gallon per day, mixed generally mixed with the mash of bran slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily one embodying three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and gloss of the skin.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($40 per ton), it is the cheapest feed in market. It is now selling in New York at $42 per ton, and at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on the coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

NOS 3 AND 5 FRONT STREET,
San Francisco.

TRUE'S

IMPROVED

POTATO PLANTER.

This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed.

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of inestimable value; because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

A NEW ARTICLE.

Composition Pipe for Conducting Water.

THE ATTENTION OF RAILROAD COMPANIES, Farmers, Dairymen and others, is called to our new Pipe for leading water. It is lighter than ordinary lead pipe, and much cheaper than iron, will stand a heavy pressure, and deliver about one-third more water than iron pipe, provided the sizes are the same.

We are now manufacturing all sizes, from one-half to two-inch, and can fill large orders at short notice and put on reels for shipment, the same as lead pipe.

Samples can be seen at our office,

No. 11 California Street.

THOMAS H. SELBY & CO.

Horticulture.

MULCHING.

[We call special attention to the following article upon *Mulching*, which we find in the *Farmers Union* of Minneapolis, Minnesota. We copy this article because we are glad to find the views we have so often urged upon our readers thus strongly set forth by others.

If our Orchardist would wish to know why they have so much *small fruit on their trees* we can tell them. The *surface roots are burned up in our dry summers*, and the fruit *shrivels and dwarfs*. Mulching will prevent this, and even now, where fruit is *half grown* a good *mulching* will accomplish wonders.

☞ ORCHARDISTS TRY IT. [ED. F.

Last November we neglected to mulch five trees in our garden. When the Spring time came we found those five trees dead—died because they were not mulched. They were root killed. We mulched over one hundred of our trees in the same grounds. They came out just as well as we could wish. The names of the varieties of trees killed for the want of mulching are as follows: One Montreal Beauty, one Transcendent, one Lady Crab, one Standard Dutchess of Oldenburg, and one Dwarf Dutchess; three semi-crabs, and two standard varieties of the standard apple. The dead trees received the same cultivation, were planted out at the same time and under the same circumstances, but in the hurry of the season we neglected to mulch them, and as a consequence they are dead. The proofs positive, and we feel that we were properly punished for neglecting a few minutes work. This is the second time we have lost trees under similar circumstances. The carelessness, or otherwise willful neglect, shows the importance of mulching in this climate. Nay, more, mulching is just as necessary in summer as it is in winter. It is equally as necessary in the spring and fall as it is at other seasons of the year.

By mulching in dry weather it keeps the soil moist. The dryer the soil the more beneficial the mulching. If this rule is not observed trees will not grow half as much. There is no danger of trees making too much wood in the Northwest. The more wood the better the trees will winter. Mulch, properly applied, kills all weeds and grasses. It will rot the sod around the trees. *Again*, it makes the soil lively and light. It will introduce heat, air, dew, rain. It shades the ground, and hence increases its fertility. A steady temperature is constantly around the roots of the trees. Apple trees, and many other fruit trees, are strong feeders, and require a pretty good soil. By mulching, when the material rots, it becomes manure, and if the mulching is composed of leaves, hay, or straw, it makes a vegetable fertilizer which is very desirable. Especially is this so in orchards that are cultivated. We don't care in what circumstances a tree is set out. By liberal mulching it will grow a good deal more rapidly. It will be more hardy. It will give trees life and health. By all means mulch the trees.

REMOVING THE LEES WITHOUT RACKING.

Delderez, in Clermont-Ferrand, applies for withdrawing the lees from the wine, a method just contrary to that which has been in use hitherto. While the usual operation consists in drawing off the wine and leaving the lees and the sediment in the cask, Delderez removes all the sediments at the bottom, without drawing off the wine. This is plainly done by a vessel placed at the lowest place of the cask; A little keg which is connected with the wine cask by a pipe provided with a cock, while another cock is on the bottom of the keg to let the sediment run out. When the connected pipe is opened, the lees drop down through it into the keg, as the lowest part of the cask. Whenever the sediment shall be from time removed from the keg, the upper cock is closed, and the keg is emptied, an operation by which the wine in the cask is not disturbed in the least. This done, the lower cock, that at the bottom of the keg, is closed, the upper one at the connecting pipe is successively opened. The sediment will at once commence to drop slowly through the pipe into the lower keg, and the purifying of the wine from the lees in this way can be easily effected, without hurting the wine in any way.—*New York Wine and Fruit Reporter.*

The vine disease is said to be spreading through the grape growing sections of Portugal.

WHO MAKES SCRAP BOOKS

'Tis said "In the making of Books there is no End," and we know there are many persons who are always interested in making SCRAP BOOKS, now to all such persons, we have some very important information which will benefit them.

It will be seen by our advertisement of OLD NEWSPAPERS FOR SALE that we can furnish just the *right material for Scrap Books*, for we have in this collection of Old Newspapers, a series of papers of 10 to 15 years and from every State in the Union, and also European papers; also select scientific and literary papers, journals of all kinds. NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure, and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent to the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles or merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders shall be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement, we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns several of which we have the exclusive sale for this Coast.

THE POTATOE PLANTER,
JEBB'S PATENT CHURN,
CHEESE CURD CUTTER
PATENT WEEDING HOE,
LIFTING HAY FORK,
WITH OTHER VALUABLE IMPLEMENTS.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

Of the best kind

GREENHOUSE AND BEDDING PLANTS,

These are grown at our residence under our own care where they always can be selected.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference

WARREN & CO.
Farmers' Headquarters 320 Clay Street, up-stairs

The California Farmer.

SAN FRANCISCO.

THURSDAY EVENING, AUGUST 31, 1871.

THE CALIFORNIA FARMER READING ROOM AND MUSEUM OF NATURAL HISTORY.

220 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines of space, in Nonpareil type, for *one* insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

OUR NEW YORK AGENCY.

Geo. P. Rowell, & Co., 40 Park Row, New York

AND

S. M. Pettengill & Co., New York

Are the Sole Agents for the CALIFORNIA FARMER in that city. They are authorized to contract for our Journal for the Advertising and make Collections for the same at the very lowest rates.

Our many Patrons in that city and State are requested to call on them, give their business to them and subscribe for our Journal which will always be found on file at their READING ROOMS

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue of our Journal*, to which we would direct their *special* attention.]

We are greatly indebted to Alexander Ashley, Esq., Chief Clerk in the office of the Signal Officer of the War Department at Washington, for a handsome copy of "Suggestions as to the Practical uses of Meteorological Reports and Weather Maps" now issued by that Department, and also for the Maps which accompanied the book, each of which are of great value to the cause of Science. We shall publish from these, valuable Suggestions.

CATALOGUES RECEIVED.

We have received the *New Catalogues* from Vick's Celebrated Seed Warehouse, of Rochester, N. Y., one of the largest and most complete establishments for Seeds and Plants, and for everything in Horticulture and Floriculture in our country. The Catalogues received embrace his large collection of Hardy Bulbs.

We have the Catalogues of Messrs Atwood, Root & Co., of Geneva, N. Y., Nurserymen.

MANUFACTURERS' CATALOGUES.

We have Catalogues of many new Inventions of Manufacturing other than Agriculture, that would require a whole column to report them. They should be reported in our *Advertisements*, that would pay them.

RESOURCES OF KANSAS.

We have received from the author, C. C. Hutchinson, Esq., a voluminous publication of over 300 pages, with large Map and other Illustrations of "Kansas and its Resources" with all needed information for the Settler.

This book is published by State aid and by authority, and sent out with high commendations, endorsed by the Governor and authorities of the State. This is the way to settle up a State. No State in our Union has grown so fast as Kansas.

This is a valuable publication and is a book that will accomplish much for the settlement of that very rapidly growing State. The book is sent out bound in paper at $1 per copy, and in muslin at $1 50. Address the Author, Topeka, Kansas.

We have the Report of the President of the San Francisco Benevolent Association made to its Contributors, Members and Friends, and invite their earnest co-operation, while the condition of the Society is fully presented

The next Term of the State University at Oakland, commences Sept. 17th. We have no report of the number of students for the Agricultural Department.

Oakland has inaugurated a new Street Railroad from Oakland to Brooklyn. The first spike (Golden) was driven by Hiram Tubbs, Esq., last Thursday.

Our *New York Correspondent's Letter*, just came to hand, and will appear in our next.

Our *Special Paris Correspondent* sends us important news from France, we shall give his Letter next number.

THE NATIONAL FAIR.

The *American Pomological Society* begin their GRAND EXHIBITION at Richmond, Virginia, on Wednesday next and continue three days.

California will be represented by her Fruits from many counties.

CAPITAL—MANUFACTURES—INDUSTRY.

The vast amount of IDLE CAPITAL now stored in the vaults of our Banks and Public Institutions, and remaining there unemployed, is a reproach to our State for its wisdom and business shrewdness. Never before has there been such a vast amount, estimated in millions that is now seeking use, and yet it is held with a tight grasp unless solid securities can be offered and nine or ten per cent. per annum can be realized.

The *Manufacturers* of the Eastern States that *supply California with her Goods* are netting the *stockholders* from 12 to 20 per cent., while the Bankers there offer *money* at 2 to three per cent.

Where does money pay best, in manufactories, or in the vaults of Banks? Bankers and Capitalists want the most they can get for their capital, and a little reflection ought to awaken their attention to the *fact* that a better interest can be had for that capital by the establishment of manufactories on this Coast than by any other possible plan of investment and until our men of wealth, our Bankers, our Capitalists shall be willing to aid Manufactures and the Mechanic Arts, unless they will use a portion of this now *Idle Capital* to stimulate the *Industries* of our State, they will see trade and business languish and complaints of hard times, dull times ring its changes in our streets more loudly than it has yet done for many years.

The policy of our Capitalist must be changed, and instead of investing all their wealth in Lands and Stocks, and in Speculative Schemes in the making of Railroads, they must build up manufactories that shall eat up the *raw material* that is now sent out to our State to be manufactured abroad and brought back here with the added cost of Eastern labor that should be employed here. This would build up our State, give labor to those who now seek it, erect buildings on vacant mill sites on our water courses, fill our now empty tenements, stimulate to greater production of the raw material for manufactures, give a lively hum to all our workshops, and load our Railways with produce, and thus give this *immense capital*, now unused, vitality, so that it will pay promptly its own value and interest.

Unless California Capitalists shall awake to the IMPORTANCE OF MANUFACTURES and the *Industrial* resources of our State, and speedily too, our State must retrograde.

The Grand Exhibition at the Pavilion will readily show what can be done.

MASSACHUSETTS HORTICULTURAL SOCIETY

This most efficient Society, one of the most successful probably in the world and the wealthiest, will hold their Grand Annual Fair in September, commencing the 16th, and continuing through the week.

The Exhibition will be held in their splendid Temple in the city of Boston.

This noble Society was organized in 1829, and among its early founders were some of the best and noblest men of Massachusetts. Some few of its early founders "Still Live," among them the venerable and honored "MARSHAL P. WILDER," whose labors in the science of Agriculture and Horticulture are known world wide. Mr. Wilder and a few distinguished men of that day, nearly *Half a Century ago*, will gather again this year to their Annual Fair What memories are awaken when they thus meet, and at the Annual Festivals note the wonderful changes they have seen, and have nobly aided to change so much to the better.

Instead of a little upper room up in "Cornhill" among the Dry Goods dealers, they now have a spacious and costly *Temple*, the property of the Society, with ample means to do all they desire for the advancement of the cause they have so long and so ably labored for.

The Massachusetts Horticultural Society now enroll upon its Record *one thousand and fourteen Members*, many are Life Members. The value of the Property of the Society is $166,890.36, the Library valued at about $10,000. With such ample means and with active and influential members their means of accomplishing good is very great.

The coming Annual Exhibition gives promise of being a most successful one, and at that exhibition there will be Samples of the Fruits of CALIFORNIA upon its table, a State and region of country hardly known at the organization of this noble Society.

We rejoice to make these records of a Society where we have in long past years enjoyed so much, and where we have received so many lessons from practical men, many of whom now *sleep*, for we remember well the formation of the Society, and was with it till '40, when we came to the Land of Fruits and Flowers as well as the "Land of Gold."

THE NEW COMMISSIONER OF AGRICULTURE.

President Grant has appointed Prof. Frederic Watts, of Carlisle, Pa., to be the successor of Hon. Horace Capron, at the Head of the Agricultural Department at Washington, D. C.

It will be remembered that Commissioner Capron was called to Japan to fulfil an important mission there, and Prof. Watts is thus appointed to take his place.

Judge Watts is extensively known as a practical Farmer of extensive experience and influence, a man of large wealth, and President of Railway companies, and his appointment will give great satisfaction, as it is assured he will make the Department his pride, and give to it his best energies.

CHANGE OF HABIT IN INSECTS.

John M. Horner, Esq., the Veteran and Pioneer Farmer, of Mission San Jose, in a Letter received from him, says: "Bees, Flies and Insects, have *let the fruit alone this year* and taken to the willows to collect the "Honey Dew" from its branches, a thing never occurring before since I have lived here, now *Twenty-five Years*."

This is an important item to note. Have any other of our Farmers made note of any similar fact?

SANTA CLARA VALLEY EXHIBITION.

The Annual Fair of this Valley drew an immense crowd to San Jose this year, the largest we ever saw at a Fair in that city.

The Exhibition was held in the new Building on St. John Street, in the Pavillion, and was completely filled with a miscellaneous display of Pianos, Melodeons, Pictures, Sewing Machines, and Fancy Goods, save a small portion a few tables and three flower stands, and three fruit tables that we have named.

Upon entering the Hall no one would suppose the exhibition was a *Agricultural* one, as it had no such appearance, and until the visitor passed the middle of the hall were the indications seen. Many of the articles exhibited this year among the Fancy Goods and Pictures, we have often seen at their Fairs before. We give annexed a correct sketch.

FLOWERS.

Wm. O. Donnell, a fine display of Pot Plants, well arranged around the Fountain about 100 plants. The Fountain was manufactured at the San Jose Foundry.

Mr. Donnell's display is highly creditable to him and the Fair, the design of this centre display and the Fountain we attribute to him, and as Vice President and an earnest worker he has done well.

L. F. Sanderson made a fine Pyramid of Pot Plants, many of them really choice. We noticed superb Gloxinias, Achimenes, Fuchias, Geraniums. The centre of the Pyramid crowned by a large plant of "Pampas Grass" in bloom, which set off the whole gracefully.

Mr. Sanderson also made a display of Ferns and delicate Flowers in a glass case, also a fine display of cut flowers, Roses, Dahlias, Pinks, with Hoquets, &c.

Thos. D. Appleby—A collection of Cut Flower Seed, &c. Mr. A. has grown this year one-fourth of an acre Opium, of the Turkish Opium variety.

J. Lewis, an Amateur Florist, had a very pretty exhibit of Cut Flowers and Hoquets.

FRUITS.

B. S. Fox, San Jose, made a very fine display of 140 Dishes of Fruits—of Pears and Apples, some samples really extra.

This collection covered one entire table handsomely.

Mark Farney exhibits 40 Dishes of Apples, Pears and Plums—a few very fine specimens.

Mr. Farney'y collection was a select one.

Chas. Caine exhibits a small collection of Apples—13 samples all very fine samples real show fruit. Among these were Alexander, Black Detroit, Tompkins County King and Gravenstein and R. I. Greening.

Mr James Low shows 22 Dishes excellent fruit 11 Pears, 7 Plums, and 4 Apples.

CALIFORNIA SEEDLING PEAR

We are glad to record the fine exhibit of *Seedling Pears* from B. S. Fox, Esq., of which we reported last year in extenso. This year Mr. F. exhibits 18 varieties, selected from his large collection. Mr. Fox also exhibited 26 additional varieties of Apples—choice, with Nectarines, Currants, Strawberries, also English Walnuts, Almonds, and Pomegranates.

The entire collection of Mr. Fox, aiding very much in connection with Mr. Farney and two others to give the Hall some gleams of Horticulture, and were it not for these, and the handsome show of O'Donnell and Sanderson, we should hardly suppose it a show of either Horticulture or Floriculture, but a display of the wares of business men to show their Goods, Wares, and Merchandise as a medium, and this we speak in no unkindness, but the proof is clear that those growers of our great staples feel too little interest to take part in these shows on this very account, and thus the Hall must be filled with miscellaneous articles or go empty.

The time has come when a change must be made—and it will be done, there is surely products enough in this great Valley to have completely filled this Hall with them.

WINES.

D. M. Harwood, 20 varieties of Grapes, cultivates 125 acres. 3 varieties Wine—Catawba, Maderia and White—will make this year 20,000 Gallons of Wine.

S. P. Stockton, Foot Hill District, 6 miles from San Jose, 9 varieties of Grapes—some very fine. He also exhibited 3 varieties of Wine—Claret, White Wine and Port—will make 2000 Gallons of wine this year.

Charles Lefranc exhibit a collection of all his Wines—Red, White, Muscat, Brandy, all very excellent indeed, and a collection of Grapes.

Mr. Lefranc has about 100 acres vines the very best, his vintage will be large.

P. Sansevain exhibits his Grand Prize Champagnes. This completes all the Wines shown.

A collection of large and extra Plums, with a few Pears and Peaches of fair quality by John McKano.

Several collections of Preserves—all excellent, completed the Domestic show.

One specimen of Bread only in the exhibition, was two loaves, made by a little girl of 11 years old, near it a bottle of yeast that would keep one month—that *leaven* leaveneth the Whole Lump (of the Fair.)

GRAIN AND VEGETABLES.

1 Bag of Barley, grown in the Valley. 1 Bag of Wheat, 1 of Surprise Oats, exhibited to show the quality of the Grain.

1 Big Beet grown without irrigation, and weighs 58 pounds.

One Sun Flower, 3½ feet in circumference.

Several collections of Vegetables from different Exhibitors.

Several large Squashes, no weight given, grown by Edmond Cooper.

M. Schellenberger exhibits *Tall Corn*, 14 and 16 feet high. We beat it at the Fair of 1853, by 10 feet.

THE WHALE THAT SWALLOWED JONAH.

This celebrated whale was found at Monterey, a chair was made of the vertebræ and ribs, and made a very comfortable chair, but how that famous Jonah could remain in his belly is a mystery, for as we sat in the chair our elbows projected beyond the ribs, so that the whale must have felt Jonah's elbows rather uncomfortable—we cannot vouch for the accuracy of this whale, but we have the facts from Mr. Porter, the exhibitor, he is our authority.

Servais Tonnar exhibited his Rural Chairs and Settees, Hanging Vases, Picture Frames, &c.—one Settee beautiful, valued at $75; one Chair $50, one at $15, Basket $10. Picture Frames interlaced with Abalone shells—quite showy, also the bodies of Buckeye trees prepared for making tables, &c. A collection of Implements from the Fiji Islands attracted much attention. The Rural work was worthy special note and all done by Mr. Tonner himself.

The Carriage Exhibition was very good. There were eleven very handsome vehicles of all kinds on exhibit.

The Agricultural Implements was meagre, one Fan Mill, one Swing Wood Saw and a Pair of Wagon Wheels was all.

San Jose Woolen Mill make a good show of their Cloths, Cassimers and Doeskins this is "Home Manufactures" and what aids our Industries.

From a careful examination of the Goods manufactured by this Company, we think they equal any made in any part of the United States.

San Jose Pottery show excellent wares, this is commendable.

One Cheese, one Can of Lard and one Ham, and two sides of Bacon constitute all of this kind of home products.

Mr. Stern exhibit a collection of Harness work—very excellent.

The Marble Work, Wood Work, and other collections of Miscellaneous Articles we shall report in our next, together with such Stock as was not at the Bay District Fair and here reported.

The attendance at the Fair afternoons and evenings was good, but the great gatherings were to see the exhibition of Stock which was very excellent, and the Races which drew the crowd.

The show of fine Stock we esteem one of the best features of the Santa Clara Fair, outside of the Fruits and Flowers and Manufactures.

The same Cattle and Sheep, and the entire herds here shown were the same as recorded for the Bay District Fair, and our reports embrace them all, it was a fine exhibit. A few other animals such as Cashmere Goats, &c., were at this Fair.

The exhibition of Stallions, Mares, and Roadsters in the Horse Stock was very fine, some splendid animals indeed.

The Races were well patronized by the great body of the people—crowds go to the *Races* while the Hall of Exhibition wants visitors.

THE MECHANICS FAIR.

This popular Exhibition is now at the high tide of success, and the thousands that daily and nightly visit the Pavillion is proof that it is popular.

There is so much to see, so much to engage attention, that one desires to go often. It is also a grand place to *find* a friend, one feels sure the friend is there *if you can find them*.

The Exhibition will prove a grand *Pecuniary success*, and will probably secure a grand total Receipts of $67,500—this is our estimate.

The Agricultural, Manufacturing, Mechanical Departments are well arranged, and with admirable proof of our progress as a State.

The Floral Department is a perfect *Garden*, and a Refreshing place for a promenade, and highly creditable to the Managers of it.

THE IMPROVED BED FASTENER.

A new and Valuable Invention has just been Patented, and the Invention made and placed before the public to be known as the Improved Bed Fastener.

It will be sent out by the Firm of J. Rohr & Son, Furniture Dealers, on Market Street, Invented and Patented by Jones & Rohr.

This Invention is designed to hold the side rail firmly to the bed post, and to hold all steady and secure. The improvement consists in lengthening the fastener beyond the piece that usually holds the screws by means of a circular knob attached to the fastener and sunk into the side rail to hold all as with the grasp of a vice, immoveable.

By this invention the bedstead cannot be swayed too and fro, as it usually is when only held by screws, which wear into the wood work loose, and thus the frame becomes rickety as is the case with the old style fastener.

The Inventors have made arrangements to have the castings made at our Foundries here instead of Importing, and thus keep the value of all labor here.

There are two sizes, one for large bedsteads and one for small. We have seen the invention, and it is beyond all question a grand invention.

The cost of it will be small, and we learn that the Furniture Dealers here all approve it and will adopt it and apply the same generally.

THE AMERICAN EXCHANGE HOTEL.

Our Farmers and Stock men, and the Yeomanry of our State, always find a most excellent "Home" at the AMERICAN EXCHANGE.

The Exchange is one of the Pioneer Hotels, well and popularly known, and the efficient "Sargent," the Proprietor, has made many additions and improvements of late to the Hotel, so he can always accommodate the thousands that come to him.

THE BAY DISTRICT FAIR.

STOCK SHOW.

Col. Younger, of San Jose, with a Herd of fourteen Durhams, made a very fine display, and paraded his Stock handsomely on the ground, bringing them into line for the Judges in true military order.

His Stock consisted as follows:

Glencoe, a splendid Roan Bull of 2300 lbs., an animal hard to beat, a real beauty.

Cows—Lady of the Lake, 1440 lbs.; Sprightly, 1475 lbs., and White Rose.

Calves—Jenny, Helen, Lady Bell, Romey, Storm, Comet, Howard, Lady O'Keefe and White Swan, generally one year old.

This Herd made a very handsome appearance, doing great credit to the Fair and to the owner.

W. L. Overheizer, of Stockton, made a good display, consisting of *Eleven head*. 1st. His splendid Bull, Grand Turk of Oak Home, sired by Imported Grand Turk; Dam, Lady Booth.

A splendid Cow, Tulip, with 5 young Heifers and 2 young Bulls.

Mr. Overheizer's Stock was all Durhams.

Wm. Quinn, of San Jose, exhibited his fine herd of Durhams and Grades.

A large and noble Durham Bull, Tyrone, a very stately animal, weighing 2230 lbs.

Three Cows—Lady Sherman, Luna, and Mary, all fine animals. One fine Bull Calf Butterdale.

These were of all Durham Stock.

H. W. Seale, of Mayfield, exhibited a herd of partly Australian Cattle, very fine. 1 Bull, 3 Cows, and 4 Calves.

These were, Bull—Moss Rowell; Cows—Cowslip, Wildeye, and Mayflower.

A most creditable display of late Imported and valuable Stock.

Col. W. H. L. Barnes exhibited a very fine Alderney Cow.

C. B. Polhemus, of Santa Clara, exhibited a fine Durham Bull and an Alderney Bull and Cow, both fine.

S. B. Whipple, of San Mateo, showed a very splendid herd of Stock, one of the best since the exhibits of the "Welsh" Durhams of Tehama.

Mr. Whipple's Stock is as follows:

10 head—3 Bulls, 3 Cows and 4 Heifers, viz.: Cows—Effie Dean, 13 years, (the mother of the family of Effie Deans, *thirteen* in number, a splendid herd,) with her calf by her side. Effie Dean 2d, 9 years; Effie Dean 5th, 7 years, with 3 Bull Calves and some Stock, very fine.

Mr. Whipple's Bull, Johnny Deans, weighs 2400 lbs.; a brother 1950 lbs.; and a kindred 1200; these with five Durhams, another family, made a grand show.

J. B. Redmond, of Novato, had at the Fair his famous Durham Bull, "Lollo Booth" 2543 lbs., one of the finest Bulls in the State. His fine Cow, Mollie, and four Heifers, all of fine milking stain, and most valuable.

The Exhibit of the Holstein Bull and Cow by S. B Emerson, of Mountain View, was an attraction. These fine animals, the Dutch Dairy Milkers, are Black and White, Spotted, fat, sleek, and handsome—real beauties—and will become favorites.

The name of the Bull "Apperdoss" 12th, 3 years, and claimed as great milking stock. The Cow Apperdoss 8th and 3 years old. The Cow had twin calves, very fine ones.

Mr. Emerson also exhibited a Cotswold Buck and 7 Ewes and Lambs—fine.

Col. Peter Saxe from Kentucky recently, has on *Exhibition only* seven head of Durham young Stock of high Pedigree. The Stock are thin by reason of their long journey by Railway of over 3000 miles, for which due allowance should be made for a wearisome travel.

Col. Saxe also exhibited 15 head of Cotswold Sheep just imported by him, of the best and most valuable kind—7 Rams and 6 Ewes. The high character of the Cotswolds we have given recently.

Wm. Hall, of San Jose, exhibited a fat Durham Steer of 2685 lbs, a splendid animal.

Charles Clarke Milpitas showed very fine *Grade Stock*, high up in the good points—very fine.

J. M. Patterson exhibited his excellent Cow, "May Bird," of great milking qualities.

J. R. Ross, of Lakeville, showed his herd of Devons—a few animals but beautiful pets—cannot be excelled in any State.

John Parrot showed a fine Devon Bull, Princess, 4 years old.

Robert Ashburner with a herd of 13 Durhams and Grades, made a very fine show.

S. Daniels, of Lakeville, with his Devon herd of Bulls and Cows, made a fine show—very fine Stock, should be grown more generally.

Chas. H. Cushing showed a Bull, Buttercup, 16 months old only—a fine animal.

The principal portion of this Stock will go to the San Jose Stock Show, thence to Stockton, and also to the State Fair, thus winning Premiums at each and all—a real Sweepstakes.

The Red Bluff *Enterprise* says:

James Keith, of Red Bluff, has been threshing for weeks at the farm of J. W. B. Montgomery, of this county. Mr. Montgomery reports the following work done by Mr. Keith, which we take in its average to exceed anything ever done in this country: In eight days Mr. Keith threshed 16,000 bushels of grain, all wheat except 2,400 bushels of barley. On Saturday last he threshed 2,400 bushels, finishing by 6 o'clock P. M. The work was done, no slight or neglect in any part of it.

HAIL AND RAIN.

The country in the neighborhood of Cottonwood was visited by a tremendous storm of rain and hail on the afternoon of the 5th inst. Hailstones larger than a walnut fell in large quantities, and covered the ground to the depth of an inch or two.

AGRICULTURAL PAPERS.

It is not easy to estimate the benefit which California, in all her varied interests, has derived from the influence of such an able and carefully edited Agricultural journal as the CALIFORNIA FARMER. Thousands and thousands of our farmers and horticulturalists have benefitted by its suggestions and advice. And while individuals have reaped immediate profit from the faithful and intelligent labors of Col. Warren, the editor and publisher of that valuable journal, the entire commonwealth has been a participator in the more remote benefits. A good, well edited, intelligent Agricultural journal is a great blessing to any State—more especially to one where the farming interests are as important as they are in California.

[The *Industrial Fair Gazette* thus kindly speaks of us in one of its recent issues, and for these kind words, *we are grateful*.

In the *Eighteen years* that we have labored it has been our constant aim to *Benefit* our adopted State, and to promote its highest interests, and this we have done without any selfish motive, looking to the approval of good and true men for our reward.

Kind thanks, neighbors of the *Gazette*.—ED. F.

NATIONAL FAIR.

THE AMERICAN POMOLOGICAL SOCIETY will hold their Fair this year at Richmond, Virginia, commencing September, 7th, and continuing three days. Exhibition open to the Nation. [See Circular in our columns.

Hon. M P. Wilder, President, P. Barry, Esq., Chairman Fruit Committee.

ELEVENTH

ANNUAL FAIR,

THE

SAN JOAQUIN VALLEY

Agricultural Society

Will hold at the

City of Stockton,

A Grand Exhibition, Beginning

Tuesday, 12th of September,

And ending on Friday.

Splendid Premiums

Will be awarded to competitors in every department of Industry—Agricultural and Mechanical.

For further information all persons interested are referred to the Premium List, which will be circulated throughout the entire State.

A large new Hall will be provided for the Exhibition.

Arrangements have been made for the accommodation of Stock of every class at the Fair Grounds.

THE RACE TRACK

Was never in better condition than at present, and in trial of speed liberal premiums are offered to attract the attention of all owners of fine Stock.

On Friday Evening, September 15
THE

Annual Ball of the Society

Will be held.

Every possible effort will be made by the Managers of the Society, and the citizens of Stockton, to contribute to the comfort and pleasure of visitors from the country, to whom a cordial invitation is extended to be present on that occasion.

Persons wishing information may address either of the following:

H. K. DOAK, President.
T. K. HOOK, Treasurer.
H. T. COMPTON, Secretary.

CHAMPION HARROW.

This is made entirely of Iron, and so constructed that each tooth cuts a seperate furrow.

It is divided into sections which can be adjusted at any time to suit the teams used.

It is Light, Durable, not liable to get out of order, and particularly adapted to uneven surfaces.

A trial is all that is necessary to convince the most skeptical of the above facts.

For Descriptive Catalogues and Price List, Address

A CARD.

TO EASTERN ADVERTISERS.

We feel it our special duty to notify our Advertisers in all the Eastern States, that if they desire to reap the *Full Benefit* of their advertising that

NOW IS THE TIME TO BEGIN.

It is all important to Californians who desire to *Import from the Eastern States* their

Trees, Seeds, Implements, or Merchandise,

that they should know where to find them *month* before they are to be used, so they can by a Correspondence with the parties know *who can satisfy them them to the best advantage.*

Those Dealers in any articles they desire to Introduce into the Pacific Coast, should by all means begin early. Soon our season of PUBLIC FAIRS commence, and this is a time when our Journal is scattered widely, and thousands sent out in the Cause of the Fairs and to promote our Industry, and all these will advantage ADVERTISERS.

The advertiser that begins early is the one that takes the lead in the business, and now is the most auspicious for CALIFORNIA will Import everything that is

NEW AND DESIRABLE

cost what it will, and those Business men who are up and doing, *Manufacturers* of Implements for Farmers Sellers of Live Stock, Seeds, Plants, Trees, Garden Tools, Agricultural Books, &c., &c., should now be ready to send out their messages and let our people know what they have to sell.

The CALIFORNIA FARMER now enters upon its

THIRTY-SIXTH VOLUME,

and can give to all a BETTER CHANCE for PURCHASERS than any other medium, as we go *directly to those* who would purchase.

New Yorkers can send their advertisements to our Advertising Agents, G. P. Rowell & Co., others directly to us. See Terms in our Columns.

Address WARREN & CO.,

320 Clay st., San Francisco.

Home Miscellany.

A LESSON FOR HUSBANDS.

We find in the Mobile *Register* of August 19th, the following very happy, and we esteem them very beautiful sentiments worthy of the serious and careful consideration of Husbands, there are beautiful and tender sentiments conveyed in this Poem.

The author has a sweet *Nome de plume*" and by it we judge the author to be a Lady—the signature is "Jeudwine," and the Poem is headed

To A Sprig of Mignonette.

No unknown lover's gift to this,
For by this golden sign
I'm a wife, and it was given
By Philip, who is mine—
Quite tenderly looked he just then
With eyes of blacky-brown;
He brought a twig of mignonette
Out of the dusty town.

It has been long, so long ago,
To me since he has brought
A simple flower to tell his love
Thus had I often thought;
And I was sick, the flower dry,
My eyelids dropped beard-dew
Upon its modest face—thereat
Its sweet soul upward flew!

I could have kissed his old brown coat—
That dear old, business brown,
To think of me away off there,
To pull a flower down town!
I always loved a mignonette,
And it has been so long
Since I had one—it hurts my throat
To sob this foolish song.

Not that my Philip loves me less,
But this you often see,
When men win wives they may forget
The wooing; it must be
Our fault to miss the eye that learned
Our every wish or thought,
The hand that folded tenderly
Our shawl, or flowers brought.

We pine for them, and scarce know why
These trifles are so dear,
(There's many a wife whose soft white throat
Will ache and turn from here)—
'Tis wrong to sigh for little things
That busy men forget;
When we are won, shall honeymoons
Shine on and never set?

"Thank you," was all I found to say,
But horrid printer's fok
Was blurred all o'er the book I held;
'Twas weakness? So *I* think—
I called my husband back, and said,
With kisses more than one,
"Thanks for the sweetest flower that breathes
Beneath the smiling sun."

"Yet foolish child, why do you weep?
How can it move you so?
I used to bring you rarer flowers"—
(Yes, *used*, he didn't know,)
No, Philip, not for the flower alone—I
I'm foolish, yes, that's clear;
It brought me back the olden time
When you were courting, dear!

Now Philip o'er my shoulder
Has read this simple rhyme,
And smoothed my hair down softly,
Just like the sweet old time—
And I wish in *sotto voce*
'Twere oftener done, and then
We would not cry for nothing,
But—that's the way with men.

With mingled sad—and—gladness,
He vows he'll ne'er forget
To woo and win me daily now—
So by this mignonette,
I vow that I'll forgive him,
(Yes, *that's* a way of *ours*,)
But how we miss that petting, when
Forgotten! Where's my flowers?

I'll put this one away to sleep
With golden strands of hair,
And let it leave a message
In softly dying there.
They call us foolish—may be
We are, indeed, but then,
Love's lessons come from angels,
And they *forget—those men!*

This may be song or sermon, friends,
As some one else has said;
But woman's heart, my brethren dear,
Is wiser than man's head.
The mignonette is dying now,
Its mission of a day
Is preached to wives and husbands;
To woo and win always.

Count Montroud, the famed "Memoir Writer," when asked to teach one how to succeed in society, said, Oh, it is simple enough: "Talk to the middle aged and young ladies, and listen when the old ones talk to you."

Every boy and girl should be taught some useful employment, such as shall make them self-supporting.

UNINTENDED INFLUENCE.

BY WILLIAM AIKMAN D.D.

Did you ever stop to explain the effect which the mere presence of some persons has upon you? They may not speak a word, scarcely give you a look, yet they influence you. You feel them without either touch or sign.

There are persons whom you speak of as having a chilling manner, which at once repels you. The coming of such a one into a circle where a moment ago was cordial sympathy and pleasure, is like the floating of an iceberg into the tropics, the air becomes hyperborean where summer was reigning.

So there are those whose personal presence you can well describe in no other way than by saying, it is sunny. They carry with them an air of health and joyousness. Their step in the house makes the children smile and the circle grow full of talk; it is, even in the sick chamber, like a breeze of spring; you can not tell why, you only *know* that the place is brighter for their being there.

This effect of mere air and manner goes much farther than the emotions and spirits of those who feel it; it has a bearing upon character and shapes life. No one can tell how early it is felt and how lasting are its results. The infant in its mother's or its nurse's arms is perpetually a recipient of it. That infant may be catching hour by hour the disposition and character of her upon whose bosom he is held. It is not material food only that he draws from the mother's breast,—power is emanating in word and manner, nay, in the subtle unnamed outgoings of thought from that bosom, and the little one makes them part of his life. The fretfulness or petulance of the mother is seen to reproduce itself in the child. Many a mother who has been impatient and perhaps angry at her infant because it was "cross" perhaps, were she willing, might find the cause of it all in her own disposition. How could he catch sunshine out of a cloud? How could he gather material for smiles out of the perturbed place where he has been nestling?

It is most probable that the character and disposition of children are formed more by these silent influences than by words and precepts. Indeed, in a multitude of cases these latter are wholly overborne by the former; the direct and announced teachings are in one direction, the secret but mighty outflowings are in another. Arctic navigators drifting northward sometimes see a huge iceberg crashing its way southward through ice-fields—the unseen under-current has a mightier hold on its mass than the surface drift.

You may call it what you will, or you may be unable to name it at all, yet there are few who are cognizant of the influence the simple presence of certain persons have upon them. Women know it, though they may not be able to explain it. The quick instinct of a woman! how keen it is to discern character, and to recognize it simply by this unseen outflowing of the soul! Perhaps it is because the nature of a true woman is more keenly sensitive than man's. A needle floating delicately on the water's surface feels the faintest approach of a magnet.

Laura Bridgeman, the deaf, blind, and dumb girl, was a very striking illustration of this recognition of unintended influence. Before she was taught self-restraint, and had learned to guard her demonstration of feeling, she would show, on the moment of introduction, the most opposite emotions toward those who approached her. On taking the hand of one person she would at once dash it from her and turn away with every expression of annoyance or, possibly, disgust; while touching the hand of another, she would hold it and endeavor to pass her own hand caressingly over the arm and cheek of its possessor. Deprived of the ordinary means of knowledge, her abnormal sensitiveness actually felt the emanations of the stranger's life and character.

But extreme instances need not be cited. All persons are more or less affected by this occult power. One man makes you easy, another disturbs you merely by his presence, and you may not be able in either case to explain the reason; and what we feel as flowing out from other men is perpetually streaming out from ourselves.

Every man carries with him a power which he can not but exert. He can not so shut his soul within his body that it may not go forth. Take attar of roses and fold your hands tightly as you may, will no perfume go forth? The words of the old Book are true, "Ointment in the hand betrayeth itself." The aroma of your moral life will go out. You may guard your lips, you may shape with minutest care your acts, but your inner life will go out and some one will be touched and shaped by it.

Here is a new and intense meaning given to every man's life. It is not in most cases so much what he does or what he says that make his influence—it is what he *is*. That which is within he can not by all his power keep from going forth. He can not help it if he would. It streams out from him like the unseen magnetism that it is.

Every man is perpetually at work, not only in hours when he purposely puts forth his powers, but when most of all he is thoughtless of it. Indeed, the thoughtless hour may be the hour of most lasting power, since it gives the truest revelation and throws out the most subtile influence.

Responsibility goes farther than most men imagine. It does not end with words and acts. He is responsible for what is within, since that will inevitably go forth for good or ill.

That unintended power is often the truest influence of the man, as it is the mightiest. It may be the reverse of what he wishes it to be. His words, his acts may be in one direction, while the influence of his inner self stretches out in another. Many a parent *lives down* all his most carefully inculcated lessons. His silent life is mightier than his spoken words.

What we want is to *be* right within.

Do not complain that *Life is short*, but employ time usefully.

STOLEN FLOWERS.

On the 9th of June a boy, who gave his name as John Lintott, age unknown, but supposed over twelve, with long matted hair, and with hands and features almost untraceable through the dirt by which they were begrimed, was brought before Mr. Vaughan, magistrate, At Bow Street, London, charged with being found in Somerset Street, Strand with a box of flowers in his possession, supposed to have been stolen.

Police-constable Sergeant, E division, stopped the boy at twelve o'clock at night. He said a chap gave him the box to take to a coffee-house in Hart Street; but he was walking in the opposite direction.

It was found that the box contained cut flowers, worth two guineas, and had been stolen from a van belonging to Mr. Reeve, florist, Acton.

Mr. Vaughan (*to prisoner*). "Where do you live?"

Prisoner. "I don't live nowhere."

Mr. Vaughan. "Have you no friends in London?"

Prisoner. "No; I ain't got no friends."

Mr. Vaughan. "But where do you sleep at night?"

Prisoner. "Under the show-board agin the Lyceum Theayter."

Mr. Vaughan. "What does he say?"

Jailer. "He says he sleeps under the large posting-board in front of the Lyceum Theatre."

Mr. Vaughan. "Do you mean, boy, that you sleep there every night?"

Prisoner. "No; I don't sleep there every night. Sometimes I gits under other boards."

Mr. Vaughan. "But have you no home, no father or mother?"

Prisoner. "I has a father and mother, but they won't let me go home. When I goes home they turn me out again. Father says he won't have me there."

Mr. Vaughan. "Why does he refuse to have you there?"

Prisoner. "'Cause I stopped out two or three nights. Then he wouldn't never take me back again."

Mr. Vaughan. "Where does he live?"

Prisoner. "Over a boot-shop in Red Lion Street. I don't know the number."

Mr. Vaughan. "What is your father? Where does he work?"

Prisoner. "In Common Garden Market."

Jailer. "He is a porter in the market, your worship."

The prisoner was then remanded for a week.

Shortly before this incident occured I had been wandering for a few days amid the beauties of embowered Surrey, losing myself amid the floral seas that surround Deepdene, and gathering wild flowers in the woods near Godalming. When I reached Waterloo Station, on my return, I bore quantities of these flowers in my hand, and in all the by-ways through which I passed on my way home I was surrounded by ragged and filthy children, each pleading for a flower. One or two pale-faced girls overcame the grasp with which I held on to my beauties; but for the rest I stopped my ears with the maxim that charity begins at home and pressed on. It took only two days for my flowers to wither; and, now that I have read the dialogue that occured between John Lintott and the magistrate, I begin to wish that I had disposed of my flowers a little differently. Might I not have put them into a new blossoming by making each call a smile of delight to one of those children inured to want and dirt; might I not have made them enduring bud. I associated them with little faces made happier! And what might not one of the flowers have meant for the poor child clutching after it? A smile of God through the darkness of poverty and sin it may be—a radiance such as falls for me from Raphael's Madonna.

But may it not be that the ragged John Lintott merely meant to sell the flowers? It may be so; but it is doubtful, and I give Johnny the benefit of the doubt. I put the question to one who knows much about our street Arabs. "Don't know," was the reply; "these ragamuffins are always mad after flowers." Moreover, there were as many vegetables as roses at the spot whence the flowers were stolen.

Mad after flowers, then, is this wretched, dirt-grimed child of thirteen. Can a woman forget her child? Father and mother abandoned little John to find his only bed on the stone which the high porch of the Lyceum Theatre shelters. He "ain't got no friends." But one day the flowers may have (who knows?) smiled on him with something of a mother's smile, and the roses said, Poor Johnny, we are your friends! So he hears, and remembers; and in the hour of midnight he creeps from his show-board covert on the pavement, lies him in the darkness to the van of roses awaiting the morning market, and clasps his friends to bear them—whither? Heaven knows! "I don't live nowhere," says John.

I can imagine that in certain far away ages and climes such an incident would have called some artist to this child's cell in the station-house; but properity stands for more than the love of beauty in England; and if the child of thirteen is permitted to ignore its laws, as defined by the Lord Chancellor, the same ignorance may be pleaded by the Artful Dodger. Nevertheless, those whose universe admits other considerations than the rules of *meum* and *tuum* can not help reflecting that it were almost as bad that John Lintott should be denied sunshine as that he should be denied flowers, or at least, that beauty which the flowers signify. The wretched boy—yes, every boy and girl who is begging flowers this moment about Covent Garden—is a bundle of unsatisfied hunger; and where the skinny little hand passes by this or that exposed edible to purloin a flower, there is a hunger that may be for a half-penny, but again may be for what is highest and noblest. It is of such stuff as this last that artists are made. I once heard a philosopher claim that all human beings were poets, because they loved fables. I will claim that these London Arabs are artists, because no one can walk through the streets with a flower in his hand without being asked for it, in pleading tones, twenty times where he will be asked for a penny once.

I sometimes wonder whether well to-do people ever really see a flower. Flowers are very mystical things. The daughter of Linnæus declared that she saw hovering just over a flower its spirit, as a delicate flame. Had the great botanist's passion for flowers re-appeared in his daughter as a second sense? And may it be that some such second sense is enlisted when pure beauty is looked at from the nethermost region of ugliness? If from the bottom of a deep well the uplooking eye can see the stars at mid-day, may it not be that from amid dirt and filth and haggard dismalness there may be a radiance about these petals beyond that with which the sun can tint them, and beyond what people who live among comfort and pictures, or even with bright wall-paper around them, and carpets beneath them, can discern? It might be that Millais and Rossetti would give a great deal to see the hues of nature from the John Lintott point of view, if they know more about it. But as few of us can get all the glimpses and revelations that visit the midnight passed under the show-board covert on the pavement fronting the Lyceum Theatre, let us try if we can not interpret flower language a little better by the light of our lad's story.

It is common to point to flowers as final answers to utilitarianism. J. R. Lowell has told us of those practical questions which would abolish the rose and be answered triumphantly by the cabbage. All very true; but, may not one question whether the flowers were really meant to be as useless as we make them out? No doubt their use is very different from that of the cabbage. One can heartily respond to Leigh Hunt's claim for them—

"Uselessness divinest,
Of a use the finest;"

but at the same time one may have a misgiving that we do not put them to the finest uses when we cut them for bouquets and adorn our rooms with them. The ancients made a religious use of flowers, as chaplets, altar decorations and as symbols of particular gods and goddesses. Each flower preserved a divine myth. The tradition of their sanctity passed to the Christian convents, and many of our exotics would never have reached us but for their assiduous cultivation within monastic walls. The rosary in the transfiguration of roses into prayers; and one of the noblest of Persian sacred books is the Gulistan, or Rose Garden. Sheik Saadi walked with his friend in a beautiful garden. "It was the season of spring; the air was temperate, and the rose in full bloom. The vestments of the trees resembled the festive garments of the fortunate. It was mid-spring, when the nightingales were chanting from the pulpits of the branches; the rose decked with pearly dew, like blushes on the cheek of a chiding mistress. You would have said that the knot of the Pleiades was suspended from the branch of the vine. Under the shade of its trees Zephyr had spread the variegated carpet. I saw in my friend's lap a collection of roses, odoriferous herbs, and hyacinths, which he had intended to carry into town. I said, 'You are not ignorant that the flower soon fadeth, and the enjoyment of the rose is of short continuance; and the sages have declared that the heart ought not to be set upon anything that is transitory.' He asked, 'What course is there to be pursued?' I replied, 'I am able to form a book of roses, whose spring the autumn blast can not injure. What benefit from a basket of flowers? Carry a leaf from my garden.' Saadi's friend cast away his flowers. 'Whilst the rose was yet in bloom the book entitled the Rose Garden was finished.'" From this book the dervishes get their hymns to-day, and the people say each sentence of it has seven meanings.

Shall we say that, while carrying horticulture so far, we have not been able to transform our flowers yet into transcendent rosaries and rose gardens? I fear not. Poor little John would not be so starven in heart and mind if we had learned all the charity there is in a rose. The flowers are but wasted in ball-rooms if they might be carrying tender messages from God to hearts to which earth refuses friends, and even mothers and fathers refuse a home. It is very sad that any box of flowers which a boy of thirteen could carry should be worth over ten dollars in gold. Flowers ought not to be such luxuries, but they are. And how can the case be bettered? We may and should make more use of flowers in adorning our churches, making of them a perpetual sacrament on the altar, and twining them about our creeds and dogmas. We might do much, too, by seeing that they should be planted in every nook of the city where they will grow. But the real satisfaction for poor Johnny's craving is, I suspect to open an eye in him which can see flowers, more within his reach than those of the Action van. To his somewhat savage taste Beauty has now to appeal in her most obvious and plain spoken form. There may be doubt in his mind about the beauty of honesty and truth, but none of the color and fragance of flowers. But Mr. Ruskin tells us of a boy who grew up not fifty yards from where John Lintott purloined flowers, under whose eye and paint-brush the very cabbage leaves and incidental litter of Covent Garden Market became glorious, and all the castaway orange peel was raised to Hesperian gardens, and London fog became spiritual. Every poor lad that wanders about the purlieus around Covent Garden can not, indeed become a Turner; but by true care taken of him—half as much, say, as Mr. Reeve, florist bestowed on those stolen flowers—every lad might be taught to see blossoms in earth, in sky, lustres in human faces, now covered over by ignorance as thick as the dirt on his face. Every where, indeed, are flowers abloom. Wren and Barry saw them in parterres on the cornices of old buildings; Charles Dickens gathered them by handfuls from the dens of thieves. Will an age of humanical-ture follow this of horticulture, which shall train your little Lintotts to withhold their hands from forbidden flowers, and answer their craving for the beautiful by training within them honesty, truth, sympathy, and hope? Every flower is a prophet of the Divine benevolence, and calls man to rise to the sacred circle of charity. Each says to the lowly listener at its feet, Strive to add some bloom to human pathways, and be sure that there is no heart so poor that it will not leap in response to every smile and every kindness bestowed upon it. The art of making others happy—that is the great art. Such is the sense of the flowers.

THE BURDETT

CASES NEAT and DURABLE. INTERIOR WORK Unequalled.

ORGAN.

What they are thought of by the leading organists of the Pacific Coast.

"Superior to any instrument of their kind."
Mr. GEO. T. EVANS, the well known Composer, and Organist of the Church of the Advent, S. F.

"Recommend the Burdett for superiority of tone, delicacy and power, and in every respect far ahead of all other reed instruments."
Mr S. D. MAYER, Organist of St John's Church, Oakland, Cal

"After trying the Burdett, I take great pleasure in adding my voice to the many already sounding their praise."
Mr. H. M. BOSWORTH, Organist of Calvary Church, S. F.

"Far ahead of all I have ever heard or tried."
J. W. C. RHIND, Organist of Howard Street M. E. Church, S. F.

"Examining the "Burdett Organs" I was greatly and agreeably surprised at finding such variety, delicacy and power."
R. J. McCABE, Organist St. Francis Church, S. F.

"Consider the Burdett the finest of reed organs"
CHAS. H. HOFFMAN, Organist of the Mason Street Synagogue

"The most effective reed instrument for Church, School or Parlor."
J. MULLER, Organist St. Ignatius Church, S. F.

"A decided novelty and great improvement on the many styles now in use."
GEO. SCHUCKE, Organist of the Methodist Church, San Jose

"Surpassed my expectations of a reed instrument and, comprises everything needed from the solemn music of the church to the popular music of the day"
EVERETT POMEROY, Organist of the Presbyterian Church, San Jose

"They excel anything of the kind I have ever seen before."
Mr. JAMES LAWRIE, Santa Clara

"Their volume and purity of sound is far superior to any reed instrument I have ever seen, and combinations most perfect."
D. H. BERLIN, Professor of Music, Stockton

"The combinations, power and delicacy in all sizes are surprising, and I cheerfully recommend the Burdett."
W. CARMICHAEL, Organist of St Mary's Church, Stockton.

MILLS' SEMINARY,

REV. C. T. MILLS AND WIFE, FOR THE PAST six years Principles of the Young Ladies' Seminary at BENICIA, are happy to announce to their patrons and friends that the next term of their well-known Institution will open

Wednesday, Aug. 2d,

In their NEW, COMMODIOUS AND BEAUTIFUL BUILDING just completed at

SEMINARY PARK, BROOKLYN.

As most of the able and experienced corps of teachers, with valuable accessions, as well as the fine classes of pupils now pursuing their studies, remove with them, the school remains essentially unchanged.

With greatly increased facilities for physical comfort and intellectual culture, and without additional expense, Mr. and Mrs. Mills believe they can accomplish much more for their pupils in the future, than they have been able to do in the past, and that their Institution offers unrivalled advantages for a thorough and finished education.

All communications relating to admission, and all letters of inquiry, should be addressed to

REV. C. T. MILLS, D. D.,
35.23 Brooklyn, Alameda county, California.

Santa Clara College, S. J.

SANTA CLARA, CAL.

Conducted by the fathers of the Society of Jesus

THE TWENTY-FIRST ANNUAL SESSION OF THIS Institution will commence on MONDAY, August 7th, 1871.

TERMS—Tuition in the Classical and Scientific Departments; Boarding and Lodging; Washing and Mending of articles; School Stationery; Medical Attendance and Medicines; Fuel, Light, Baths, etc., per session of Ten Months, ... $350

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Maraschi, S. J., St. Ignatius Church, Market street, between Fourth and Fifth, San Francisco,

Miscellany.

AN UNEQUALLED MUSEUM.

William Beckford was said to have had a service of porcelain for every day in the year. This "Prince of Dilettanti," the scholarly, but, eccentric, author of "Vathek," seems to have no parallel in history; no similar instance where absorbing passions have been allied with equally great opportunities for their gratification. He inherited a vast fortune. Byron names him, in "Childe Harold," as "England's wealthiest son." After passing a portion of his life amid exciting and moral pleasures, he retired to his father's estate at Fonthill, and devoted himself to the erection and embellishment of a palace which, in its day, was one of the world's wonders. Its grounds covered twenty thousand acres, and were more highly cultivated than the gardens of Versailles; the building covered more space than the York Minister, the largest cathedral in England, and its shape was as if two buildings like Westminster Abbey were placed across each other, the spaces filled up by various offices. Into this spacious museum, nothing was received whose merits were not of transcendent value. Its books, in many tongues, were the rarest editions, clad in choicest bindings; the pictures were the noblest specimens of art. One room in this palace was declared to be richer than the whole of the National Gallery. Matchless china, coffers, and unique pieces of plate from the hand of Benvenuto Cellini, gems and intaglios from the rarest gravers, antiques antiqued and retaining their pristine beauty, gorgeous tapestries and invaluable cabinets, were a few of the treasures. All was held by a visitor, who gained the unusual privilege to examine this museum; "I would defy any man, however sober and taciturn his habits, to proceed from end to end of one of these sumptuous galleries without uttering some exclamations of admiration; for whatever be the hobby he is in the habit of riding, he is sure of finding something in his own way; the variety is infinite. Here Beckford lived twenty years in complete seclusion, always actively and happily employed, until the loss, by an unfavorable decision in chancery, of a valuable property in the West Indies, compelled him to retrench his expenses and quit the Abbey, which cost him £30,000 a year to maintain. He always affirmed that he left this home without regret. Still possessed of large wealth, at the age of sixty-three he removed to Bath, with a selection of his most precious objects, and there built another palace, in which he passed the remaining twenty years of his life, surrounded by his collections, which he continued to augment till his death. The glories of Fonthill Abbey have long since departed, and the building, which cost the pretty sum of £273,000 eventually became a shawl manufactory.—*From "Hobbies and Their Riders," in the Overland Monthly for September.*

BAMBOO SHODDY FOR CLOTHING.

The *Journal of Applied Chemistry* says: It is well known that in St. Domingo and other West India islands, the bamboo grows luxuriently, and may be set down as a waste product. As the fiber is excellent, numerous attempts have been made to convert it into stock for paper, and no doubt if it were nearer a market, this use for it would soon become a lucrative one. We now hear of cloths manufactured out of a mixture of bamboo and wool, cotton or silk. The bamboo is prepared very much in the same way as straw, by boiling for several hours in water probably containing alkali. It is then run through heavy rollers and subsequently through a pitcher, which reduces it to a fiber. The fiber is then in a condition for being carded and dyed, ready for mixing with other stock. We have seen specimens of cloth made by adding various proportions of the bamboo.

Cotton warp and cloth containing 50 per cent. of bamboo in filling was strong and capable of taking a fine dye. A silk mixed cassimere, in mixed 25 per cent. of bamboo fiber with warp and filling, also looked well. The dyed fiber closely resembled wool to the unmillated, and the undyed looked as if it could be used for false calf, if it could be made long enough. It would be curious if some good fairy came out of the St. Domingo controversy, in the shape of a new industrial product.

HELIOGRAPHIC PRINTING.

A patent has been recently granted in England, which consists in an improved method of preparing caseine of curd of milk for subsequent use in the formation of casting blocks, printing blocks, and in preparing the surfaces of paper. The inventor take milk which has become sour and set by keeping, and separates from it the grease and other extractive matters by the following process: The milk is churned when sour and set by natural causes, and put into a bag and allowed to drain for about twenty-four hours; boiling water is then poured on it, and it is subjected to a squeezing process. After this the best result is obtained by pouring water at about half boiling temperature on it. It is again squeezed and allowed to stand till it has cooled down, and then washed well in clean cold water, with continuous squeezing to remove all the grease and milk they can. When dry, the residuum becomes hard and granular, and is the substance or caseine which is the object of the invention.

The following, clipped from an exchange, is to good to be lost:

"A Toledo German, who has been keeping a saloon for the accommodation of Printers, has been obliged to suspend. On his books were found the following named members of the craft: 'Der Laim Brinter,' 'Der Leettle,' 'Der Pea Putter Brinter,' 'Der Firth,' 'Der Brinter mit der red hair,' 'Der Brinter mit hair but shoost so red.'"

Louisiana wants a thousand more coolies. On account of the warm weather, probably.

Valuable Stock Ranch

FOR SALE—A BARGAIN.

A Large and Valuable and well located Ranch of FOUR THOUSAND ACRES, all fine level land and well adapted to Wheat and Grain growing or pasturage of Stock, here even in this dry season the feed is good, and animals upon it are now doing well.

There is now on the Ranch 3500 Sheep, four Horses, four Cows and Heifers, together with Wagons, Plows and every Farming Implement needed to carry on the Ranch.

The Ranch is situated 23 miles south of the New Town, recently located by the San Joaquin Valley R. R. Co., on Bear Creek, directly on the line of the Railroad. The work between said New town and Modesto is rapidly approaching completion and Cars will be running to Bear Creek in thirty da

There is upon the Ranch a Good House, Barn, Wells of Water, all fenced in. The Ranch, with all improvements, will be sold at a VERY GREAT BARGAIN if the owner desires to change his location, having other business to attend to.

The Sheep will be leased on shares as agreed upon.

The terms of Sale will be ONE-THIRD Cash balance one and two years, interest at 10 per cent. per annum

To any person who desires to engage in STOCKRAISING or GENERAL FARMING, this is an opportunity rarely to be found. Early application will secure a great bargain, as the whole will be sold at the nominal value of unimproved lands.

For Particulars Address,
C. W. STEVENS, Proprietor, on the Ranch,
or call on the Editor of the Farmer.

A small lot of very choice Tea Seed just received from Japan.

This is new seed and very sure to grow. To be had at the FARMER OFFICE,

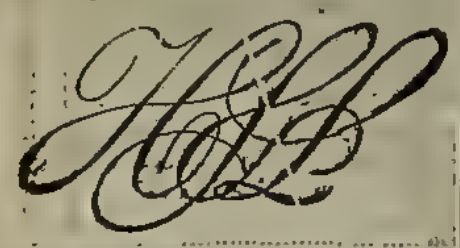
320 Clay Street, San Francisco.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE



This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attach as to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Gum or Comb.

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, its liquifying point being 200 degrees; it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H. & L.,

Is on the red cover of the package

Corrected Weekly, by Editor Farmer.

San Francisco, August 31st.

Money and Exchange Table.

Exchange on England 109½x109¾
Price of Gold 112¾
Value of Greenbacks ..... 89c@89½
Value of Wheat in Liverpool ..... 11s. 8d.
do do New York ..... 145c@160 bush

Price of Money in Eastern Cities.

New York—Money very abundant and rates as low as 2@3 per cent. per annum on call, at 4@6 on time paper.

Boston—Money very plenty, 3@5 per cent. on call, 6@8 on time.

Chicago—Money capital employed 4@6 per cent. on call, 8@8 on time.

Money in England.

Bank of England rates 2 to 2½ per cent, heavy supplies, money very easy in business circles.

Money in France.

Money in the form of Gold is now showing very abundantly, the people among the lower classes offering Government all it wants to pay the Prussian Indemnity.

GRAIN AND FLOUR MARKET.

The Grain markets the last week or ten days has been under some little excitement, by reason of a speculative movement that has gained some degree of force by reason of a rise of a few pennies in England, but not as we esteem to be a real advance, besides the advance here in our own markets arises more from a haste by our Exporters to gather up what there is in our markets now, to load a few ships that can be had at extremely low rates of freight as that it enables them to purchase even at over market values, rather than run any risk of waiting to scan the market or go into the country where there is a plenty of wheat. Such action on the part of purchasers give rise to a speculative feeling now, and an advance in rates which we do not believe will long be maintained. We believe there is more grain on hand in the country than there was supposed to be, and as holders of this grain *can afford to keep it*, it has not been offered, and as soon as the facts are well understood that grain *will not* rise very materially, then this Stock on hand will appear in market, our firm belief is that the price will recede.

The *Flour* trade with China will be a permanent one for all coming years, and each year it will steadily increase, the *future* of this trade with China no one can conceive.

Barley, Oats and Corn each and all have had a quiet steady trade for the last week—while other small grains have had only a small or nominal demand.

Potatoes, Beans, and Onions and other products of home trade have been about as usual in all their ups and down as the spirit of speculation or steady demand affects rates.

Wool, Tallow, Hides etc.

The Wool market has a real basis of value, arising from a quick market and ready purchasers abroad, while all other markets are high and advancing, which secures high prices for all our Fall clip and all on hand. Our market is also receiving quite an amount of Australian wool, which has paid well to import.

Cosmopolitan Hotel,

San Francisco,

CHANGE OF PROPRIETORSHIP

H. H. PEARSON,

LATE OF THE RUSS HOUSE,

Having bought the interest of Messrs. Tubbs & Patten, of the Cosmopolitan Hotel, has secured a lease for a term of years of this well known and elegantly furnished Hotel. His previous reputation assures it being kept in first class style, while in order to keep pace with the times he intends to make important reductions in the scale of charges. His intention is to make it a family and business house, while his large connection with the travelling public warrants him in expecting a large amount of country, Pacific coast and Eastern patronage.

The prices will range from two to three dollars a day for ordinary accommodation. Board by the week or month as per contract. The table will be kept on the most liberal scale and many improvements introduced. The spacious reading room is the finest of its kind in the city, while the furniture and fittings generally are superior to those of any hotel in San Francisco. The house will be thoroughly overhauled

Mr. PEARSON assumes proprietorship this day, August 1st. 366

Every Thursday and Mailed Friday's at $4.00 per year in advance, when payments are delayed $1 will be added.

REDUCTION IN PRICE

AND

Liberal Club List

With a desire to place the CALIFORNIA FARMER in every family on this Coast we have concluded to make a

Liberal Reduction in Price,

and to place it at such a sum as that every Cultivator of the soil could have it.

We have announced the Terms in another column, and here we give additional inducements to our patrons and friends to not only subscribe for the Farmer, but to secure other valuable Publications at a moderate price also.

We make this announcement for the express purpose of meeting the wants of a large increasing Agricultural population, and a large emigration that will soon be coming to our shores, who need the information of our resources, and we feel we can serve our State in no better way than to give to these new comers the

CALIFORNIA FARMER

at a very reasonable sum, so that every family can have a copy.

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar, $18,50

The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid $7,50

The CALIFORNIA FARMER and the New York Weekly Tribune, $5,50

The CALIFORNIA FARMER and the American Agriculturist, $5,00

The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life," $6,00

The CALIFORNIA FARMER and the Phrenological Journal of New York now in its 50th Volume, $6,00

The CALIFORNIA FARMER and the American Stock Journal, $5,00

The CALIFORNIA FARMER and the Overland Monthly, $7,00

The CALIFORNIA FARMER, and the Atlantic Monthly, $7,00

Paris, August 12.

AGRICULTURAL LOSSES BY THE WAR.

The Agricultural community of the thirty departments that have borne the brunt of the invasion, are most occupied at present with the question of being indemnified for their losses out of the exchequer, and demanding nearly one million of francs to satisfy present claims. The departments not invaded, oppose through their representatives this demand, forgetting that as France entire is made responsible for the war, the nation entire ought to pay. The invaded departments sustained the shock to defend the country, and he or and morality insist that they should be loyally reimbursed. It is a right that the present emptiness of the Treasury coffers may plead delay in meeting, but cannot destroy. It was only in 1840, that French farmers were indemnified for the ravages of the invasion of 1614-5. In a townland in the mountainous district of the Vosges, with a population of 21,000 the damages are estimated at eight francs per inhabitant—it supplied 2,000 men to the army, having had to pay the expenses of their outfit in addition.

TAXATION, HARVEST, CATTLE PLAGUE

Anxiety is less feverish on the subject of the new taxes, since the country has clearly declared against the doctrine of protection. It would never do to saddle with increased tariff the 300 Agricultural products subjected to taxation. France cannot consume all she produces, and an external market is for her a necessity. Before the duty on salt was lowered, Agriculture had to economize by using less of it, and the revenue to-day has not suffered by the diminution. It is proposed to strike imported bones with a tax of 20 per cent., so that for her sugar refineries, France will have to compete with the markets of La Plata, Spain and Italy, with England, Belgium, &c., where a nominal duty only exist. But more, the animal black after being employed in the refinery sells for 18 frs. the hectolitre, as a manure, which would be proportionally increased.

The harvest has generally commenced, and the wheat crop if not as good as formerly, might have been worse. The weather though unfavorable, has still given long spells of sunshine. Rye as usual has been the first to come under the sickle, and bread from this year's harvest of wheat and rye is in general consumption now in Paris. The root crops are magnificent, but were never known to be so infested with weeds—hands were not obtainable to destroy these. The cattle plague commits still terrible ravages, but is on a decline, owing to the vigorous measures taken by the authorities to have slaughtered at once animals infected, paying of course their value to proprietors. On the Belgium frontier it is the soldiers who form the *cordon sanitaire*, and here kept the enemy within his own lines. All dogs running the gauntlet are shot—they are among the most active propagators of the plague. The formalities of the transport of stock are so rigorous that the markets are not fully supplied with meat, and in Paris fresh beef is rapidly becoming a luxury, while in certain districts its price is next to nominal. Britany is the chief centre for the supply of live stock for breeding or the butcher. The cows though small are excellent—sell from 120 to 125 francs—yield 12 to 16 quarts of rich milk daily, fattening at the same time, and when slaughtered weigh ove three hundred weight. They are small feeders, and remarkably exempt from disease. Bullocks on foot fetch 500 francs and weigh 18 cwt. The sheep of Britany are a peculiar race—that called the "toins"—for the ewes have universally two lambs—is very strong and rarely attacked with any ailment. Their average price is about 30 francs.

CROPS CULTIVATED, HORSE BREEDING.

The cultivation of maize is receiving considerable attention. The experiments made to raise the plants in a nursery, and dibble them out, have not succeeded—the stem was found to be developed at the expense of the grain. Fifteen or twenty days before the corn is ripe, when the ears commence to take a yellow tinge, the leaves are cut off—not plucked—bound in small bundles, and stored for provender. In Alsace, quick growing plants are "intercalated" with the maize—such as the kidney beans—the rows of maize being a yard asunder. The dwarf variety is often succeeded by climbing varieties. Potatoes, beets, turnips and dwarf peas are preferred to the intervals in Hungary and Croatia—in Styria sorgho is selected, While in Italy and the Valley of the Rhone pumpkins are raised, on which cattle and pigs are fed. "Blacks" rarely attack the maize plant in France, but it is very common in Italy where the soil is subjected to irrigation.

Belgium after the rinderpest is most occupied with the decline in horse breeding. Her large draught horses are in such request by foreigners that the exportation has largely denuded the country. The government has had to come to the rescue by renewing the subsidies for the breeding of the noble animal. It has been decided to maintain the native race distinct, and raise a cross breed for light draught and cavalry purposes. The supply of stallions is short, and the authorities propose buying some, and stabling them in certain localities, charging nothing for their services. France also is deficient in horses and seems inclined to leave the supplying of the deficiency to private enterprize, as the aid to the State breeding studs, is being gradually withdrawn. The country possesses three millions of horses, and requires a tenth of this number to be received every year to keep up the total average. The stallions count 12,000, and a third at least o the number would require to be of excellent breed to effect any sensible improvement. Germany sent 330,000 horses into France during the campaign—as a rule beautiful animals, very much superior to any France opposed to her.

[*Concluded next Week.*]

THE LONDON UNDERGROUND RAILROAD.

The idea of carrying intramural railways underground was a fortunate conception for London. That such a thing was practicable, could only be demonstrated by actually doing it. It has been done by Mr Fowler in an extent which gives him a foremost place among engineers. To carry a line across Chat Moss were a simpler matter, despite its stupendous scale, than to drive a tunnel through the entanglements of gas and water mains, sewers, cellars, subways, and foundations, which form a species of jungle in the underground topography of the metropolis. Every inch of the way is beset with difficulties, something like those that encompass the surgeon in seeking to perform some delicate operation amid the mazes of arteries and organs which crowd the anatomy of the the human body. The works of the underground railway are not merely complicated, but great strength is required in most of the structural parts; the burden in some instances being enormous. What is to be thought of carrying the railway below the vaults and subways of Queen-Victoria Street; one set of girders being required to support the vaults and subways above the railway, and another set of girders to support the road above the subways! In some parts of the line, the breaking weight of each column is estimated at 3,000 tons. Even the church of St. Nicholas is supported by the works connected with the railway, the original foundations of the edifice being extended downward for a depth of 40 feet. These and numerous other facts connected with the undertaking mark its peculiar character, and establish its claim to be considered an extraordinary engineering achievement. When the Metropolitan Railway from Farringdon Road to Paddington was first opened, trains ran at intervals of twenty minutes; now it is a common occurrence for thirty trains to pass a given point within an hour. In 1863, the Metropolitan Railway carried 9,466,176 passengers; in 1870, the number carried on the Metropolitan and Metropolitan District railways was 39,100,849. The receipts on the District line have increased in very high ratio within the last twelve months; and the extension to the Mansion House will unquestionably have a great effect in augmenting the traffic. Facilities for traveling always increase the number of travellers, and the contrary effect reacts on the cause."

REST.

(*A Grand Lecture from a English Journal.*)

There comes a time in a man's life when he looks out for pauses and periods of rest. There is a time when a man is overflowing with energy. He both finds work and makes work. He cuts down trees in the forest of difficulty. He fights with windmills. He sketches out a programme which it would take several lifetimes to encompass. He puts no limit to his energies or his range of possibilities. By-and-by a man finds that his sphere is strictly limited and defined. He seeks to curtail rather than extend his engagements. He no longer thinks that he can know every body and go everywhere, but recognizes that in fact he can, comparatively, only know few persons and go to a few places. He understands small economies of time and circumstances. He appreciates the *laisser faire*. He has a growing opinion in favor of holidays. Instead of being always busy, he appreciates pauses from business. He studies to be quiet. He begins to think that speech is silvern and silence is golden. He appreciates rest. He appreciates rest if it is only for the sake of work, according to the laws of action and reaction. Hence, if you can economize seasons of rest you secure opportunities of work. In New York every man seems in a hurry, and every man has his programme too full. You note the New Yorker's short, quick and somewhat impatient walk. If he goes out to dinner, he has been working up to the last minute; at a place of amusement he is too thoroughly tired to enjoy himself; even on a holiday he is busy with his schemes of work: A man can do justice to dinner, holiday, or concert when his most pressing need is that he should lie upon a sofa or go to bed. Hence come nervousness, indigestion, bad nights, fatty degeneration, and all kinds of horrors. I remonstrated with a man the other day on his childishness in stopping to look at the shop windows. He might have answered that to look at the shop windows was itself part of a liberal education. But he told me that he was in the habit of walking a great deal too fast, and consequently he would every now and then bring himself to anchor in front of a shop window, and counted the rest as gain. The taste for rest grows with our growth in wisdom. A child can not understand it. When a child is told that his father or mother wants to be quiet, the sentence is a wonderment to him. Mrs. Schimmelpennick says, that when she was a child of six, her parents taught her to fold her hands and be quiet for half an hour. This valuable art might be taught at our schools, even if charged for as an extra. The taste for quiet and thoughtfulness ought to be developed as much as any other taste. Rest is an investment for new action. It is also rather a true element in good workmanship. An editor once told me that though his town contributors sent him the brightest papers, he always detected a peculiar mellowness and finish about the men who wrote in the country. I know an important Crown official, whose hours were from 10 to 3. He had to sign his name to papers; and as a great deal depended upon his signature, he was very cautious and chary how he gave it. After 3 o'clock struck, beseeching powers of suitors or solicitors could not induce him to do a stroke of work. He would not contaminate the quality of his work by doing too much of it. He would not impair his rest by continuing his work. And so he fulfilled the duties of his office for exactly fifty years before he retired on full pay from the service of his country. And when impatient people blame lawyers for being slow, and offices for closing punctually, and shops for shutting early and, generally speaking, the wider adaptations of our day to periods of holiday and rest, they should recollect that these things are the lessons of experience and the philosophy of society and life.

A PREACH TO PREACHERS.

All apologies are founded in self-deception or pride.

Move directly to your subject; the sooner you get at the main idea, the better.

One telling illustration is better than a dozen, even if each of the dozen are quite as strong.

Let the subject be of such importance as to invest you with an inspiration, until the closing sentence.

Encourage, rather than scold.

Do not make many points; two or three well insisted on will be longer remembered than half a dozen.

Never think of yourself, but of a soul saved or lost, and Calvary.

Have only two or three headings and one application—clear, short, and to the point, still be ringing in the ears of the people as they are dispersing.

If you cannot preach from a text without an intimation that a different translation would improve it, select some other passage, or a different subject.

Feel that this sermon may be your last.

[*Selected.*

WHEAT DEVASTATING BUG.

John B. Barbour, Vermont Mo., sends specimens of which were sent in a bottle. The bugs had destroyed thousands of acres of corn, wheat and oats, and he wanted a remedy for them. They were identified as chinch bugs—*Lygæus leucopterus*. No mode of destroying them was known to the members. Mr. Bradgon had known Western farmers to plow deep furrows around fields threatened with their ravages and thus check their migration. They get into the ditches, and if the land-side of the plow is run next to the field to be protected, they cannot climb the acclivity, and may be destroyed. Has known crops to be saved. Corn fields have been saved by sowing a wide strip of millet about the outer edges. The bugs satisfy their appetites in the millet before they get to the corn. Lands where these bugs ravage should be burned over in the autumn—wheat and oat stubble and corn stalks. The corners of the fences should be cleaned and all possible shelter for them removed.

COLORADO POTATO BUG.

D. C. Whitney, East Saginaw, Mich., sends a sample of the Colorado potato bug—which he supposes may be a curiosity—that members may know it when they see it. The members, several of them, protest against this mode of disseminating these pests throughout the country. They were in a paper box and alive. No one knows how many of these had escaped *en route* hither. One member prop sed the appointment of a committee to destroy them. They were carefully corked up in a bottle of alcohol. And that is the way all such noxious insects should be sent from one section of the county to another.

KILLING POPLAR AND LOCUST SPROUTS.

V. S. Crozier, Port Byron, N. Y., wrote:—"I have a number of popular trees in my yard, and am troubled very much with sprouts from the roots. Cutting them off or digging them up only gives me ten where I had one before. Is there any liquid which will kill them by turning around the roots? Can you suggest a remedy?" Mr. Fuller says cutting as often and as soon as they appear above ground has always resulted satisfactorily with him. They should not be allowed to grow a month or two before cutting. One year's persistent defoliation will prevent sprouting the second year.—*Practical Farmer.*

COTSWOLD SHEEP.

Messrs. Jones & Clark, of Barre, Vt., write to the *Mirror and Farmer* that their Cotswold lambs were dropped the last of March and first of April, some of them weighing 12¾ pounds; the 20th of June they weighed 75 pounds. Yearling ewes, this spring, had wool 12 inches long, and crosses with Merinos showed a length of staple 7 inches. They sold a Cotswold lamb last fall to one of their neighbors to cross with fine wools, and he has already, at this time of year, been offered $4 per head for his lambs for mutton. The lambs were dropped the first of April.

So much has been said against crosses with fine wools that we have experimented until we have become satisfied that with the *right care* and *blood* for a buck, it will prove a perfect success for mutton, also for wool, as it is fine and of good length. Our ewes averaged six pounds of washed wool; have sent it to Boston for combing. The buck that sired our lambs sheared 15½ pounds and weighs over 300 pounds.

SCAB IN SHEEP.

Petroleum, in its crude state, applied to the points of attack, will effectually kill the insect that originates the scab and the eggs or nits which it lodges in the wool. The remedy is a safe and cheap one, and a sure cure. Kerosene might answer as well, used in moderate quantities. The flocks of California are generally inoculated with scab; and were it not for the alkali water and dust that floats in the air and lodges in the wool, which often checks the ravages of scab, and sometimes kills it out entirely, we should be compelled to abandon the sheep and wool culture altogether. The cheap remedy alluded to above, will be a benefit to the animal, and to wool-growers generally, if used. The application of mercury, arsenic and other narcotics, are injurious to man and beast.—S. W. J. in the *New Yorker*.

The *Poultry Bulletin* says: "Every bird pleases us with its lay, especially the hen." The same here; particularly when they keep up a kind of rattling fire, like that opened last week by a hen belonging to Dr. S. P. Huntly, of Muncie, Ind., which laid a large egg, and in fifteen or twenty minutes two more, joined by a ligament one inch thick, and three-eighths of an inch long. We consider that discharge of chain-shot decidedly *fowl* play.

LARGE HONEY PRODUCT

Rev. Robert Johnson, of Kossuth, Des Moines Co., Iowa, reports to the Department of Agriculture, that he has colonies of bees that gave him 150 pounds of honey each during the past year.

WALTAR BROWN & SON'S MONTHLY WOOL CIRCULAR.

New York, September, 1871.

Since our last report the Wool Market has evinced quite a mercurial disposition. At the opening of the month there was moderate activity in all descriptions, the principal inquiry, however being for medium and low Wools. Later the unsatisfactory quietness of the Wool Goods Trade had its effect; manufacturers, as a class, withdrew from the market, and business was confined to small transactions to supply immediate wants. This dullness quickly resulted in a want of confidence on the part of some holders of fine Wools, which were in good supply, having been comparatively neglected through the season; a weakening tendency was evident, and some large parcels of Ohio XX Fleeces were offered at two to three cents below previous selling prices. The general feeling, however, among those interested was, that with the legitimate demand for these grades, would come an improvement in prices, and many dealers and consumers showed a disposition to take any lots offering below market rates, which action resulted in re-establishing confidence, and the month closes on a firm market, with values at previous quotations.

The demand from manufactures, however, is small, as they will not anticipate their wants materially, while their goods are accumulating on a dull market with fall Woolens, many of them are already changing their looms to spring fabrics, for which they will require finer wools, and are therefore anxious to use up their present stock. A few manufacturers have large supplies but generally they are not stocked beyond 60 days.

During the past fortnight receipts from the West have fallen off very materially, and it is generally conceded that nearly the entire clip has now been marketed. When it is considered that the amount of Wool in the Eastern market is by no means excessive for this season of the year, and that future supplies from the country are nearly, if not quite exhausted, it is clear that the present stocks must all be required for consumption before another clip

It is advocated that the large importations of fine foreign Wools will have a tendency to depress prices of the domestic staple from their present standpoint. Purchases made at quotations in the English markets, would cost imported, more than asking prices of to-day for similiar Wools, which precludes further operations, except on a higher basis of prices here. It is estimated that the amount of Cape Wool, (which class meets with most favor with our consumers), on hand in this country and to arrive from the Cape, is about 10,000 bales, equivalent to about 3,500,000 lbs. of Ohio fleeces. This increase to our supply of Domestic Wool hardly make up the deficiency created by the shortness of the past two clips, estimated at thirty to thirty-five million pounds of washed fleeces.

In view of these facts, we are of the opinion that Wools will not change materially during the next thirty days, but that later in the season we shall probably experience an active demand, with possible some improvement in prices.

PULLED WOOLS.—Lambs are coming in more freely, in small lots, and meet with ready sales at full quotations. The satisfactory prices obtained by farmers for their Wool this season has influenced them to keep their sheep instead of killing off a large number as has been the case for the past two years. The result will be quite a dearth of Pulled Wools during the remainder of the season.

CALIFORNIA WOOLS have been quiet throughout the month. The supply is not large, but the Wools are in much poorer condition than last year, and do not meet with the same favor among manufacturers.

Agriculture.

TIM BUNKER ON FEEDING WITH OIL MEAL.

"It's no use to try it," said Jotham Sparrowgrass, as he poked his cane into the tub where I was preparing a mess for my fattening cattle.

"No use to try what?" said I.

"Why to fat cattle with lied meal. You see the thing has been tried, time and agin, over on the Island, and failed. Never could make the cattle eat the stinking stuff. Job Woodhull and Zophar Mills both tried it one summer. You see they had heern a great deal about feeding animals with lie meal, and they took it into their heads to make a lot out of fish ile and Indian meal. They had a plenty of ile from their fish works and they put in about five gallons to a barrel of meal, and mix it up well. They tried to get oxen to eat it, but it was no go. They kept trying every thing with it for a week or more, and by that time it was about the stinkenest mess that was ever got up on the Island, where they are famous for smells, especially in the fish season. I guess they hare'nt heerd the last of that ile meal yet."

"The oxen were sensible brutes for not touching such stuff," said I. "But you see, Uncle Jotham, this is not that kind of oil meal."

"Do tell!"

"You know there are certain kinds of plants that produce oil-bearing seeds, and when they are pressed for the sake of the oil, a cake remains which is good for manure or for provender. They press rape seed and the castor oil bean, and the refuse cake makes a very good manure. They press flax-seed to get linseed oil for painting, and cotton seed to get oil for burning, for making soap, and other purposes. The cake that remains is ground up into meal, and is fed to cattle."

"Well, I never paid much attention to it, but I allers tho't oil meal was such as they made on the Island."

This talk with Uncle Jotham occured more than a year ago, when I first began to use the meal made from linseed and cotton seed cake. I had not much faith in it myself, when I began to use it, though I ought to have had; for linseed cake has been used for fattening, and various feeding purposes, for several generations. It is astonishing to see how little faith people have in any thing they have not seen and tried.

In England, if a farmer has got to purchase feeding stuff, he is certain to invest in oil-cake. In this country, it is pretty certain to be corn or oats. Almost all the oil-cake made in this country is sent to a foreign market, because very few of our farmers have tried it. Once in a while we find an imported farmer like John Johnston of Geneva, or the dairy farmers, using oil-cake for feeding. But not one farmer in a hundred has ever seen it or tried it. As a rule, they have no faith in buying any thing to keep up their cattle in high condition. They sell grain, and feed out hay and grass. These, no doubt, are the staple article of fodder, but all cattle will do better to have some addition to hay and grass. I have always fed every thing I could raise on my farm—oats, buckwheat, rye, and roots—and have no doubt it pays. If any body can use grain to a profit, the farmer can. The man who buys his grain expects to make a profit on it, and in most cases does so. Why should not the farmer feed his grain and make the profit himself? If there is a profit in feeding twenty-five bushels of corn to a bullock, of say, three dollars, the farmer, especially if he live near a good market, can make the profit a little better than any body else. He wants the manure for his land, and the manure is on the soil where it will be plowed in. There is no expense for carting it three or four miles, from the village, or of shipping it fifty miles, or more, from the city.

I always liked to feed grain, corn meal, oats, etc., but I think now the oil meal pays better than even the grains. The linseed meal comes pretty high, and that is one great object to its use. But the cotton seed meal comes even cheaper than corn meal, and I think does better than linseed, pound for pound.

I had not used it a month, before Jake Frink came along one morning and hailed me.

"What ye been doin to yer cattle lately, Mr. Bunker? I see the hair looks mighty sleek and shiny, as of it had been combed with a fine tooth comb, and had some liniment on to it."

"You are right, neighbor, but the ointment was applied on the inside. I have been feeding with oil meal."

"What upon airth is lie meal? Never heern of such stuff."

"Well, there is a fellow up here in Shadtown has started the business of pressing cotton seed oil, and sells the meal from the ground cake to the farmers."

Jake Frink was about right in describing the glossy coat of my yoke of oxen, though perhaps, I did not do full credit to John's curry-comb, and wisp of straw. They are Devons, and John takes a good deal of pride in polishing them down, especially when he drives a load of wood to market in Shadtown. Whether any body looks out of the window at the young farmer's team, or at his wood, I am not able to say. He is uncommon fond of going to see Sally at the parsonage, I have noticed lately, and the span of Black Hawks are quite as shiny as the oxen. Probably he don't want to disgrace his sister, when he is in town.

I have been trying this feed for a year or more, and think I get more for my money than in any kind of feed that I buy. It comes considerable cheaper than corn meal, and goes further in making milk, butter, cheese, beef, mutton, pork, etc. It is excellent for working cattle, making them shed their coats early in the spring, and keeping them in good flesh. It increases the product of milk from twenty to thirty per cent. depending, somewhat, upon the condition of the cow. I have found about two quarts a day enough for a single animal. If fed too liberally, it gives the milk an unpleasant flavor. It keeps the cattle in good thriving condition. In making beef, a larger quantity should be used; there is no bad taste imparted to the meat.

Almost all cattle are a little shy in eating it at first, and, in this respect they are pretty much like their owners in buying it. But if a small quantity is mixed with some palatable food, they will eat it, and soon become very fond of it. One great advantage in using this and the linseed cake meal is the excellent quality of the manure. It seems to do execution on the land like hog manure. I have never had such a yard of manure as I carted out this last spring, and I think it must be owing, in part, to the two tons of cotton seed meal used by my cattle last winter. It would have made a great difference in the looks of my farm, if I have begun to use this article ten years ago. But we must all live to learn.

Yours to command,

TIMOTHY BUNKER, Esq.

CORRESPONDENCE, AMERICAN INSTITUTE FARMERS' CLUB.

Good Hay Crop.—S. F. Brigham, Sharon, Walworth County, Wis., says: Mr. Manning R. Heard of this town has just taken from less than 4½ acres of land 20 tons of hay. The land lies near his house, and has been chiefly used for ten years as pasture. Three years ago it was plowed and sown to timothy and clover. Last year he cut 10 tons from it, and this year full 20 tons of hay of excellent quality is the product of this small field. This account will be doubted by many, but the truth of it can be substantiated by abundant testimony. Crops generally are of good quality and promise a large yield, wheat excepted; that, owing to the bug, will fall below the average.

Disease in Sheep.—H. H. Shaw, Surry, N. H., writes: The sheep in this part of the country are becoming valueless from disease called scab, but which the usual treatment fails to cure. The wool falls off and they become poor on good feed, breaking out in small sores and some die. If you, or any of your correspondents, can furnish a remedy for this disease you will greatly oblige most sheep-raising people of this vicinity, as well as an old subscriber. Last Winter I had a flock of 90 of the best for some distance, but the latter part of the Winter they suddenly began scratching and pulling their wool. I was advised to use a wash of tobacco and poke root which I have done administering sulphur at different times but with no success, more than they do not scratch as much, but the disease remains unabated, as the wool still continues to fall and they remain poor.

Cabbage Lice Remedy.—O. E. Best, Jordon, N.Y., writes: I saw in the *Tribune* of August 2d, an inquiry from Andrew Washburn, Illinois for a remedy for the cabbage louse. I lost all of my cabbages last year from these pests, after trying remedies innumerable, recommended by countless persons who knew *just how* to fix them. But this year I have "met the enemy and they are ours," with a very simple remedy, which I accidently heard of from an old nurseryman. It is this: Buckwheat flour sprinkled on the cabbage (and lice) when the dew is on, or when the cabbages are wet. I have made but *one* application—a very thorough one, though—and there is not a louse to be seen on a single plant. Two weeks ago I gave up my plants as ruined, and was intending to ask you for a remedy. And not only cabbage plants but it is equally efficacious with the currant-worm, rose-bug, &c.

POLITICIANS IN FARMERS' FAIRS

In an article written some years ago by Judge Potter, and recently republished in the *Mirror and Farmer*, it is claimed that the first fair ever held in this country was at Londonderry, N. H., one hundred and twenty-nine years ago; that in 1719 the first Irish potatoes ever raised in America grew in this town, and the first exhibition of them was made in 1722, and that the first premium in America for Merino sheep was awarded by the "Derry fair."

The writer closes by a reference to more modern fairs, and says:—

After 1807 and 1807 fairs began to be holden in other sections of the country, but the difficulties with England and the war of 1812, 1813, and 1814 checked their frequency and usefulness. After the war had closed, greater attention was paid to agriculture, and societies were informed in most of the counties in the State, and were continued for some years with decided benefits to all interest of the State. A "Board of Agriculture" was established, and the results of their labors were given to the public through the *Agricultural Repository*. But the usefulness of these societies was of short duration. Various causes operated to make them unpopular, the principal of which *was that they became identified with the party politics of the day, through the ill-advised scheming of politicans.*

A striking instance of the hasty, careless business habits of our people is afforded in the fact that during the month of June more than 337 000 letters misdirected or otherwise not delivered were received at the dead letter office in Washington. Of these 11,700 contained money, checks, receipts, drafts, or other documents of value.

"Where's your filial gratitude, you nasty boy? What would you have been without your kind father and mother?" "I s'pose as how I'd been an orphan, sir."

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. This description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 23 2-100 per cent. For life-sustaining properties to all stock exposed to sudden changes of weather or over-driving it has no equal.

For MILCH COWS it is particularly valuable, increasing the quantity of milk and greatly improving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food generally mixed with the mash of bran slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and sweetness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($40 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, sold at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

TRUE'S

IMPROVED

POTATO PLANTER.

This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed.

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse plant six acres of potatos in a day, is of inestimable value; because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor-Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

Horticulture.

PROFITS OF PEAR CULTURE.

Ten years ago I selected a single row of thirty Duchesse d'Angouleme trees, planted ten feet apart in the row. Since then I have kept an accurate account of the total sales of pears from these thirty trees. They are now eighteen years old, and they have produced seven crops in nine years. The trees are at present looking very well, and, if we judge from appearances, they will continue to be productive for many years. They were originally dwarfs, but I am quite confident they are now standards. This is true of the majority of the Duchesse d'Angouleme trees in the orchard.

The following statement gives the amount of each year's sales:

The 1st crop, the trees eight years old,		$120.00
" 2d " " "		139.00
" 3d " " "		156 00
" 4th " " "		202.28
" 5th " " "		267 00
" 6th " " "		310.00
" 7th " " "		705.00
Total,		$1,900.00

This row, two years ago, produced ninety-four bushels of marketable fruit, which sold for $705. There was a scarcity of peaches in market, and pears in consequence brought higher prices than usual.

I will state in this connection, that this row is the oldest in our orchard, no other of an equal number of trees has yielded so abundantly.

We have single trees that will yield more. In 1865, we sold from four trees, grafted only nine years, $100 worth of fruit. Since then we have gathered from one of these four trees, nineteen baskets of Bartletts, and sold them on the premises for $2.50 per peach basket, making $47.50 from a single tree.—*Quinn's Pear Culture for Profit.*

HOW TO KILL TREES BY WATERING.

Before we had learned what *not* to do in pomology and arboriculture, in order to make trees thrive luxuriantly, and bear abundantly in hot and dry weather, we destroyed several fine evergreens simply by puerile management.—This occurred during a severe drought, when we knew no more than other boys, how *not* to water trees. Every evening, several pailsful of tepid water were poured on the dry ground around each tree; and the parched earth drank up the scanty supply, without seeming to have been even sprinkled with water. During the day, the soil around those trees seemed drier and harder than when there was no water. The more they were watered the more the leaves and branches and the hard soil seemed to need a generous drenching. No effort was made to save any, excepting those valued most. But every one that was watered liberally, died before winter. The trees were well rooted in grass ground, having been planted two years. If some one had told the inexperienced youth to spread straw or shavings around about those trees, over an area of ten feet in diameter, before applying the water, every one could have been saved. If the ground were mellow and not mulched, the true way would have been to draw back a few inches in depth of the surface, water liberally, after which return the mellow soil. This is the true way to water any plant, if we would prevent the surface of the ground from becoming crusty Mulching is better. If bearing trees can be mulched during the hot and dry weather, the fruit will grow much larger for it.—S. E. Todd, in *New York Observer.*

The Peach trade of New York is now very brisk, 160,000 baskets came over the New Jersey Railroad in one day, occupying *nine trains and one hundred and ninety-six cars*, reaching one mile and a quarter.

FINE MIXED TULIPS FOR FALL.

CHEAPER THAN EVER

By Mail, 35 cts. per dozen; $1 25 per 100. By Express, 500, 85; 1,000, $8. Send stamp for Illustrated Catalogue of Bulbs and Winter Blooming Plants.

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration, so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent Library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA. By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

THE GARDEN VEGETABLES OF AMERICA. By Fearing Burr.....Price $2 50

COMMISSION

SALES-ROOM

—AND—

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders shall be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should include satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns several of which we have the exclusive sale for this Coast.

THE POTATOE PLANTER,

JEBB'S PATENT CHURN,

CHEESE CURD CUTTER

PATENT WEEDING HOE,

LIFTING HAY FORK,

WITH OTHER VALUABLE IMPLEMENTS.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

TREE SEEDS

OF ALL THE VALUABLE KINDS.

Also,

TOBACCO SEED.

COTTON SEED.

COFFEE SEED.

TEA SEED.

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental Seeds.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

FLOWERING BULBS.

RARE AND CHOICE KINDS

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

Please remember that Lawns can be made so as to be perfect at any season of the year.

FINEST MIXED LAWN GRASSES,

PACEY'S PERRENNIAL RYE GRASS,

ITALIAN RYE GRASS,

EUROPEAN RYE GRASS,

PERRENNIAL RED AND WHITE CLOVER,

ALFALFA OR CHILI CLOVER,

KENTUCKY BLUE GRASS.

NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

EVERGREEN AND DECIDUOUS SHRUBS,

ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

ORANGES, LEMONS, FIGS,

Peaches, Plums, Cherries, Apricots, Pears, Apples, Figs, Almonds, Walnuts, Nectarines, Grapes, Etc. Etc.

Also the best varieties of Strawberries, Raspberries Gooseberries, Currants, and Blackberries,

PERPETUAL FLOWERING ROSES

Of the best kind

GREENHOUSE AND BEDDING PLANTS,

These are grown at our residence under our own care where they always can be selected.

Any one desirous of having their Gardens look gay throughout the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same,

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference

WARREN & CO.

Farmers' Headquarters 320 Clay Street, up-stairs

The California Farmer.

SAN FRANCISCO.

THURSDAY EVENING, SEPT. 14, 1871.

THE CALIFORNIA FARMER READING ROOM AND MUSEUM OF NATURAL HISTORY.

220 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

OUR NEW YORK AGENCY.

Geo. P. Rowell, & Co., 40 Park Row, New York

AND

S. M. Pettengill & Co., New York

Are the Sole Agents for the CALIFORNIA FARMER in that city. They are authorized to contract for our Journal for the Advertising and make Collections for the same at the very lowest rates.

Our many Patrons in that city and State are requested to call on them, give their business to them and subscribe for our Journal which will always be found on file at their READING ROOMS

SPECIAL, TO ADVERTISERS ABROAD.

Advertisers of other States who wish their Advertisements to *appear promptly* must bear in mind that the MONEY must come with the advertisement to insure its insertion.

The cash, or its equivalent, a satisfactory reference must come with the advertisement.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue of our Journal*, to which we would direct their *special* attention.]

We call the special attention of our readers to the account of the coming great "PEACE JUBILEE," to be held in Boston, Mass., next summer. It is indeed worthy of a perusal, the idea is a grand one, the time a grand one, and the Jubilee will be, as the writer says, the Grandest and most truly Sublime affair the world ever saw.

Greeley on Marriage—should be read by all who believe in this "Golden Chain" for social life. Mr. Greeley has done himself honor by this Letter.

We call special attention to one European Letter as one of great interest.

Our New York Letter and much other matter is deferred by reason of severe illness.

BAUERS TYPE FOUNDRY, NEW YORK.

We have received a Specimen Book of the Types and Cuts of this well-known and popular Foundry.

This is one of the finest Specimen Book of Types and Cuts we have seen, many styles entirely new and original.

OLE BULL RECOVERING.

Nothing we have written for a long time has given us more real pleasure than to pen the words we now write,

OLE BULL RECOVERING,

for we feel as if the "Soul of the Violin" will awake again, and touches of melody again be felt in the human soul.

Only last week we wrote of his illness, and gladly write of his recovering by advices just received, and his many friends here will join in the song of gladness we now herald, for it may be we shall again welcome him to our "Golden Land."

THE POTATO PLANTER.

We call special attention of our Potato-raisers to the Patent Potato Planter which is advertised by us.

There is no raiser of Potatoes of any amount who cannot save more than half the entire crop of planting by using this new and valuable Planter.

They can be seen at the FARMER Office

CHEESE CURD CUTTERS.

Dairymen will find the Cheese Curd Cutters advertised by us as the very best kind, they are the YOUNG'S PATENT.

For sale at the FARMER Office.

CROPS, SEASONS, PROSPECTS, &C.

The late peculiar weather in many sections of our State, the intense hot and sultry weather has in some degree shrivil'ed some kinds of Fruits, while it has been very good weather for ripening up the Grape crop and giving the Grapes all the perfection of the saccharine juices so desirable for Table Grapes and also for heavy Wines.

The Barley and Oat crop will be quite large and excellent in quality.

The Hay and Grain crop being all harvested, hot weather has no effect on these, but on crops not matured, the Root crops, Melons, Squashes, Beans, Potatoes, &c., a cooler atmosphere now and then would be more acceptible.

The weather as we have said has been very dry and sultry, this if followed by a change to a cool and windy season would bring up early rains, and our Farmers we think are pretty well prepared, as their Hay and Grain is mostly all sheltered or sold.

Farmers are now thinking of the coming planting season, and in despite of all the losses and disappointments of the past year—many who planted 300 acres and lost, will plant 500 acres this year with the hope to make up the losses of the past.

The present price of Grain in Europe with the demand for Flour in China, that is so evident will increase every year, encourages our Grain-growers to hope for good prices for many years to come, and with this hope they will plant largely for another year.

The Fruit crop is large, but too much of it is of a small and poor kind by reason of overcropped trees. Our Pears and Grapes of best quality have been and will be shipped to a large extent this year. Potatoes, Onions, Beans and Corn will be a good crop generally, and much of these products will be sent out of our State.

The Wool clip this Fall is not as clean and good as was expected, and the value of it has declined in consequence.

Wool-growers should read Walter Browns & Son's Wool Circular—much practical good can their be obtained.

Whatever drawbacks may have occurred, our Farmers have enough to be thankful for.

THE PERMANENT GOOD OF FAIRS.

There can be no question but that *Good* results from our numerous Fairs which take place in various sections of our State, but as there is no admixed Good, so these Fairs have some *drawbacks*, and sometimes so great as to overbalance all the good that otherwise would have resulted from them.

We think the Public and our best Farmers, our Mechanics and our Manufacturers are beginning to see this, and calling loudly for a REFORM, a return that *shall give* to the producer of an exhibit of any article of *practical value*, whether it be from the Farm, Workshop or Manufactory, a Fair and equitable Premium, and to place these CONTRIBUTORS FIRST ON THE LIST OF VALUE, and the *First to be Paid*, for it has too long been the case that these products have not been justly regarded but made secondary to others, while Premiums have been given to articles of no utility whatever.

If the managers of Fairs in California will carefully pursue the doings at the best Fairs in the old States, they will see *we are behind the times in all the plans adopted here*, and that a change must be had before our Fairs accomplish the good which they might accomplish if wisely managed. We refer to an article on this subject under our Special Agricultural Head.

THE STATE FAIR NEXT WEEK.

The State Fair opens next week at Sacramento, and great preparations have been made by the Managers and the Friends of the Society to make it the BEST FAIR ever held in our State, no exertions have been omitted to prepare for a truly creditable Fair.

There will be the finest and largest show of Blood Horses, Cattle, and other Stock ever made in the State, the finest Horses are engaged for the Races, and the choicest Durhams, Devons, Alderneys and other Stock will make the display very attractive, and so great is the interest felt that there is no doubt the City will be filled to its utmost capacity, and those who secure a place to rest will be lucky.

SWINE BREEDER'S EXPOSITION

The First Annual Display of the *Illinois Swine Breeders' Association* will commence at Dexter Park, Chicago, Ill., next week, Sept. 19th, and continue *three days*. This Exhibition of "Porkers" will undoubtedly bring out the finest display of Blood Swine ever made in the United States, as many of the largest and best breeders, not only in Illinois, but elsewhere, are earnest in making a grand show of Swine.

The "Premium List" which has been sent us is one of the largest and most liberal ever offered, no premium less than $15, and that up to the GRAND SWEEPSTAKES OF ONE THOUSAND DOLLARS for First, $500 for Second, and $250 for Third Premiums, while the Premiums for Best single animals in many cases is $100 each, and Second Premiums are $50. Such liberality must draw out a very large display and great competition as well as a Grand Show.

Chicago does nothing by *halves*, and for a "Porker Show" this as the saying is "The going the Whole Hog."

AGRICULTURAL SCIENCE.

The Meeting at Chicago recently of the Presidents of our Agricultural Colleges, with other scientific Agriculturists, gives promise of good results, some of the best men in the land assembled and many important questions were laid before the meeting and ably discussed—we hope soon to report them.

THE SAN JOAQUIN VALLEY FAIR.

A large gathering of people came to Stockton to see what San Joaquin could do for an Agricultural show in 1871, for everybody had heard that the San Joaquin valley had *dried up*. The Fair, however, this year, shows very conclusively that if *some farms* have short crops, there are, as the "razor strop man" says, a few more left, that can show as fine grain and good crops, and as fine fruit and wine as any other county in the State.

The exhibition at the Hall, although very showy, was not altogether an agricultural show, but too great a display of fancy goods and wares, foreign to the purposes of a real Agricultural Fair, but placed there to advance the *individual interests* of those who have "Goods to sell."

Three-fourths or seven-eighths of the space was occupied by articles not belonging to an agricultural fair, yet all helped to fill the hall and gave interest to some visitors. We hope, in coming years, *producers* will take more interest in our Fairs.

The attendance was large, and such a bevy of children we never before saw at a fair in one day. They were, indeed, the rosy-cheeked fruits and bright flower buds of the fruit from the "Garden of Eden." God bless little children, but these little ones felt the effect of the heat, for the thermometer told *plump hundred*, and sparkling drops stood on their little faces, even in the shade. This week has been the hottest of the season, and although oppressive in the shady hall, one could guess what it would be on the race track in the burning sun; and if men and children sweat big drops while standing still, what must the poor horses suffer when, with whip and spur, the rider tries to make them tell 2:40. The track ground was well patronized. Races always draw. The stock exhibit, though not large, was fair.

STOCK

The exhibit of Col. Younger, of San Jose, of twenty head of Durhams, attracted much attention and elicited great commendation.

The show of cattle by Overbeck, Smith and Patterson was most creditable—all very superior animals—one thing is certain, by such exhibits the too common stock is left at home This is right, as none but the best should be shown.

Col. Saxe came with his herd of Kentucky Durhams and his band of Cotswold sheep, and these attracted much attention, as the colonel is ready to *talk stock* to all, and will attract visitors who like to hear the points of animals explained.

POULTRY EXHIBIT.

The following exhibitors of Poultry, each having very handsome birds of various kinds: Light and Dark Brahmas, Buff Cochins, Bantams and Houdans were exhibited.

C M Nichols, of Front Vale, Alameda Co., W. W. Hatch, John Sutherland, A. S. Stiver, James C. Sage, M. S. Terry, James Littlehale, and W. Moore. The show was good.

THE PAVILLION.

FRUITS.

C. Dalton exhibited 24 varieties of Grapes, some very fine specimens.

Nicholas Endich, a pyramid of grapes, all very fine samples, some 15 kinds; also Figs and Chestnuts.

West Brothers exhibit some 30 or 40 dishes Fruits, fine—pears, apples, grapes, quinces; also figs, almonds and chesnuts.

Melons, (mountain sweet), by Jacob Long; large fine melons, also, by Joseph Putnam.

A fine basket of Fruit by Mrs. W. L. Overheiser, and a few dishes of fine fruit by Q. K. Meyer, H. S. Sargent, I. P Hitchcock, (peaches extra) Joseph Putnam, (fine Tokay grapes) Martin Roche, 10 varieties grapes, Mrs. Martin, grapes and raisins, and other samples as named.

Mrs. Joseph Hale exhibits, as usual, a splendid array of pressed fruits, jellies and pickles, 82 jars and vases; a truly superb collection and very creditable.

FLOWERS.

O. G. Ernst, a very fine stand of pot plants and cut Flowers, among which were *Celosia Cristata* (Coxcomb), finely grown. His collection was highly creditable as an amateur.

A miniature garden, very neatly designed, by Wm. B. West.

VEGETABLES.

I. Hale makes a complete display, comprising Irish and sweet potatoes, onions cabbages, turnips, beets, carrots, sugar beet, fine squashes, mangel wurtzel, 50 lbs. each, and a gourd, Hercules club, over 3 feet long; also, a collection of apples and pears, large and fine.

V. Salgiani exhibits cabbages, cauliflowers, celery, carrots, beets, etc.

Joseph Putnam exhibits a bale of Hops of superior quality.

Squashes by Mrs. Beaumont; squashes by S. Terry.

Sample stool Wheat was raised on Twitchell Island at 70 bushels per acre.

Dried apples, pears, peaches and plums, (marked 16). Very fine, indeed.

GRAINS.

H. O. Matthews & Co. and L. W. Shippee exhibit collections of wheat, barley rye, and oats. Very fine samples, raised by various farmers on the San Joaquin, on irrigated and non-irrigated land. All the samples were very fine, and proof that grain can be raised in a dry season.

Surprise Oats, exhibited from Oakland, same as exhibited from other Fairs, very superior. Also, sample grown on the San Joaquin, and one sheaf of same, very splendid, grown by E. W. Shippee, on the Calaveras.

Samples of superior Wheat (six in number), of very superior quality, marked as high as 60 and 80 bushels per acre, by Q. D. Peters, grown in different localities.

AGRICULTURAL IMPLEMENTS.

L. B. Webster makes a good display of Agricultural Implements—mowers, grain threshers, corn mills, plows, churns, gang plows, etc.

Jones & Hewlett make a good display of Steam Engine and locomotive for threshing, wine and cider presses, reapers and mowers, plows, churns, etc. Excellent implements.

L. H. Gutter & Co., a fine show of superior plows, hay forks, etc.

Erdal & Grabow exhibit superior stoves and cooking ranges.

The Stockton Portable Gas Company display their invention.

The Globe Iron Works showed their own manufactured Pumps.

Matteson & Williamson exhibit their excellent implements, viz.:

Their new plow, called the "Farmer's Pride," with double iron standards, which being riveted to the side-plates, give extra strength and support. The plow has also an adjustable beam to fit to 2 or 3 horses. A very superior plow.

They also exhibit their Seven-tooth Self-sharpening Cultivator, the only one of the kind in the State. The teeth only require turning to be always ready for work.

A Sulky Gang Plow, called the "American Chief," with new improvements, one of the best implements invented.

Also, their Horse Hay and Grain Fork, one of the best inventions of the day. Four years ago, when this implement was taken to a grain field to compete, the workmen would leave, as they thought it would do away with their labor in pitching grain. Now, if asked to *pitch grain* in the old way, they leave the grain, such is the change.

Bowen & Abbot exhibit one plow.

MISCELLANEOUS.

The Stockton Woolen Mills make a fine display of Blankets.

The Harness exhibit of H. T. Dorrance is of superior quality.

The Pacific Tannery make a very fine show of Leather, equal to any made in our State.

Henderson & Clark exhibit a splendid lot of Carriages and Waggons, made to order; the only exhibitor. All work warranted. Nothing better has ever been shown.

A fine fleece of handsome wool, weighing 36 lbs.; superior—by C. C. Baker. Wool very fine merino.

BREAD, CHEESE, LARD.

A. Gall's Bakery show a collection of crackers, soda biscuits, etc., domestic bread by Mary Alice Watkins, 16 years old; six fine cheeses by I. Alexandria.

Flour and Corn Meal, by R. B. Lane, of Lane's Mills, of superior quality.

EXHIBITION OF COTTON.

The exhibit of cotton by Buckley, & Bros., on the Merced, is one of the most notable and worthy exhibits of the day. Here is something that will tell in the future in the real wealth of the State, and in its manufacturing industry.

INCIDENTAL NOTICES.

Thompson's Patent Road Steamer was moving in the streets, under the management and direction of the engineer, and thence it travelled to the Park grounds, and at a trial trip of speed it went over the mile course in 3:20—pretty good time for a heavy team.

The city is full of people. All kinds of shows, the Japanese jugglers, the Anacondas, Albanians, and a hundred shows, all to catch the dimes and empty the pockets and draw people away from the legitimate object of Exhibition.

We return thanks to Pres. Doak and Secretary Compton and other officers of the Society for many courtesies.

THE INVALID HOTEL.

We have received a Pamphlet calling attention to this subject and asking aid and co-operation for an Institution of this kind in California, an Institution very much needed, and one that would be of great public service, as it would answer as the "Home" of the Invalid stranger who seeks our shores to recuperate, or may be taken sick here.

Mons. Bondue called on us and presented his Pamphlet, and explained his object and plans, which is a most excellent one. Mons. Bondue has had great experience abroad in this work. He proposes the erection of *Two Hotels*, one First Class, for those who are fully able to pay liberally, and one for those in humble condition. These are *not* to be mere *Hospitals* but Hotels, where convenience, comfort, and a Home is provided for *Invalids*, that Life may be cared for and Health restored, a noble plan. We are glad to learn our wealthy men are favorable to the enterprise, and we trust Mons. Bondue will be completely successful in his good enterprise.

GREAT STOCK SALES.

There is now being made quite a number of sales of Blood Stock of all kinds in our midst, valuable Horses, Cattle, Swine, Sheep and Domestic Poultry, and all purchasers aim to buy up the best.

We have also advices from Kentucky and other great Western States of immense sales of Blood Stock, mostly Durham Cattle, at high prices at auction, many sales amounting to 8, 10, and $15,000 in a single day, while large numbers are being brought from Europe of very high cost, rating from $500 to $5,000 each. This speaks well, and the sooner all inferior and scrub stock is killed off the better.

RISE IN GRAIN.

Grain-growers should carefully scan the European reports, the shipments abroad to England, to China, and elsewhere, and they can learn the causes of the recent rise—read Grain report in *Price* column.

THE ELECTIONS ARE OVER.

The public mind has been fully absorbed by the Elections, and both parties were earnestly at work, each striving to carry their party.

In the great warfare of Politics, while "Those who were in, wished to keep in, and those who were out, wished to get in" it is to be hoped the great victorious leaders will think now of the paramount importance of *building up our State*, rather than *building up a Party*.

California at the present time has great interests at stake which are involved in the character of our Rulers, for to them we look as to the *Power* that will determine how fast our State shall progress in all that will make California great.

Party politics, or partisan influence will not build up California. PATRIOTISM is what is now greatly needed, and while our State is being rapidly opened up by Railroad communications from one end of the State to the other, and Steamship Lines are bringing the commerce of the "Ends of the Earth" to our very door, if our Public men are only seeking the "Spoils of Office, and self-aggrandisement rather than laboring to build up the State and promote its highest welfare, then California will *retrograde* rather than advance.

Upon the Yeomanry of our State rested the responsibility of *selecting suitable men* as Representatives for our State Legislature, for there will be found the *wheels* that roll on to prosperity, or roll back to selfishness.

Upon the results of this Election and by the action of those *who shall guide the State the next few years* will greatly depend the REAL DESTINY of CALIFORNIA for many coming years.

Wise Legislators make a prosperous State, and the Farmers and Workingmen of California hold the *balance of power*, and upon the character of the Legislators elected the coming Session of our State Legislature, and their labors for California will decide the future.

GENERAL NEWS ITEMS.

THE PAVILLION.

The Pavillion, where so late was a scene of grandeur, beauty, and joy, now presents a changed scene. The throng of Beauty and Fashion is there no more, the works of skill, genus, and talent are removed, and now the work of demolition has begun and soon a vacant square in our city midst will be all that will tell of the place that was once hilarious with music and the business of life.

THE VOTE.

The elections are over and a very universal calm reigns in all the Political circles of our City and State.

THE CATTLE DISEASE.

The cattle disease so prevalent in various parts of our State, and which has also again appeared in Europe, especially in England, has caused measures to be taken to prevent the shipment of any more cattle from England to the United State, the disease now prevailing there is the *foot* and mouth disease, and the American Consul will not grant certificates any longer to ship Stock from Liverpool.

JAPANESE STUDENTS.

The continued interest that is felt in our country and her Institutions by the Japanese Government has induced the sending hither more of the young men of Japan to enter our colleges and thus learn of us in all that appertains to Progress and a Free Government.

Quite a number of young students have just arrived by the last steamer, they will remain on the Pacific Coast a little time and then go East.

SALES OF FURNITURE.

Somebody will keep house and live well too and have Rich Furniture too, even if croakers cry "Hard Times."

Stepping into the Furniture Warehouse of Messrs. Geo. O. Whitney & Co., this week, we found numbers of men matting and boxing large lots of Furniture for various parts of the State, while their wagons were taking away Rich Parlor and Chamber Setts for our citizens.

It is an assured fact that however many persons break up and go away, there is still many *new comers* and new married persons that are continually buying furniture and setting up housekeeping and the amount we noted as sold by this firm *in one day* was upwards of FIVE THOUSAND DOLLARS, this we call a good day's work for dull times, but Messrs. Whitney & Co., has such a splendid stock they must make large sales.

OUR DOUBLE GERMAN HOLLYHOCKS.

Our double Hollyhocks, are playing the queerest pranks imaginable this season. One of us passing one day near the terrace where they grow, saw a beautiful, very double, pink blossom perched upon a stalk with very homely semi-double gray ones and supposed of course some one had planted it there in this way. Nothing is finer for a lawn in July and August than a group of these superb, double English or German hollyhocks, and they can be had with very little trouble. All the care ours get is one hoeing in a year, though doubtless they would well repay winter manuring and would laugh all the more merrily for a little more tickling of the earth about them.

The single ones spring up and grow wherever they get a foothold, even among the stone-heaps by the roadsides, without any cultivation. The lawn about "Hollyhock House" is just now very social and gay with these self-sown single ones as they stand all about in their many colored dresses, white, yellow and in all shades of red from pale flesh to deepest crimson.

[The above we find in the *Lows of Life*, and we can also vouch for this sporting of this really showy Flower, as we have had the same occur with us.—ED. F.]

At Cambridge, Massachusetts, last week the lightning struck the house of a lightning rod maker, just to show its impartiality.

A NEW BOOK.

Wood & Holbrook, Publishers of The Herald of Health, New York City, have in press a little book entitled "Parturition without Pain; or, a Code of Directions for avoiding most of the Pains and Perils of Childbirth." It contains the following Chapters: Healthfulness of Child-bearing; Dangers of Preventions; Should Diseased People Marry; Opinions of Medical Men as to Escaping Pain; Cases; Preparation for Motherhood; Exercise and Occupation during Gestation; the Bath—especially the Sitz Bath; What Food to Eat, and What to Avoid; the Mind during Pregnancy; Mothers' Marks; the Ailments of Pregnancy and their Treatment; Use of Anæsthetics; Female Physicans, etc., and an Appendix in which are discussed many topics of great interest to prospective mothers.

The work is the result of great labor and care and will help women to avoid most of the pains and dangers attending Child-bearing. Pp 120. Price $1.00. Wood & Holbrook, Publishers, 15 Laight Street, New York.

This is one of the most valuable Books ever published, ever wife and mother should have a copy.

SHEPHERD WANTS A PLACE.

An active young man, recently from New Zealand, and experienced in Sheep raising, Stock raising, and Farming generally, wants a good place permanently.

The advertiser is a good sheep-shearer, and fully understands all about sheep, and is a reliable man.

A CARD.

TO EASTERN ADVERTISERS.

We feel it our special duty to notify our Advertisers in all the Eastern States, that if they desire to reap the *Full Benefit* of their advertising that

NOW IS THE TIME TO BEGIN.

It is all important to Californians who desire to *Import from the Eastern States* their

Trees, Seeds, Implements or Merchandise,

that they should know where to find them *month* before they are to be used, so they can by a Correspondence with the parties know *who* can *satisfy them them to the best advantage.*

Those Dealers in any articles they desire to Introduce into the Pacific Coast, should by all means begin early. Soon our season of PUBLIC FAIRS commence, and this is a time when our Journal is scattered widely, and thousands sent out in the Cause of the Fairs and to promote our Industry, and all these will advantage ADVERTISERS.

The advertiser that begins early is the one that takes the lead in the business, and now is the most auspicious as for CALIFORNIA will Import everything that is

NEW AND DESIRABLE

cost what it will, and those Business men who are up and doing, *Manufacturers* of Implements for Farmers Sellers of Live Stock, Seeds, Plants, Trees, Garden Tools, Agricultural Books, &c., &c., should now be ready to send out their messages and let our people know what they have to sell.

The CALIFORNIA FARMER now enters upon its

THIRTY-SIXTH VOLUME,

and can give to all a BETTER CHANCE for PURCHASERS than any other medium, as we go *directly to those* who would purchase.

New Yorkers can send their advertisements to our Advertising Agents, G. P. Rowell & Co., others directly to us. See Terms in our Columns.

Address WARREN & CO.,
320 Clay st., San Francisco.

Home Miscellany.

THE BOURNE.

Under the growing grass,
Underneath the living flowers,
Deeper than the sound of showers;
There we shall not count the hours
By the shadows as they pass.

Youth and health will be but vain;
Beauty reckoned of no worth;
There a little girth
Can hold round what once the earth
Seemed too narrow to contain.

SUMMER EVE.

Fair Summer Eve! sweet as the purling stream,
To parched lips, amid Arabian sand;
Calm as the silent echoes of a dream,
That wafts the exile to his native land.

Kind Summer Eve! life's hard realities
Are melted by thy spirit-soothing breath,
The stricken heart forgets its miseries,
The dying, dreams not hopelessly of death.

Cool Summer Eve! thy gentle murmurings
Tell me of happy moments, ever fled,
Nor heed the stubborn course of Saturn's wings,
But dare the footsteps of the past to tread.

Sweet Summer Eve! I've sat and watched thee die,
And one by one the timid starlets shine,
Celestial rivals of her glistening eye,
Whose loving hand was fondly clasped in mine.

Dear Summer Eve! we sat and watched thee die,
From twilight shadows into gloom of night,
Nor recked how fast the happy hours could fly,
When love had lent his pinions to their flight.

Still Summer Eve! thou hast full many a tale,
Fain would I, linging, harken yet to thee,
Charmer of grief though other loves may fail,
A welcome thou wilt ever meet from me.

IMPROMPTU.

"I ONCE HAD FRIENDS, A THOUSAND FRIENDS."

"A thousand friends!" a thousand friends! ah, that
can never be,
Though thousands sun thy path with smiles, their
warmth is not with thee,
They glance upon the heart, and leave no kindly
feelings there,
To scatter rose-leaves o'er the soul, when tempest-shook
by care.

A "chosen few," but few indeed; for they must love
alone,
Who fling beyond the kindred chain a link to more
than one;
When life is bright, we give them then its little all of
mirth,
And trust them thus far, fearlessly, and win them to
our hearth.

But who would fling the love of soul, the foliage of the
heart,
Around a "chosen few," who place their hopes and
love apart!
Ah, rather let it cluster yet, luxuriant and alone,
Or rear it like the prophet's vine, to shade the chosen
one.

And when it withers, when it fades in sadness and in
gloom,
And the shrunk heart's blighted leaf, within a world of
bloom,
Then on my withering feelings lie, one dew-drop pure
and clear,
And *only* one, a glittering one. Beloved, give a tear.

TAKING COLD.

The least thing in the world gives me a cold," is the complaint of many, especially of those who "house" themselves too much—who are on their feet but very little. Such persons should make it a point to walk out two hours every forenoon, and an hour in the afternoon, taking care to cool off slowly afterwards; and if, in addition, such persons were to dip the end of a towel in cold water press out the water so as to prevent dripping, lay it on the head, and rub the whole surface of the body, as far as can be reached, in every direction, on rising and retiring, the pestersome habit of taking cold from every wind that blows would be broken up in a month in very many cases. The more a person bundles up, the more the slightest puff of air is avoided, the more easily will colds be taken, and before one knows it, the habit is so inveterate that the avoidance against taking cold becomes the main study of life. Such should fear the fate of Farquhar McKenzie, who more than thirty years ago took to his bed, and as a cold affected him in the most painful manner, he guarded against it more and more until he found himself in a condition that his hands had to be kept gloved all the time; the curtains were always drawn around the bed, and the only access to him was by means of a pane of glass, inserted for that purpose. And yet he lived thus thirty years, dying a month ago, showing to what the human system can become habituated.

A little boy having broken his rocking-horse the day it was bought, his mother began to rebuke him, and to threaten to box his ears. He silenced her by inquiring, "What is the use of a good hoss till it's broke?"

THE WORLD'S PEACE JUBILEE.

Mr. P. S. Gilmore has issued his prospectus in reference to the International Festival, to commence June 17th, 1872, the anniversary of the signing of the Treaty of Washington, and to end on the 4th of July. It is a most curious document, perhaps better reflecting the character of the originator than any of his other musical or unmusical doings. The Hall to be erected for this festival is to contain one hundred thousand people, the chorus will be 20,000, and the orchestra 2,000 strong. If this enterprise will not benefit musical art, it will surely benefit something and somebody else. Here is the prospectus.

Two years ago the Boston Peace Jubilee held the nation spell-bound by the sublimity of its music. That great volume of song swept through the land like a flood of melody, filling every Christian heart with "glad tidings of great joy." It came like a sunburst upon the musical world, shedding light where all had been darkness before, and revealing a new sphere of harmony, a fairer land of promise, and triumphantly realizing greater achievements in the divine art than were hitherto thought possible. It will ever be a memorable epoch in the history of music. Never before was music enthusiasm run so high in our own land; never had there been such an occasion to call it forth. It was a grand outburst of sacred song, an overwhelming outpouring of the people, a universal expression of joy and thankfulness that peace, had settled down upon the land once more. It was a glorious event, and thousands upon thousands are happier to-day for that one week of heavenly music. The boom of the cannon, the stroke of the bells, the clang of the anvils, the peal of the organ, the harmony of the thousand instruments, the melody of the ten thousand voices, the inspired works of the great masters, the song of the "Star Spangled Banner," the cheers of the multitude, the splendor of the spectacle, the general excitement and interest of the event, all this is the rich possession of many a memory, and will ever be recalled as among the happiest experiences of a lifetime. It was indeed a glorious triumph for all interested—a triumph for the individual participant, a triumph for the nation, a triumph for the musical world. Is there one of the thousands who were there who would not wish to see, to hear, to take part in another such feast of music—nay, in a festival of double the magnitude, double the magnificence, double the interest and importance in every respect?

A GREAT FESTIVAL PROMISED.

Within the past year the black cloud of war has burst over Europe, deluging with blood one of the fairest countries of the continent; but, God be praised, Peace has conquered at last, and once more unfolds her white banner over the Christian world. The moral consciousness of mankind is so shocked with the terrible havoc of war, as now waged with all the improved machinery of death, that the tendency of the time is for peace—permanent, enduring peace—among the nations of the earth. Will not all say God-speed to any movement that would help inaugurate such a happy era? With this end in view it is proposed to hold in the city of Boston, in the month of June, 1872, a world's peace jubilee, an international musical festival, a union of all nations in harmony, when twenty thousand voices shall swell the grand chorus and sing, as never before, the hymn of the angels—"Peace on Earth, Good Will Toward Men." For this purpose it is proposed to erect a Coliseum that will seat

A HUNDRED THOUSAND PEOPLE,

a grand temple of music that shall be, as it were, the gathering place of all nations, upon whose sacred altar every people shall lay its gift of song. Within, it shall be adorned with the emblems of peace and harmony, and over the different entrances the names of all nations emblazoned, while above it shall float the flags of all countries—highest above all the broad banner of universal peace. Poets, composers, artists, and conductors, of every land will be asked to contribute or take part, and all governments will be invited to send representatives to participate in the ceremonies. The festival will continue for two weeks, and it is proposed to dedicate one day to each nation. Now that through the recent Treaty of Washington there is every prospect of permanent, and, it is to be hoped, perpetual peace between England and America, it would seem highly appropriate America should dedicate the first day of the grand festival to the United Kingdom of Great Britain and Ireland. While the selections to be performed upon that day will consist chiefly of compositions of sons or adopted sons of the British Isles—including Coote, Bennet, and Arthur Sullivan, among living composers, and Balfe, Wallace, and others, among the illustrious dead—as the highest compliment America could pay Great Britain, the best place upon the programme will be given to England's national air, "God Save the Queen." This majestic choral, when produced by the chorus of 20,000 American voices, with the accompaniment of 2,000 instruments, and every other accessory that can heighten its effect, cannot fail to touch the heart of Old England, and convince her that her offspring across the sea "seek peace and pursue it," and are ready, in commemoration of the settlement of all questions of dispute between the two governments, to strike the grandest chord of harmony that ever fell upon human ear.

While the proposition to dedicate the first day of the World's Musical Festival to the Motherland will no doubt receive the approval of all Americans, who are themselves chiefly the children and children's children of England, Ireland, and Scotland, next and nearest to claim kindred with America is

THE GERMAN FATHERLAND.

To Germany, then—the lands that lead all others in the sublime art of music—the land of the immortal Beethoven, Mozart, Handel, Hayden, Mendelssohn, and scores of other composers, whose lofty inspirations to-day fill the universe with the "concord of sweet sounds," civilizing, Christianizing, and harmonizing the whole human brotherhood—to Germany, then, hundreds of thousands of whose noble sons are among the best citizens of America, shall be dedicated the second day.

But though there are substantial reasons why the Motherland and Fatherland, so intimately connected by ties of blood with America, should be the first to receive her greetings, she opens her heart and stretches forth her arms with equal warmth to Russia, to France, to Austria, to Italy, to Spain, to all nations, and invites them to join with her in making the proposed International Musical Jubilee such a festival of harmony and rejoicing as the world has never known.

Thus while united England, Ireland, and Scotland would have its day, Germany its day, France its day, Russia its day, Austria its day, Italy its day—each and every nation a separate day—while cannon will salute, joy-bells ring, drums beat, organs peal, two thousand instruments play, and twenty thousand voices sing—while all these elements of harmony will unite in producing the national airs of every land and the grandest works of the great masters with a power and majesty hitherto unknown, still, in order to carry out the proposed festival in all its fullness, it is necessary that each nation should be represented by a magnificent band, in the full uniform of the country to which it belongs, which band should be the gift and contribution of each government to this, the first Peace Jubilee of all nations ever held. Upon the day dedicated to any particular nation, the band of that nation would, at the most interesting moment in the day's exercises, be marched to the front of the platform to play its part and to receive such a welcome, such an ovation, as would convince its country that America at least desires to be on good terms of amity with all the world.

After the band has played a selection of its own choosing, and while it stands at the front the 20,000 voices, the 2,000 instruments, and all the elements of harmony combined, will give the national air of the country it represents, as a compliment from America to that nation.

What cheers would greet the appearance of a magnificent Austrian band, a Prussian band, a Russian, a French, or English band, or the splendid Guide's band of musical Belgium! What music they would make! What international harmony such visitors would produce.

The effect of such a musical gathering as is proposed would be to popularize the heavenly art of song, and move to nobler impulses every Christian heart. There would be no war, nor thought of war during the preparation for such a festival. It would bring nearer and bind closer with its sublime chain of harmony the hearts of all peoples, and cause the electric cable in its all-embracing and all-conquering march of civilization round the globe, to pulsate with warmer words of greeting than have ever yet leaped from heart to heart or from nation to nation through the mysterious depths of ocean, and open a broader path for the moral and material progress of the world.

THE MUSICAL PEOPLE OF AMERICA,

from one end of the land to the other, are now ready for this grand demonstration. In hundreds of cities, towns, villages, from the Atlantic to the Pacific, they are waiting for the word to organize their best voices, where they are not already organized, and to commence with renewed ardor the study and practice of the glorious music to be performed—music that will in the best manner represent the character and compositions of every clime and people; the music of Germany, which may be regarded as

UNIVERSAL MUSIC;

the music of England, Ireland, and Scotland; the music of Italy, the music of France, the music of Russia, the music of Austria, the music of Spain, the music of every quarter of the globe—Europe, Asia, Africa, and America.

From both hemispheres and every nation let them come—from classic Greece and the Holy Land, from Turkey, China, and Japan, from the Nile and the Ganges, the Alps and the Andes—aye, let not the continents alone, but the isles of the sea contribute, and with all their varied instruments to music swell the glad chorus of universal rejoicing, that shall fill not only every heart, but the whole world with divine harmony.

Come, ye representatives of every court and cabinet of Europe, the New World invites you to join in the feast she is preparing; come in your ships, not with implements of war to make war, but with instruments of harmony to inaugurate the new era of perpetual peace among the nations; come in the name of the "King of Kings and Lord of Lords," and let the voice of all nations go up in multitudinous chorus for "Peace on Earth."

The note of preparation sounded months ago is already awaking unusual interest at home and abroad. Leading men of the nation have given it their hearty endorsement, and day by day cheering words of encouragement comes in from all quarters. Members of the municipal, state, and national governments, as also those who by voice and pen and purse helped forward the Jubilee of 1869, are again ready to co-operate with the friends of harmony, in this and all countries, in making the Jubilee of 1872 such an exposition of the divine art as will raise the standard of music everywhere and be a living honor to all who may in any way contribute to its fulfilment.

All societies that took part in the Peace Jubilee of 1869, as well as those unable to gain admission to the chorus at that time, are now invited. Twenty thousand books containing the selections to be performed will be furnished free to the singers, and each and all are expected to enter into the good work with heart and soul, and devote the coming winter to thorough study and practice of the sublime music. Thousands of hearths and homes will be made happier anticipating this great event; the whole American people, aye,

THE WHOLE MUSICAL WORLD,

will look forward to it with deep interest; and when, upon the opening day, the grand chorus of twenty thousand shall rise to sing the inaugural "Hymn of Peace," and to this chorus the harmony of two thousand performers and the bands of all nations shall be added, such a volume of song will be heard, such a perfect and powerful accord of voices and instruments as never before went up from earth to heaven.

As all nations are invited to join with America in this demonstration in the name of universal peace, it is to be hoped our Ministers at foreign Courts, and all who represent us abroad, will use their influence in bringing about a festival which promises so much for the cultivation and development of international harmony

CLEANSING BLANKETS.

Put two large tablespoonfuls of borax and a pint of soap into a tub of cold water. When dissolved put in a pair of blankets, and let them remain over nigh. Next day rub and drain them out, and rinse thoroughly in two waters, and hang them out to dry. Do not wring them.

During a fine starlight evening lately a three-year-old philosopher, after a silent and apparently profound scrutiny of the heavens, asked his mother, abruptly, where the stars came from. Mamma replied: "I don't know, Willie; I don't know where the stars come from." "Well, you bet I do. *The moon laid 'em.*"

THE

HOWE SEWING MACHINE CO'S

Sewing Machines

Have become celebrated the world over. The work done by these Machines is unsurpassed, sewing the thinnest muslin and the heaviest goods with equal facility, and requiring no extra adjusting for uneven thickness or passing over seams

THE ATTACHMENTS

For Hemming, Felling, Braiding, Cording, Quilting, Tucking, Binding, and Gathering,

Are of the Latest Improved Patterns, and are superior to those used on any other machine.

THE HOWE MACHINES

Are the Strongest and Simplest, and seldom or never give any trouble in operating.

The Howe Sewing Machines

Are the oldest established in the world (Mr. Howe being the original inventor) and are in advance of all others in improvements and protection of mechanism. They have invariably won the highest honors at the great exhibitions of the world, and are universally acknowledged to be the best in use.

GRAY'S MUSIC STORE,

Musical Merchandise of every Description.

THE RECENTLY INTRODUCED

BURDETT ORGAN,

The manufacturers of the BURDETT ORGANS have succeeded in producing an instrument which may in a manner be compared to an orchestra, containing a variety of tones richly voiced. The stops in this make not only add to the power of the organ, but give a perfect imitation of different instruments, so that a simple melody may be repeated a number of times and the interest of the listener will be increased. It is with pleasure we acknowledge the flattering testimonials we have received from leading organists in California among whom may be named

MR. GEO. T. EVANS, Organist of the Church of the Advent, Howard Street, S. F.
MR. SAMUEL D. MAYER, Organist of St. John's Church, Oakland
MR. H. M. BOSWORTH, Organist of Calvary Church, S. F.
MR. J. W. C. RHIND, Organist of Howard St. M. E. Church, S. F.
MR. R. J. McCABE, Organist of St. Francis Church, S. F.
MR. J. H. DOHRMANN, Organist of St. Patrick's Church, S. F.
MR. CHAS. H. HOFFMAN, Organist of the Mason Street Synagogue
MR. J. MULLER, Organist of St. Ignatius' Church, S. F.
MR. GEO. SCHUCKE, Organist of the Methodist Church, San Jose.
MR. EVERETT POMEROY, Organist of the Presbyterian Church, San Jose.
MR. F. WM. GABRIEL, Organist of Trinity Church, San Jose.
MR. J. W. YARNDLEY, Professor of Music, St. Augustine's College, Benicia.
MR. LOUIS HECKMANN, Organist of the Unitarian Church, Geary Street, S. F.
MR. JAS. R. LAWRIE, Professor of Music, Santa Clara.
MR. DAVID H. BRALIN, Teacher of Music, Stockton
MR. WM. CARMICHAEL, Organist St. Mary's Church, Stockton.

Our prices range from $126.00 to $600.00 in U. S. currency, our arrangements being such that we supply our wholesale and retail customers in San Francisco without advance for freight from the factory in Chicago. The makers are convinced that they will be better paid in the end by selling a first class organ at a fair price, than an uncertain one at an astonishingly low price. We will sell Organs, melodeons and pianos on time payments to responsible buyers

MILLS' SEMINARY.

REV. C. T. MILLS AND WIFE, FOR THE PAST six years Principles of the Young Ladies' Seminary at BENICIA, are happy to announce to their patrons and friends that the next term of their well-known Institution will open

Wednesday, Aug. 2d,

In their NEW, COMMODIOUS AND BEAUTIFUL BUILDING just completed at

SEMINARY PARK, BROOKLYN.

As most of the able and experienced corps of teachers, with valuable accessions, as well as the fine classes of pupils now pursuing their studies, remove with them, the school remains essentially unchanged.

With greatly increased facilities for physical comfort and intellectual culture, and without additional expense, Mr. and Mrs. Mills believe they can accomplish much more for their pupils in the future, than they have been able to do in the past, and that their Institution offers unrivalled advantages for a thorough and finished education.

All communications relating to admission, and all letters of inquiry, should be addressed to

REV. C. T. MILLS, D. D.,
Brooklyn, Alameda county, California.

35 23

anta Clara College, S. J.

TRUE AND FALSE MARRIAGE.

A Letter from an Old Man to a Young Woman.

BY HORACE GREELEY.

My Friend:

Can I err in my conviction that I heard you while conversing with a circle of your intimates last evening, speak of Marriage? Unless my ears deceived me, you declared, in effect, that you would never marry, unless your hand should be sought by one who completely answered to your conception of what a husband should be—one handsome in person, amiable in temper, generous in disposition, eminent in ability, but few years older than yourself, and either in possession of a fortune, or capable of speedily acquiring one. I am sure the draft of your little speech, to that applauding circle, was not materially different from this.

Now I do not care to question the desirability, in a husband, of the characteristics you thus indicated. I deem it well that he should be comely in feature, graceful in bearing, winning in disposition, and that he should not have seen many more years than those of the lady of his choice. I will readily agree that you ought to be able to regard him as your superior in wisdom, and I will not stubbornly contend that a like advantage in fortune should prejudice you against him, though this point requires careful consideration. I am sure that the happiest marriages I have known have been those of persons, who, thoroughly knowing and loving each other, have said, while still in the early prime of life: "True, we have little worldly wealth; but we have strong arms, and willing hearts; and we will henceforth combine our counsels, our energies, our efforts, hoping to share and enjoy the competence we shall win, as we have uncomplainingly shared the struggles and privations through which we achieved it." I would advise none to marry in utter destitution, but the couple who, after working and saving, two to five years in severalty, have combined their scanty, but well-earned means, and resolved to sew out, together a home, from the wilderness or prairie, and have thenceforth illustrated the virtues of industry and frugality in indissoluble partnership, have seemed to me among the wisest and happiest. If you doubt this, ask successively, the next half-dozen of the noblest grand-mothers you may meet, to tell you the story of their first ten years of married life, and see if those who started, not in want and suffering, but with a slender outfit, and nothing more but what they made, or grew, or earned, do not look back on those years of early trial with fullest and heartiest satisfaction. Let those who have wealth thank God for it; let them thank Him still more fervently if He has added the forecast and practical wisdom needed to render it a blessing; but let those who were born poor, and know how to work and save, be still more grateful, that they shall be able to say to their children: Whatever we give or leave you is the fruit of our diligence and thrift: we inherited nothing, and owe nothing to the accidents of fortune." I would have you realize that a decent competence, thus achieved, is far preferable, as a source of happiness, to a large estate acquired without effort or merit; for what we have really earned we are most unlikely to risk in speculation, or squander in foolish ostentation. Saving is far more difficult than earning; and had I one to live after me, I should value more, for his sake, a thousand dollars earned by his own hands, than ten thousand bestowed by me. The latter might easily take wings; the former would have no tendency to aerostation.

I am not regretting that you spoke of Marriage as something likely to be accepted or declined by yourself. Though reserve and silence on that theme may seem to befit maidenhood, circumstances may often dictate, if not compel, utterance; and, whenever you speak at all, I would have you speak frankly and truly. What pained me, in your averment, was its failure to recognize the moral or spiritual element in Marriage. Not that a man might be a libertine, a gambler, a tippler, a scoffer, and still bring himself within the scope of your requirement: I will do you no such injustice, take no such advantage of your careless use of speech, as to presume this. I am sure you did not deem it necessary to say that your heart and hand could never be given to a reprobate. But your words *did* plainly that you might be induced to accept one who possessed the qualities or enjoyed the advantages you indicated, though he had no fixed principles of faith or conduct, no lofty purpose of doing good to others, no moral qualities that elevated him above the multitude who live decently, behave respectably, and die decently. So that he be handsome, graceful, amiable, rich and not too old, you might accept one whose aspirations contemplated personal enjoyment and social respectability. I do not mean to be uncharitable, yet I deem this a fair deduction from your careless, but not insincere, declaration.

Can you wonder that the world is full of mismated people, of discordant households, of severed pairs, if husbands and wives are accepted with no more scrutiny of the essential characters than though they were invited to a ball, rather than to the most intimate companionship for life? Thousands are unhappily married. Legislatures and courts seek to reduce the number of the sufferers by proffering facilities of divorce.

In my deliberate judgment, based on the observations and reflections of many years, if all who choose were at liberty to repudiate their old, and select new partners in marriage every Christmas, there would not only be many more unworthy marriages, but far more suffering from unhappy unions than there now is.

I do not need to argue that those who come together intending to separate—no matter whether next year, next month, or to-morrow—are never really, though they may be legally, married. What seems to me vital is, that the millions whose incitement to marry is purely physical or material, who marry for wealth or position, or under the impulse of any basely selfish or sensual desire—shall be awed, if not repelled, by the consideration that the tie thus formed is essentially irrevocable, save by death—that, having once chosen, they can never repudiate this in favor of a second choice.

"But this does not prevent unfit, or unjustified marriages."

Certainly not, any more than the state prison prevents a counterfeiting, or robbery. When society and legislatures have done their utmost, vice and crime will remain. "It is needful that offenses must come;" it is, at all events, inevitable that they *will* come. We can, at best, but diminish their number, by rendering them, evidently, sources of more pain than pleasure to the average offender. And when the State says (as she does) to those who ask to be legally joined in marriage: "Understand and regard the fact that, having been so joined, you must be constant and faithful till parted by death,"—she has done her utmost to prevent the profaning and defiling of the holy and beautiful institution of Marriage.

Am I lecturing you? Yes, certainly. I do not imply that you would, consciously, be joined in unholy matrimony: I *do say* that you might be so joined unconsciously, if your words of yesterday are the expression of your deliberate purpose—if they fairly reflect the light in which you regard Marriage. Let me trust that they do not—that you spoke without thought—and without intentional insincerity, said what your deliberate judgment will repudiate and condemn.

Dear friend, do not accustom yourself to speak lightly of Marriage. If obliged to say anything, you may properly say that you cannot tell whether you will ever bestow your hand until one, whom you shall have learned to love, shall seek it; but I would not ever have you intimate an indifference, much more a repugnance, to Marriage. There have been, and will be many unhappy (because unworthy) marriages, but, that there was ever a single life prolonged to fifty or sixty years which was a truly happy one, I do not believe. However self-sufficient in youth, I judge that no one ever felt the coming-on of old age, and saw streak after streak of silver mirrored in the glass which reflects his thin, straggling locks, without sadly realizing that "It is not good for man to be alone"—nor for woman, neither.

That you may, in due season, be sought in marriage by one who nobly loves you, and whom you shall learn to nobly love—whom you may implicitly trust in all things, and who shall know you worthy of like confidence—whom you shall love while you live, with a love that death cannot weaken, is the greatest blessedness I can wish you; and that I do with my whole heart. Believe my earnest assurance, that no one has fully, truly lived, who has not profoundly, fervently loved.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Gum or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented. The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and use that their trade mark,

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by Editor Farmer.

SAN FRANCISCO, September 14.

Money and Exchange Table.

Exchange on England	108½x108⅝
Price of Gold	113⅛x113⅜
Value of Greenbacks	88@89
Value of Wheat in Liverpool	12s. 10d.
do do New York	160@175 bush

Price of Money in Eastern Cities.

New York—Money very abundant and rates as low as 2@3 per cent., per annum on call, at 4@6 on time paper.

Boston—Money very plenty, 3@5 per cent. on call, 5@6 on time.

Chicago—Money capital employed 4@6 per cent. on call, 6@8 on time.

Money in England.

Bank of England rates 2 to 2½ per cent, heavy supplies, money very easy in business circles.

Money in France.

Money in the form of Gold is now showing very abundantly, the people among the lower classes offering Government all it wants to pay the Prussian Indemnity.

GRAIN AND FLOUR MARKET.

The great excitement in the Grain market the last few weeks has we think reached its zenith, as figures show that our rates here 3,75 the cental, freight and expenses, exceed the Liverpool rates by 1s. sterling, and thus no prospective profit by shipments.

Undoubtedly one cause of the advance recently has been the increased demand and shipment of Flour to China, a market that secures in all future years a sale for California Grain to a vast extent, far greater than even to Liverpool, for China will open the mouths of 400,000,000 people for our Flour.

The high rate of Wheat now should satisfy all who hold Wheat that even if it advances a trifle more—now a sale is like "a Bird in the Hand" better than waiting to catch *two* in the bush, if you can.

Barley in good demand, Oats steady, Corn, Hay, and other products steady sale. Feed Grains full supply.

Potatoes, Onions, and Root Crops large supply and prices low.

Straw, once burned in the field, now $8 and $9 per Ton.

Wheat California, ₩ 100 lbs old	$2 40	@	2 55
do Extra	2 60	@	2 75

Retail Prices in the Fruit Market.

The Fruit market shows an abundance, but too much poor fruit, small, and almost worthless. It is to be regretted that so much of this kind should be sent hither.

Autumn Pears show better, and some fine Apples. Second crop Figs come in freely, and Melons abundant, Grapes now show their *big bunches* and tempt the appetite.

Apples, ₩ box	1 00	@	1 50
Apples, new, ₩ lb	3	@	5

Cosmopolitan Hotel,

SAN FRANCISCO,

CHANGE OF PROPRIETORSHIP

H. H. PEARSON,

LATE OF THE RUSS HOUSE,

Having bought the interest of Messrs. Tubbs & Patten, of the Cosmopolitan Hotel, has secured a lease for a term of years of this well known and elegantly furnished Hotel. His previous reputation assures it being kept in first class style, while in order to keep pace with the times he intends to make important reductions in the scale of charges. His intention is to make it a family and business house, while his large connection with the travelling public warrants him in expecting a large amount of country, Pacific coast and Eastern patronage.

The prices will range from two to three dollars a day for ordinary accommodation. Board by the week or month as per contract. The table will be kept on the most liberal scale and many improvements introduced. The spacious reading room is the finest of its kind in the city, while the furniture and fittings generally are superior to those of any hotel in San Francisco. The house will be thoroughly overhauled

Mr. PEARSON assumes proprietorship this day, August 1st.

PRICES REDUCED

TO SUIT THE TIMES

For Sale at the Farmer Office.

WARREN & CO.

The California Farmer,

THIRTY-SIXTH VOLUME

Every Thursday and Mailed Friday's at $4.00 per year in advance, when payments are delayed $1 will be added.

REDUCTION IN PRICE

AND

Liberal Club List

With a desire to place the CALIFORNIA FARMER in every family on this Coast we have concluded to make a

Liberal Reduction in Price,

and to place it at such a sum as that every Cultivator of the soil could have it.

We have announced the Terms in another column, and here we give additional inducements to our patrons and friends to not only subscribe for the Farmer, but to secure other valuable Publications at a moderate price also.

We make this announcement for the express purpose of meeting the wants of a large increasing Agricultural population, and a large emigration that will soon be coming to our shores, who need the information of our resources, and we feel we can serve our State in no better way than to give to these new comers the

CALIFORNIA FARMER

at a very reasonable sum, so that every family can have a copy.

PARIS, August 12.

FERTILIZING MANURES.

The war has among other scourges inflicted on France quite an epidemic of frauds in commercial manures—for agriculture has had this season to depend largely on chemical preparations. At present every fertilizing agent is subjected to analysis before purchased, and in some instances the samples are sealed and deposited in the courts. There is a manufacturer in the vicinity of Paris, who prepares phosphoric acid, more or less immediately rendered soluble by the addition of sulphate of ammonia or nitrate of potash and soda to superphorate of lime, either in the bone or mineral form, the gypsum. He will pay the fee to any chemist a purchaser desires to analyze his preparations. The price varies from 20 to 30 francs per cwt., according to the richness selected and 4 to 5 cwt. per acre is the quantity supplied—the succeeding application of manure to be that from the farm yard. Oil-cake has been extensively employed also as manure this season in the form of dust, as well as beaten up into a "gruel."

A few philosophers are occupying themselves with the question, can the soil be rendered productive without the addition of organic matter. This involves the theory propounded by M. Ville, that mineral matters, in the exact proportion extracted by the crop, is all the soil requires to maintain fertility. The Carob tree, commonly called St. John's Bread, grows luxuriously in Spain and Italy on arid rocks, ferns and orchids fling plenty of humus. Can plants fructify in a soil deprived of organic matter, and an atmosphere without carbonic acid?

SALT AS MANURE:

Some experiments have been made to test the efficacy of salt as a manure on the School-farm at Grignon. The soil is very calcareous and so far favorable, and uniformerly tilled. The cultivation was also alike. The salt was applied at the rate of 3 cwt. per acre, and tested beside phosphates and salts of potash. The effect of the salt was apparent—in greater luxuriance—and the grain in threshing separated with a marked facility as compared with that grown on the other manures. The return was one fifth greater, and the weight of the grain superior. Similar trials are made with barley on portions of ground manured with dung watered, and not watered with a solution of salt. In the yields, there was hardly any perceptible difference. Beet was experimented upon, with farm-yard manure, as in the case of barley. There was a difference of 18 per cent. in the yield in favor of brine.

WEEDS—CATTLE PLAGUES.

Bavarian agriculture complains bitterly of the extraordinary development of weeds—such as wild mustard, poppies, and tares—which have positively choked crops. Cows have died in such numbers from the plague, that butter sells for three francs a pound, and milk five sous a quart. It is eight and ten in Paris, after being "manufactured." The Austrian government, notwithstanding all the inducements it has offered, to introduce the growth of forage and root crops, admits defeat. The farmers will adopt none of them—they rely upon the fallow, between wheat and maize. But they have taken quite a passion to introduce into this "rotation" the culture of industrial plants, such as tessel, and bamboo cane.

TILLAGE, CROPS, COLLEGES.

Practical farmers are discussing the question, ought the soil to be deeply tilled in time of drouth? It is asserted that by so doing, crops are positively injured, especially in the case of chalky soils. Efforts are being made to engage agriculturists to improve the varieties of their ordinary cultivated crops, as has been so successful in every description of live stock. The radish is cited as an example of what can be effected by a little patience and attention. By the selection of individual plants with peculiar characteristics, and a careful development of these new riches are to be found. By the session of territory France loses one of her best tobacco producing districts, and efforts are being made to introduce its culture in the rich valley of the Rhone. There are two "chairs" vacant in the Agricultural College of Grignoo and Grand Jouan Candidates must submit to a searching competitive public examination before a jury of the first agriculturists of the nation. The programme of subjects is exhaustive. The domestic breeding of hares is succeeding in a commercial sense, as well as rabbits. It is found that the leverets taken in a wild state, lose the desire for reproduction, devote themselves to celibacy. But succeeding generations only increase in amorous tendencies as they do in wildness, and must have not "petting" in their enclosures. The domestic hare is nearly as prolific as the rabbit, and while rearing one progeny, gestation is going on for another—the two uterus being engaged alternately. The rearing of *leporides* is equally as successful as their skins as an article of industry is in great demand. No fur is better for hats, or mixes better with silk or woolen.

The battle fields round Paris are being purified by the planting of shrubs or the sowing of seeds of quickly growing plants over the grasses. Those plants, such as sun-flower, mustard, Jerusalem artichokes, rye, &c., having an affinity for nitrogenous matters are perferred and cut green for fodder. No plant absorbs nitrogen so rapidly as the sunflower—as ravenous as the stomach of an ostrich. A pigeon was buried between the roots of a sunflower, after some weeks not a vestige of the bird was found—the plant had devoured and digested even the feathers.

SALE OF PRINCE METTERNICH'S HOCK.

The usual annual public sale of Prince Metternich's last year's vintage of Schloss Johannisberger wines was held at the castle of Johannisberg, on the Rhine, on the day appointed, and a large number of the most eminent houses were assembled, among whom there was a great competition. The quantity offered for sale consisted of 13 stucks and 14 half-stucks, containing altogether 12,022 Rhinelandish masse, and the total amount realized was 12,680 florins, giving an average of 684 florins per stock. The first lot was knocked down at 400 florins, but the others gradually crept up as the competition became keener and the biddings more spirited, so that the lot was sold at 755 florins, the highest price obtained at the sale. These prices were, however, considerably lower than those obtained last year. A day or two before another was held at Castle Vollrath, near Rudesheim, of the produce of Count Matuschka-Greiffenklau's vineyards. The best half-stock of 1868, Castle Vollrath, which at the sale last year, was bought in at 1,000 florins, was knocked down at 855 per half stock. The wines of 1869 fetched also very moderate prices, the highest figure being 345 florins, and the lowest 255 florins, giving an average of 317 florins. For the wines of 1870 the prices paid were better, the highest being 460, florins, the lowest 245 florins—average 360 florins per stock. Some other sales of importance have also been held on the Rhine, which were numerously attended by purchasers from almost every country, including even the United States. Owing to the not very favorable prospects of the vintage this year, and the poor quality of the produce of 1869 and 1870, the older wines were in the greatest demand, and those of 1862, 1865, and 1868 realized most enormous prices. Thus, at the public auction of Langwerth von Simmern, Eltville, the best half-stock of 1868 in sale was knocked down to Herr Drexel, of Frankfort, for 4100 florins; and the best half-stock (298 masse) of 1862, at the auction of Herr Eugene Pfeifer, at Erbach, was sold to the house of Philip Reis, at Mainz, for the sum of 3250 florins.

INTERESTING TO BRANDY-DRINKERS.

A fact worthy the notice of brandy-drinkers appears in the recent statement of the Internal Revenue Bureau of the amount of spirits distilled in the country. There appears to be, according to that statement, but 700,000 gallons of brandy distilled from fruits, while there are 161,000 gallons of compounded liquors made in imitation of brandies and sold at the real old cognac.

NEW SERIES.

LEAVES FROM MY JOURNAL.

BY M. A. DARLEY.

Number Five.

STEAMER EXCURSION IN NEW YORK.

The trip of the steamer, Plymouth Rock, to Long Branch is the perfection of New York luxury this summer. The boat is magnificently furnished, and not only is splendid in its guilding and its appointments, but abounds in such comfortable things as carpet, chairs, that one can move to the shadiest corner of the guards. I felt grateful to Fisk as I enjoyed the excursion the other evening, and admit that he appreciates and furnishes the traveling public with good things. I sat in the shade where I could watch the beautiful panorama of New York Bay, and after passing the Narrows, and the blue water of the distant ocean, I listened to the singing of the Canaries in their guilded cages as they tried to mimic the exquisite finish of Levys Cornet playing, and I thought that after a hot day in the city, a man must be impossible to please, who would not experience a delicious sensation of pleasure. As for myself I took off my hat, laid down my paper and sighed only when we touched the wharf at Sandy Hook.

RAILROAD TRAVEL TO THE BEACH.

The Railway ride along the beach does not dispel the luxury of enjoyment, on either side the landscape is attractive. In the morning my seat is always chosen where I can look at Pleasure Bay, and the picturesque hills around the Highlands rejoice in the golden light of the King of Day, but in the afternoon, after such a sail, with the music yet ringing in my ears, I take my seat where I can watch the fading away of the light, the graceful approach of the purple shadows as they dance before the Queen of Night, and where I can hear the solemn monotone of the breakers as they dash in fantastic forms on the beach. The sight of them keeps me cool, and sometimes as I watch the spray as it jumps in the air, I almost catch its inspiration and could throw up my hat and cry out in boyish rapture, I forget that the breakers are treacherous and that perhaps they are laughing at the mischief they have been doing during the day.

The train stops, and the afterward enjoyment is delightfully chained when I see the blue eyes of my waiting cousin watching for me, I enjoy unseen her searching glance and the roses that blush on her cheeks. For a moment, as the crowd of passengers hide me, I can see the shadow of disappointment in them, but at last I jump forward and they light up again as the words of welcome are spoken. As "Charley" trots along to Little Silver I listen with a pleasant feeling of contentment to the ripple of her gentle voice and point out to her sympathetic glance, the beauty of the twilight landscape. The magic of the heavens charm me, as one by one the stars glitter in the firmament, the richly colored clouds fade away, except one which changes from gold to purple, and then shows by its silver lining that it hides the Lady Moon. She is too modest to dazzle us at once with her glory. Coquettishly she peeps at us, then she wraps the cloud about her, until suddenly she throws her veil aside and smiles upon us royally.

HOME.

At last we are home, and the Captain's cheery hail arouses us from our dreamy mood. The trees that hide his "Cottage by the Sea" seems to greet us as the winds play with their leaves, and the groaning tea table with its weight of good things looks so bright and tempting that our enjoyment is not destined to rest until the drowsy influence of the sea air at the "midnight hour," and the solemn voice of the ocean lull us to a dreamless and refreshing sleep

ADVERTISING AS A CRITERION OF CREDIT.

A wholesale grocer in this city, who became rich in his business, says his rule always was, when he sold a bill of goods on credit, to immediately subscribe for the local paper of his debtor. So long as his customer advertised liberally and vigorously he rested, but as soon as he began to contract his advertising space, he took the fact as evidence that there was trouble ahead, and he invariable went for his debt. Said he, "The man who feels too poor to make his business known, is too poor to do business." The withdrawing of an advertisement is an evidence of weakness that business men are not slow to observe and act upon.—*Exchange.*

NEW SEED SOWER.

A new Seed Sower has just been introduced to our Coast by Mess. Linforth, Kellogg & Co., to which we call the attention of our Grain Planters and sowers of all root crops, and many new implements of agriculture are now offering by this House worthy special attention.

CULTIVATION OF THE TAPIOCA PLANT.

[We call special attention to the following article on the cultivation of Tapioca, which we take from the *British Trade Journal* Reports, just received by us. We feel confidant Tapioca could be grown in California on our wild waste lands with profit. See the report of it.—ED. F.]

His Highness the first Prince of Travancore has addressed a letter to the Madras Goverment on the importance of introducing and extending the cultivation of the manioc or tapioca plant in the Madras Presidency. "Some twenty years ago," writes his Highness, "the manioc was scarcely cultivated in Travancore, but of late years its cultivation has been rapidly extending. A large tract of undulating land between the great forests, fringing the ghauts on one side and the sea coast on the other, is formed of hard laterite soil, little fit for cultivation, excepting the valleys which intersect them, and overgrown with stunted vegetation. These hill-sides are fast becoming green with manioc plantations, carried on principally by the peasant population. Limited as the cultivation of manioc is, even in Travancore, it has, I am convinced, amply shown that, in the ease and cheapness of production, in the abundance of yield, in its adaptability to almost any soil, in its almost entire independence on the seasons and on water supply, its nourishing quality as an article of diet, this stands behind no other agricultural product known in India. While rice will meet the necessities of the higher and middle classes, the manioc is, one may reasonably believe destined to a great extent to become for the poor classes of India what the potato is in Ireland what the bread-fruit is in Java and other islands in the Indian Archipelago, and what the date palm is in Arabia." After describing the process of cultivation and of preparing the tubers for food, his Highness thus sums up the advantages of the cultivation of the tapioca plant:—(1.) It grows in almost any soil. (2.) The labor required for its cultivation is comparatively small, and of the simplest sort. (3.) Except during the first month or two, its growth is almost independent of rainfall or irrigation. (4.) Its productiveness is decided larger than that of any other article coming under dry cultivation. (5.) The mode of preparing it for the market or for domestic consumption is simple. (6.) The dietetic nature of it is excellent. The Government, in their Order, write that they highly appreciate his Highness's enlightened wish to extend the cultivation of the tapioca plant, which is said to succeed so well in the poorest soils of Travancore, and to be so acceptable as an article of food. The Collector of Tinnevelly and the Committee at the Sydapett Farm have been instructed to make experiments of the cuttings which his Highness very liberally offers to transmit, and report the result in due course.

FUTURE SHEEP HUSBANDRY.

Taking everything into consideration, we are inclined to predict good things for the future of sheep husbandry in this country. At present both wool and meats are high in all principal markets of the world. It is not possible with sheep, as it is with swine, to increase production beyond the natural demand for consumption except by continuing effort for a series of years; hence it is fair to except a continuance of the present healthy demand for all grades of fleece, and for superior qualities of mutton for an indefinite future. The flocks of the country are now, as a rule, in the hands of good shepherds. We doubt if there has ever been a time when sheep of all classes were healthier than now, as evidenced by the soundness of staple and full growth characteristic of the domestic fleece now coming forward to market. There is certainly much to encourage the general flockmaster, whether his specialty be the production of fine wool, or mutton and wool, or breeding animals of any of the principal varieties; or whether his locality be California, or Colorado, or Illinois, or New England, or either of the Southern State.

[Let the Sheep-men of California read the above remarks upon their interests, and the prospect before them, for these are true. Never before in California have we had so fine a clip of Wool, nor so good a price, and never have so fine exhibitions of Sheep been made at our Fairs, and the words we here quote from the *National Live Stock Journal* apply truly to California.—ED F.]

RAINS.

It is observed during the late war of the Rebellion in our own Country, and also during the war between France and Germany, that heavy and continuous rains invariably followed the occurrence of great battles. The fact has given rise to much speculation as to the reason of the thing, with a sort of general consent that it results from concussion of the atmosphere, caused by repeated discharges of artillery.

Many lose the opportunity of saying a kind thing by waiting to weigh the matter too long. Our best impulses are too delicate to endure much handling. Speak promptly when you feel kindly.

HARVEST IN ENGLAND.

Though there is an old proverb that "drought never bred dearth in England," we have had such continuous droughts of late years that the pastures have suffered, and there has been a dearth of green crops. If the corn crops has not suffered. A dearth of grass and turnips and mangold and clover is almost as serious in this generation as a dearth of corn was in the days of our great-grandfathers. Free trade has made us far less dependent on our harvests; but our wonderful prosperity, and the rapid development of population and of luxury, have made us more dependent than ever on the produce of the meadows. The price of meat and milk and butter is a more important question to most householders than the price of bread; and a showery summer, with its plentiful after-growth of grass, its enriched pastures, its bountiful supply of food for sheep and cattle, would more than compensate for the injury it might inflict on the hay and the corn. The rains of June have at any rate given the farmers abundant keeping for their stock, and a modern farmer is as anxious for his flocks and herds as for his standing corn. There are, however many reasons for special rejoicing that, while the green crops are so promising, there is no fear for the harvest. There is an unusual deficiency to meet. The coming harvest has to supply the waste of one of the most desolating years in modern history. In a large part of Europe the labor usually given to preparation for the harvest has during the past twelve months been seriously diminished. Multitudes who are usually employed in tending the fields have been turned aside to battle; and the reverse of the prophecy has been witnessed, for the plowshare has been turned into the sword. Large tracts of country, on which last years's crops were standing in all their autumn richness and beauty, were trampled over by armed hosts, and the ripe crops were turned, in the wanton wastefulness of war to the base uses of threshed straw.

THE CATTLE DISEASE IN ENGLAND.

The foot and mouth disease among cattle in Northamptonshire has considerably increased during the past few weeks. A return just issued by the county authorities, shown that there were 79 cases reported by the inspectors during the past week, and 31 and 16 cases respectively during the two weeks immediately proceeding. The disease has assumed its worst form in the nothern division of the country adjoining Leicestershire, and in the Northampton district. Up to Saturday morning the reports received at the office of the Clerk of the Peace at Preston, were as follows: Kirkham police division 69 animals affected; Clitheroe, 731; Burnley, 96; Leyland, 416; Over Darwen, 20; Bacup, 10; Blackburn, 160; Garstang police division, 84; total, 1,586. In the borough of Preston there are 38 cases almost wholly in the township of Fishwick. Four firms of cattle salesmen in Liverpool were summoned on Saturday at the County Magistrates' Court, Liverpool, on a charge of having acted contrary to the provisions of the Contagious Disease (Animals) Act of 1868, in having on the 14th inst., at the Stanley Market, Liverpool, exposed for sale certai cattle suffering from the foot and mouth disease. The case of Hugh Verdun, of the firm of Verdun & Cullen, was taken first as a test of the validity of the proceedings. A veterinary who had examined the cattle stated that they were suffering from the disease, though in a slight form, and immediate slaughtering was desirable. On behalf of Mr. Verdun it was contended that the justices had no power to inflict a summary penalty, as that power was not conferred by the act of 1869, which it repealed all previous statues on the subject, did not contain a clause providing for a penalty.—*London Daily News.*

WOOL MARKET OF NEW YORK.

[Some remarks upon the markets for Woolen Goods, and value of Foreign Wools made by Walter Brown & Co., in their Circular of September 1st, as the cause of dullness of the Wool market now.—ED. F.]

The Dry Goods market, during the past few weeks, has been very dull, and producers claim that the prices realized are unremunerative. Should this stagnation continue for some time longer, a weakness may become prevalent, which would be likely to check any upward tendency in the raw material.

TEXAS WOOLS are in good demand, at quotations: Receipts are light, and transactions necessarily limited.

FOREIGN WOOLS have been moving very freely, with some large transaction in Cape, Australian and South American Wools. The importation of these Wools will probably be heavy during the next few months. Prices remain steady. Medium and Carpet Wools are in very limited stock.

One of the largest hotels in Philadelphia is owned and managed by a woman, and in one store, among several large ones owned by women, a business of over $100,000 a year is done.

Agriculture.

PLANTATION TALK OF THE RIGHT RING.

The great need of Louisiana and of the South is a widespread, varied industry. To the accomplishment of this grand object should all our energies be directed. It is practicable—within the limits of the attainable. But how shall it be secured? That is the absorbing question to which we should address ourselves, and with a perseverance and pluck that will not brook defeat. With this spirit and this determination success is certain. Nobody thus acting, and with reasonable means, ever failed to achieve anything that is rational and beneficial. Let us start with the clear understanding that we intend and are going to triumph. This will nerve us for the conflict and carry us through it. Let not our readers suppose that we lay too much stress upon this enthusiastic confidence in final victory.

Whoever won a prize in a hard struggle with a half-hearted purpose? An unwavering conviction of the certainty of conquest leads mighty strength in battle, and is a potent element in accomplishing the end in view. We have the strongest possible reasons for the confidence we speak of, as we demonstrated last week. We have all the natural elements, and in the greatest profusion, for the varied industry which is the great desideratum with the South, and everything else, therefore, depends upon ourselves. Hitherto, we have known splendidly how not to do, and we have succeeded in doing it!

The question now is, how to do it. In the first place, we answer let us not be afraid to do it. We read a story some years before the war which illustrates what we mean, and will bear repeating. An ambitious young gentleman, in South Carolina, we believe, of more than average brains, and of a stupendous turn of mind, hit, one day, upon a new idea about something, and the more he thought of it the more confident he became that it would be valuable to himself and society, if practically carried out. But he was poor, and did not know how to go to work to achieve his object. His father was dead, and the only person he thought could help him in emergency was a rich old friend of his father, whom he had never seen, and to whom he resolved to apply. Fortifying himself with letters, he in due time reached the aristocratic mansion of his father's friend, and laid his plans before him. The old gentleman received him with the courtesy for which he was distinguished, and listened to his recital with a patience and attention that made his heart beat with high hopes of success. Having finished, the rich man began thus; "Then you are really the son of my old friend——?"

"I am Sir," responded the young man.

"And this scheme is really one of your own devising?"

It is, Sir."

"The idea originated with you?"

"It did, Sir," proudly responded the ambitious youth, his eyes fairly sparkling with joy.

"And you have come to me to aid you in carrying it out?"

"I have, Sir."

"Well, Sir," continued the proud man, "if all this is so, how dare you disgrace your father, your father's friends, your State and your section by turning Yankee, and making an invention!"

The young man shrank away trembling in every limb, and feeling as if he had almost been guilty of some disreputable act. It is needless to say that his invention was never again heard of. The times have happily changed in this respect; but let us not be afraid of turning Yankees by making inventions. Let us not be afraid of any new notions. These new notions are abridging time and space, saving, multiplying resources and blessing, clothing the desert electrifying humanity, and making all the earth akin. We have been too suspicious of them, and have been left far in the rear in consequence. One of the methods of *doing it* is to go to thinking. Thought—it lies at the foundation of everything else. It is the duty of our Southern farmers and planters, traders and mechanics and laborers, to go to thinking and to keep thinking. Thinking and acting, acting and thinking! These will accomplish marvelous results. We must pause until next week.—*Home Journal of Louisiana.*

Fatigue.

In order to understand the influence of an irregular expenditure of force, we need only to remember that when greatly fatigued we lose our appetite, and that when the stomach is in full activity, the limbs are indisposed for performing hard work. Insufficient nourishment and fatiguing work, during the period of growth, stop the corporeal development of the individual.—*Liebig.*

Alas for Ireland.

It is announced that the Potato Rot has appeared in Ireland, and great alarm is felt lest another calamity like 1846 and '47, should fall on that country.

A new treatise on precious stones declares that after all, mankind if wise will say of 'precious stones, the most valuable as well as the most useful stone in the world is the grindstone.

They sell "horse lunches" in the New York in the grocery stores. They are bunches of grass about the size of a roll of wadding.

SAVED BY A HORSE.

Let any man who ever struck a faithful horse in anger read this true story and be ashamed of himself:—

Some years since a party of surveyors had just finished their day's work in the north-western part of Illinois, when a violent snow storm came on. They started for their camp, which was in a grove of about eighty acres in a large prairie nearly twenty miles from any other timber.

The wind was blowing very hard, and the snow drifting so as nearly to blind them.

When they thought they had nearly reached their camp, they all at once came upon tracks in the snow. These they looked at with care, and found, to their dismay, that they were their own tracks.

It was now plain that they were lost on the great prairie, and that if they had to pass the night there, in the cold and snow, the chance was that not one of them would be alive in the morning.

While they were shivering with fear and the cold, the chief man of the party caught sight of one of their horses—a gray pony known as "Old Jack."

Then the chief said, "If any one can show us our way to camp, out of this blinding snow, Old Jack can do it. I will take off his bridle and let him loose, and we can follow him. I think he will show us our way back to our camp."

The horse, as soon as he found himself free, threw his head and tail into the air as if proud of the trust that had been put upon him. Then he snuffed the breeze, and gave a loud snort, which seemed to say: "Come on boys! Follow me; I'll lead you out of this scrape." He then turned in a new direction, and trotted along, but not so fast that the men could not follow him. They had not gone more than a mile when they saw the cheerful blaze of their camp fires, and they gave a loud huzza at the sight, and for Old Jack.

A MUCH ABUSED SERVANT.

BY MRS. J. B. MCCONAUGHEY.

It is always sad to see a faithful servant meet with abuse and unkindness from those he has faithfully served; but man's most useful and faithful servant, the horse, oftener meets with this than with kindness and tender consideration. It is a blessed thing that the Society for the Prevention of Cruelty to Animals has taken this matter in hand, to a certain extent. So no man dare openly, in cities and large towns, maltreat his faithful slave. But the injustice still goes on privately and even publicly in country places. Boys learn the lesson of cruelty from their fathers, to practice it over again in their own lives. There is a long score to be reckoned up at the last day for this crime, for it is nothing else. A God who delighteth in mercy and watches with tender care even the smallest of his creatures, providing for each food in its seasons, will not suffer one act of cruelty and harsh-dealing to pass by unnoticed.

The very tones men use in speaking to their horses are brutalizing to all the finer feelings of their nature. Girls never trust your happiness with a young man who is harsh in tone or manner with his horse. Depend upon it he who can tyrannize over this faithful servant, will not be slow to try his hand in his own household.

It is delightful to walk about a farm-yard where all the animals are pets. I know a young man whose beautiful year old colt walks up and raises his fore foot to shake hands with his master. A span of fine horses trained (not broken) on a New England farm, used to take the children to school a mile distant year after year. After their merry load had unloaded itself, they turned about as carefully and orderly as if the farmer himself had been driving and trotted off home alone.

Retributive justice is often meeted out to those who have practiced a course of cruelty towards animals. Even the crushed worm will sometimes sting the foot that tortures it.

I know a young man who was noted for his hard dealing with his horses. Even the poorest old hack was lashed into a race horse pace in his hands. Once, in anger, he harnessed his horse by the tail to the plow and compelled him to work in that manner. The next day when attempting to harness him, the tortured creature gave him a blow with his hoof that in a few days brought him to his grave. The punishment was severe, but there was but one verdict concerning it among the neighbors.

TIE HIS EAR.

A groom, mounted on a high mettled hunter, entered the High Street of Coldstream and when opposite Sir John Majoribanks' monument the horse began to plunge and rear to a fearful extent, swerving to the right and then to the left, but go forward he would not, nor could all the exertions of the groom overcome his obstinacy. The street was filled with people expecting to see the animal destroy himself on the spikes of the iron railing round the monument, when Mr. McDougall, walked up to the groom and said, "I think, my man, you are not taking the proper method to make the horse go; allow me, if you please, to show you a trick worth knowing". "Well," said the groom, "if you can make him go, it's more than I can;" when Mr. McDougall took a piece of whip-cord, which he tied with a firm knot on the end of the animal's ear, which he bent gently down, fastening the end of the string to the check-buckle of the bridle; this done he patted the horse's neck once or twice, and said, "Now, let me see you go quietly home like a good horse." Astonishing to relate, the horse moved off as gently as if nothing had happened. Mr. McDougall says he has seen in London horses which no manner of force could make go, while this mild treatment was always successful.—*Kelso Chronicle.*

Large Potato.

The largest Early Rose potato we have heard of this season, was raised by William P. Thomas, Newton, Delaware county, Pa. It weighed two pounds nine oz.

HARNESSING HORSES CORRECTLY.

When harnessed correctly, a strong horse is a powerful animal; but by an imperfect adjustment of the gearing, many strong teams are shorn of half their strength; and many are often worried by an improper fit of the harness, or by a decidedly bad attachment to the vehicle they are drawing than by all the service they perform. But a few teamsters have ever been taught how to harness a horse correctly; and fewer still have learned that there is a right way and a wrong way to hitch a team to a carriage. When a harness is taken from the shop, every part should be adjusted to fit the horse that is to wear it.

Back-Band.—The back-band should be let out or buckled up, until it will be neither too long nor too short when the animal is drawing a load. Many a good horse has had a large sore made on his back simply because the back-band of the harness was buckled up too far.

Breeching.—The breeching should also be adjusted properly, so that the horse will not seem like a man in a boy's coat, nor like a colt wearing the harness of a full grown horse.

Collar.—The collar should fit as neatly to the animal's neck as an easy pair of shoes set on one's feet. The collar should never be so long that a man can thrust his arm easily between the neck of the animal and the lower end of the collar. Many horses especially—old ones—when thin in flesh, require collars so small that they cannot be put over the heads of the horses that wear them. It is of eminent importance that the proprietors of teams should see to such minor points; and provide collars that are open at the top or bottom. Every horse should have his own collar and harness as much as every man his own boots and coat.

Lines.—The lines are often adjusted in such a manner, that the heads of both horses are hauled away from each other so far that the team cannot travel easily. At other times their heads are drawn too far inward, toward each other. The lines should be adjusted so that the heads may be held just as far apart as the length of the double whiffletree.

Pole.—When a team is attached to a carriage, or lumber wagon, the breast-straps, stay-chains or neck-yoke should be so adjusted that the pole or tongue cannot strike either horse. The tongue is often allowed to have so much play that it whanges the arms or shoulders of the team with terrible force, when the vehicle is being drawn over rough ways. The neck-yoke straps, or tongue-chains, should be drawn up so as to elevate the tongue between the shoulders, where the lateral jerking or thrusting will be received by the gearing on the necks of the animals, rather than against the unprotected arms or shoulders of the team.—*S. E. Todd.*

JAPANESE SILK WORMS EGGS.

One Hundred Cartons of Japanese Silk Worm's Eggs of very superior quality to be sold very reasonable in lots to suit purchasers.

Apply at the FARMER OFFICE,

320 Clay Street, San Francisco.

Best machine ever offered for paring, coring, quartering or slicing apples. Does the entire work expeditiously, promptly and well—separating core and parings from fruit at once. Will prepare more fruit for drying, pies, or family use than six ordinary parers. For farmers it is indispensable. Fruit can be taken care of in season, instead of allowing it to rot in the orchard. Three times the price of the parer can be saved on every crop. A barrel of apples can be got ready for pies in one hour, saving in labor alone, in a single year, many times the cost of the parer. Territory for sale. Agents wanted. Send for circular.

TIPPECANOE APPLE PARING MACHINE CO.,

40 Courtlandt St., N. Y.

Apply at FARMER OFFICE.

OIL CAKE MEAL

THE BEST FEED KNOWN

FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz. Indian Corn Meal, 11 per cent, Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 22 2-100 per cent. For life-sustaining properties to all stock exposed to sudden changes of weather or over-driving has no equal.

For MILCH COWS it is particularly valuable, increasing the quantity of milk and greatly improving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other feed generally mixed with the mash of bran, slops, roots, or other feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the elasticity and suppleness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($40 per ton,) it is the cheapest food in market. It is now selling in New York at $43 per ton; and at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable food known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on the coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

PACIFIC OIL & LEAD WORKS,

NOS 3 AND 5 FRONT STREET,

San Francisco.

TRUE'S

IMPROVED

POTATO PLANTER.

This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such size slices as the farmer may prefer; drops them pieces with the most perfect regularity, and covers them perfectly and does all this as fast as a horse can walk over any ground that can be plowed

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a boy plant six acres of potatos in a day, is of inestimable value because the days in which PLANTING can properly be done are very few, while he has all summer and FALL in which to cultivate and dig

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attention to his other spring work, which would otherwise be overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

A NEW ARTICLE.

Composition Pipe for Conducting Water.

THE ATTENTION OF RAILROAD COMPANIES, Farmers, Dairymen and others, is called to our Pipe for leading water. It is lighter than cast lead pipe, and much cheaper than iron, will stand heavy pressure, and deliver about one-third more water than iron pipe, provided the sizes are the same.

We are now manufacturing all sizes, from one to two-inch, and can fill large orders at short notice. put on reels for shipment, the same as lead pipe.

Samples can be seen at our office,

No. 11 California Street.

THOMAS H. SELBY & CO.

33-20

Horticulture.

INSTINCT IN PLANTS.

The root constitutes the plant's mouth. It terminates in a little sponge. The sponge drinks up the moisture from the surrounding earth. Every boy has seen in the woods in the roots of some tree planted by the birds or the winds in the crevices of a rock, wandering down the sides of the great boulder in search of nourishment. Dr. Darwin tells of a case in which a horse chestnut, growing on a flat stone, sent out its roots thus in forage for food. They passed seven feet up a contiguous wall, turned at the top, and passing down seven feet on the other side, found the needed nourishment there which their own barren home denied them. A yet more singular instance of this search for food is related. A seed had been dropped by one of nature's husbandmen, a bird, in the decaying trunk of an old tree. It sprouted, put forth roots, branches and a little stem. But its roots in vain sought nourishment at the breasts of its dying foster mother. At length, abandoning all hope of support from her, they pushed out from home to seek a living. They dropped to the ground, a distance of sixty or seventy feet, and fastening there, succeeded in securing an independent livelihood. As time passed on the old trunk died, decayed and disappeared. The new tree remained suspended as it were in mid-air, the roots proceeding downward and the branches upward from a point about equi-distant between the two.

A SUGGESTION TO AGRICULTURAL SOCIETIES.

The enterprise of our national, State and local agricultural societies has done much to benefit the farmers and the community, by improving stock, bringing labor-saving machinery into notice, and making those interested in the science of the soil familiar with new methods of tillage. But there is one feature yet lacking, one want to be supplied. There should be a forge at every agricultural fair this fall, and horse-shoers should be induced to show their knowledge and receive the premiums which their skill may entitle them to. One-half of the lame horses throughout the country are made so on account of bad shoeing, and the loss of the labor of a horse makes up a considerable item in the sum total of the wealth of a nation. Such competition would be of vast benefit to every owner of a horse, and the information that the trial would elicit could not fail to be interesting. If once introduced we feel certain that it would prove a most attractive feather of our New Eng. and agricultural gatherings.—*Westfield News.*

HOW TO MAKE GOOD CEMENT WALKS.

Having previously graded and rolled the ground, heat your tar very hot, and with a long-handled dipper begin at one end of a pile of quite coarse gravel, pouring on the tar, quickly shoveling over and over so as to mix thoroughly. Cover the ground two and a half or three inches deep with the tarred gravel and then roll. Clean the roller with a broom as you proceed. Then put on a layer of finer tarred gravel one and a half inches thick, and roll. Then sprinkle the surface with hot tar, spreading the tar with a broom; finally, cover the surface with a light coat of white sand, and your walk is complete, ready for use. It will improve in hardness by age. Provide portable tar kettles, screens, a roller not very heavy, and tools for systematic work, and you can hardly fail to derive satisfaction.—*Scientific American.*

FORESTS.

The disappearance of our forests and the growing scarcity of trees being of such deletrious effect upon our climate, soil, and sanitary conditions, has been elaborately referred to by us in former issues, and we are pleased to note that a suggestion made in our pages is to be carried out by the Lake Shore and Michigan Southern railroad, which will plant chestnut trees on each side of the track of its new branch to Grand Rapids. The railroad companies have a special incentive to such planting in the fact that the trees will pleasantly shade the track in summer, shield it from snow-drift in winter, to say nothing of possible mitigation of atmospheric effects upon the iron, according to recent chemical developments.—*Exchange.*

FINE MIXED TULIPS FOR FALL.

CHEAPER THAN EVER.

NEW

AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

COMMISSION SALES-ROOM

—AND—

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns several of which we have the exclusive sale for this Coast.

THE POTATOE PLANTER,

JEBB'S PATENT CHURN,

CHEESE CURD CUTTER

PATENT WEEDING HOE,

LIFTING HAY FORK,

WITH OTHER VALUABLE IMPLEMENTS.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

TREE SEEDS

OF ALL THE VALUABLE KINDS.

Also,

TOBACCO SEED.

COTTON SEED.

COFFEE SEED.

TEA SEED.

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER, Fruit and Ornamental Seeds.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

FLOWERING BULBS.

RARE AND CHOICE KINDS

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

Please remember that Lawns can be made so as to be perfect at any season of the year.

FINEST MIXED LAWN GRASSES,

PACEY'S PERRENNIAL RYE GRASS,

ITALIAN RYE GRASS,

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit attractive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for first insertion; twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SPECIAL, TO ADVERTISERS ABROAD.

Advertisers of other States who wish their Advertisements to *appear promptly* must bear in mind that the MONEY must come with the advertisement to insure its insertion.

The cash, or its equivalent, a satisfactory reference must *come* with the advertisement.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* of *our Journal*, to which we would direct their *special* attention.]

Our special European Letter will be found of peculiar interest to our Farmers, as they can get a good insight into the practical workings of agriculture in France and on the Continent from the sketches given in these Letters.

Our happy correspondent from New York gives us a pleasant message from "Long Branch," the "Beach" and the pleasant drives around the great city, and environs of that wonderful city.

We have received the Pamphlet containing the full address of Hon. Marshal P. Wilder, delivered at the Pomological Society's late Annual Meeting at Richmond, Virginia, on the 13th. We shall hope to *publish it entire* at earliest date, as a very important and valuable address.

We are indebted to the courtesy of Messrs. Macondray & Co., for valuable Catalogue of the extensive Nursery and Plant Houses at Dobroden, Ashfield, Sydney, N. S. W.

The Catalogue contains many new plants not yet grown here, to which we shall call attention. We return thanks for the favor.

We have also received from Messrs. Hooper Brothers & Thomas, Chester Hill Nursery, Westchester, Pa., their Semmi-annual Trade List.

We have also the Catalogue of Messrs. Peters & Hatch, the well known and popular Nurserymen o Memphis, Tennessee.

Agricultural Implements, Vegetables, Manufactures, Ploughing Match, New Fruits, next week—with No. 1 Reviews of Fairs.

Good Medicine from Alhambra, accepted.

SEE NEW ADVERTISEMENTS.

Crockery Warehouse, Cashmere Goats, New Seed, Hotels, &c.

Busy at Fairs. What time we can give with feeble health, we devote now to the Fairs, to note the progress that is making in the developments of our State and Coast. We crave due indulgence for any omission of outside matters and correspondence during our absence from office.

THE POTATO PLANTER.

We call special attention of our Potato-raisers to the Patent Potato Planter which is advertised by us.

There is no raiser of Potatoes of any amount who cannot save more than half the entire crop of planting by using this new and valuable Planter.

They can be seen at the FARMER Office.

OUR AGENTS.

We would caution our Subscribers and Patrons not to pay moneys to any Travelling Agent or stranger purporting to act for us, unless they can show WRITTEN AUTHORITY FROM US.

We give this notice because we learn that persons have called on our Patrons in some sections who have no Authority so to do, and desiring to detect all such imposters we shall be glad of immediate information of any such persons who thus turn up

WARREN & CO.,
Ed. & Prop. CALIFORNIA FARMER.

CROPS, SEASONS, PROSPECTS, &C.

The autumnal season shows a great amount of cloudy and windy weather, all indicating early rains, in fact rains have fallen in many places already, and many natural indications are that we shall have a goodly share of rain fall this winter.

The farmers of our State are full of hope that we shall have a wet season, for on this hope they build to make up for past losses of one or two bad years and they say another bad or dry year would be most unfortunate for them.

We sometimes feel that this last dry winter has and will prove a "Blessing in disguise to our Farmers" for it has certainly done more to arouse them to a better system of cultivation than ever before, and to awaken them to the great importance of "Deep Culture," "Summer Fallow," "Subsoiling," "Enriching the Soil," and other vital doctrines than has been practiced before.

The crops and their values are now subjects of thought and study among our producers, and Grain growers, Wool-raisers, Vine-growers, Orchardists, Wine-makers are all more carefully studying cause and effect, production and price, labor and its reward, than ever before, and these are essential elements of success not only to these enterprises but to all enterprises, as these we have named are the bases of Manufactures and the Mechanic Arts and all prosperity. It is a good thing to have our producers read, study and think, for success will follow.

The crops of 1871 if not so large in amount have been very productive in values, for Grain, Wool, Leather, Hops, and many other products have realized large prices that will swell the value to a satisfactory figure, while the future sale of our leading staples give no good a promise that the planting area of the next crop will be immense in all our crops, not only in Grain, the Vine, but Hops, Fruit trees, especially Oranges, Lemons, Nuts, Olives, &c., with new crops, such as Cotton, Ramie, New Zealand Flax, Rice, Hemp, Flax, Castor Beans and other products that have been fully tested.

The Wool market nearly bare—Fall crop mostly sold only a few lots here and then.

We think the prospect was never better, never so good for our Farmers and Stockmen and producers generally, as at the present shows.

SUMMER FALLOWING.

There has been quite a large area of land put under Summer Fallow, as it is called by some of these cultivators if mere scratching the ground 3, 4, or 5 inches could be called so. 'Tis true this land *has* been *fallow* this year, and if planted without a better and more thorough cultivation, will be fallow next year, for it will not, cannot bring a crop, as we took pains to examine many lots of such land, and 4 or 5 inches down the soil was as hard as a rock, and whatever rains may fall, will not penetrate such soil but run off or be absorbed by the sun and the crops perish. Summer Fallow to be made available, should be thoroughly done; the best system ever practiced is as follows, and any soil that can now be plowed if so done will pay well for doing it.

All land that is to be planted should be plowed deep, 8, 10, 12, or 16 inches—as deep as possible—and in so plowing every furrow turned should have a return furrow or back furrow, and thus leave the land in ridges; when the rain comes it will completely *soak* all the plowed soil, and the excess will fall in the deep furrows and go down into the soil as a reservoir for the crop while growing, but land plowed and left level the rains beat down the soil, the rain lays on the surface till drank up by the sun and is lost to the soil, but plowed as we suggest the whole soil would be wet down 12 to 20 inches.

When the season comes for planting, this land should be plowed across the ridges, harrowed well the seed sown and again harrowed and the work is done, and land *thus prepared* will give a crop 25 *per cent. larger* than by any other system.

Lands that are workable can now be plowed this way and left to receive the early rains with great benefit.

COTTON GROWING.

The Cotton exhibited by Buckley & Brother at the Stockton Fair of which we have spoken, was samples of a field of 75 acres, planted rather late, April 27th to May 4th, as the seed arrived late, yet the crop looks promising. Mr. B. informed us that they are picking from 1000 to 1500 per day, their crop is estimated at 3 to 500 lbs. per acre, but if it had been planted in early season would have yielded 5 to 600 pounds per acre.

The growing of cotton, says Mr. B., requires only about the same care and cost as Corn, while the crop value would be double or treble, and more than double that of wheat.

California has many advantages over the South in raising Cotton—in the South they have the Cut-Worm, Army Worm, Boll Worm, and Lice, and also liable to great injury by rains—none of these troubles are here, our dry climate being very much in our favor in perfecting and gathering the crop.

UPPER SACRAMENTO FAIR.

The Fair of the Upper Sacramento Valley hold their Fair at Chico next week, beginning on Tuesday and continuing all the week.

This region of country has not felt the "Dry Season" have had splendid crops and should make a grand show of Grains, Dairy Stock, Produce, &c., as this rich section is getting rich, and Farmers are doing grandly.

FAIR AT PETALUMA.

The Sonoma District Fair at PETALUMA commences on Monday next and will continue till Saturday. The Managers have been hard at work and every effort has been made to have a good District Fair. The Petaluma region of country, and their extensive Wine region should show splendid Grapes and Fruits as well as Wines and make a good Fair.

State Fair at Sacramento.

THE CITY CROWDED.

If numbers of people and a world of people, almost rushing to the Fair, denoted success, then the present State Fair may be put down a grand one, for loaded cars, rushing carriages, stage coaches, horsemen and people on foot, all hurrying to the Pavillion and the Park, gave the assurance that *these* was the *grand centres of attraction.*

Sacramento has never before had such a crowded city. We remember the great crowd of 1854 at the first great races, and every fair since, but never before have we seen Hotels, Streets, Pavilion, Park and every portion of the city so thronged as the present year, and if numbers will give success, then write it down—SUCCESS, for a *pecuniary success it must be.*

THE DISPLAY AT THE STOCK GROUNDS.

The *Stock Grounds* and the *Race Track* was the chief point of attraction morning and afternoon, although we have never before seen the Pavilion so crowded during the day time as the present year.

The amount of stock at the grounds was unusually large and of superior kind and more thorough bred than in former years, and with less inferior stock than ever before. This we note as one redeeming feature of the present fair. Exhibitors are now convinced that it *don't pay* to bring everything to the Fair; the *grades* are too plenty and *full-bloods* will outnumber the grades, although California can show very superior grade stock of every kind, in some cases almost equal to fulls in other States.

CATTLE.

The Exhibition of Durham and Devon Cattle has never been surpassed in our State before. The fine stock of Smith & Overheiser of Stockton; of Col. Younger, of San Jose; of G. N. Seezy, of Marysville, with the Imported Stock of Col. Saxe, all attracted crowds of visitors and very great interest.

The show of French and Spanish Merino's and Cotswold and of Southdown Sheep was very large and very fine; no finer has ever before been shown in our State.

The principal contributors were Smith & Overheiser of Stockton, with French and Spanish Merino's; Col Saxe, with his flock of large Cotswolds; J. McConnell with his Spanish Merino's; H. A. Rawson, of Tehama, with Cotswolds; Wm. Blacow, French Merino's and—

GOATS.

The Cashmere Goats were shown in numbers, and Gilmore, of El Dorado, made a fine display, and of very beautiful animals, no finer ever shown. The same exhibitors show elegant robes and fleeces, no finer goats have ever been shown.

SWINE.

The show of Swine was very excellent, and in good numbers. B. S. Thompson made a large display, all Berkshires, among them many with superior points of excellence.

Charles Green, of Rio Vista made a display of Berkshire and of Essex, all well bred and fine Swine.

Col. Saxe had several carloads of Swine arrive late, but they were wearied and did not show well.

Mr. Finley has a few Chester Whites and Berkshires, this class of Scotch was very good.

POULTRY.

An unusual large display of Poultry was made this year. The leading feature was the fine array made by the California Poultry Association, exhibited by J. T. Finley, Manager. The show was a fine one, being the best breeds of the Company, comprising Light and Dark Brahams, Houdans, Buff Cochins, the Gold and Silver Spangled Seabrights, with Bantams, &c., also, Rouen Ducks and other fine birds.

There were collections, smaller, by several other contributers, all fine varieties

The place of display was rather confined we think, for so large a lot of birds they require open space and free air, and room for visitors to see all.

A show of Madagascar or *Lop* Eared Rabbits attracted much notice for their curious appearance.

THE HORSE SHOW.

This was *the* feature that *drew*, for that noble animal as he paraded on the track in the GRAND PARADE was worthy of admiration, for there were very many fine animals that drew buzzes of applause, as they proudly passed by, seemingly conscious that they were indeed "Beautiful animals."

Among the most noted were Norfolk, Lodi, Speculation and Monday, with many very superb Horses, and with Sires and Dams and their colts made a truly fine display.

But the chief point of the expectant crowd at the track, (to-day) was to see the long looked for WONDER, the Horse that gives promise and hope to be the Horse that shall *Beat the World for speed*, and stand unrivalled even before the famed Horses of the now unrivalled "Bonner."

This famous "Wonder" is the Horse now owned by Gov. Stanford, never yet fully tried, but coming from the famed "St. Clair Stock," his power is relied on and his bottom known. That his horse will work *wonders* we have no doubt, and that he will beat Dexter, of this we have full faith, that is is written in the "Heraldry of the future."

We had a good look at Wonder in his private stable, and our belief is, he is the horse that will do all that is asked or expected of him.

The crowds at the Race Track was never so great, all that could reach the track were there, and we should think the number would count over *Ten Thousand per day*, we have never seen such a rush before.

THE PAVILION.

The Pavillion this year has been much improved and the general appearances good. The immense crowd that fill the halls both day and evening prevents the opportunity of seeing or an examination of articles minutely.

The display is that general miscellaneous character that is usual at our State Fairs, and now so general, of sending goods there as a display and as a medium of making them known for *personal* good rather than for general utility and the advancement of the real purposes of the Fair.

One of the attractive features of the Fair was the Artists Show, among which rank first the Pictures of Judge A. B. Croker, they being valuable works of art from abroad, became the cynosure of all eyes, and claim great and decided attention and approbation.

It is very evident that the people demand a better attention to the all important matters of an AGRICULTUAL FAIR, by having more articles exhibited of a strictly practical and useful kind, and less fancy and sale goods, and although the Pavillion contains too much of this character this year, yet there has been a vast improvement upon last year, and thus the present Exhibition may justly be said to be much better in all its general display than it has been for several years.

The interior of the Pavillion above and below has in all its departments a much better taste displayed than for years past. While many articles exhibited this year are of a very superior kind such as can be applied to practical uses with great advantage.

FRUIT.

The Exhibition of Fruit this year is far better than for several years past, and creditable to all the Exhibitors, as it is evident that contributors see clearly that *ordinary fruit* will hereafter not be allowed to be shown, or if shown no notice will be taken of the same.

A NEW FEATURE IN OUR FRUIT SHOW.

A most remarkable feature of the Fruit Exhibition at the State Fair are the Samples of Fruits from several of the Old States East, among the State contributors conspicuously in the centre of the Hall are Massachusetts, New York, Illinois, Kansas, Michigan, Virginia and Connecticut.

Among the various samples that number several hundred are many of superior beauty and excellence and although some of the samples may have decayed a little and most can be surpassed by our own growers, yet the kind interest shown by the friendly exhibitors in these different and distant localities, make all their Fruit appear indeed, like "*Apples of Gold in Pictures of Silver*," and we recognize that in the collection from New York the ready hand and cheerful offering of the distinguished Nurserymen of Rochester, Messrs. Ellwanger & Barry, while from the "Old Bay State," Massachusetts, (God bless her), we see in the Fruit from thence the ready aid of the noble Marshall P. Wilder, the Veteran and Venerable head of American Horticulture, who seems to come to us with his beaming face and an outstretched hand holding these golden missives, saying—"Massachusetts and our Sister States greet our California Friends," and these valued contributions this year are indeed a Grand Sermon, full of proud texts for the future, enforced by earnest prayer for us to labor on to develope our resources and coming from such a source it comes to our senses as pleasantly as

"The Benediction that follows after Prayer."

We shall take copious notes during the balance of the week and report the most noteworthy, speaking of each as they merit. We can say we were much pleased to note improvements in several departments. This is the demand of the public voice.

THE RACES.

The races were well and fully attended and the receipts at the door and at the Pavilion all indicate prosperity—this year pecuniarily.

PREMIUM ON DRIED APPLES.

Messrs. Herman & Hirsch authorize us to say for them that they offer a prize of five dollar dress pattern, or shawl of the value of five dollars to the person receiving the premium of the Agricultural Society at the coming State Fair for the best fifty lbs. of dried apples. Their intention is to produce an emulation in furnishing a superior article of dried fruit, and their object is very commendable.

We clip the above from the Oregon *Statesman* of the 13th, and while we approve this action as commendable on the part of the Merchants, we would ask merchants in every place if they do not think they would very greatly advance their own interest and the interest of our farmers and of the State, if they should offer SIMILAR PREMIUMS for the best Dried Fruits of all kinds.

Such action on the part of our merchants would make their own place of business the very head quarters of trade, and enlarge their business beyond their conception. Who among our MERCHANTS IN SAN FRANCISCO will be the first to offer encouragement in this way. Whoever will act thus we will *Advertise* their Premium List free of charge.

ENTERPRISE, ENERGY, COURAGE.

Our neighbor of the Contra Costa *Gazette* recently met with one of the misfortunes that often meet the best in life. Fire burnt up their office, type, press and all, and their loss was $2,000 and upwards—*no insurance.* But nothing daunted they came to the city and worked off a sheet in due time to meet their regular issue, and at once secured a new office, and are now at home at work, and sending forth their regular issues. We sympathize with our neighbors in their loss, and we like the *grit* which shows *little troubles* don't dismay them. We hope they will soon make up their loss, and next time fire comes find them *Insured.*

STEAM ENGINE IN THE STREETS.

One of the noticable features of the State Fair was the Steam Road Wagon at the Race Track going at the rate of about *three miles* per hour and doing great work.

CHILDREN AT TABLE.

We believe in children. We believe they have rights all men and women are bound to respect. Among these rights is the right to learn table manners. Whenever the circumstances of the parents will permit them to invite a guest, they can lay an extra plate. Your children should be introduced to your guests. Preparatory to this, or to be always ready, each child should be accustomed, *always*, to keep itself tidy. Soap and water, combs and brushes, for faces, hands and heads, cost little. Every child and person on the premises, if honorably dealt with, will have them, and a place for them; also, a tooth-brush, and be required to use them, failing to do so, banished from the table until the rule is complied with. Clean aprons naturally follow. Table napkins are as necessary, that garments and tablecloths may not be unnecessarily soiled. Really, when you consider the work of washing and ironing an extra table-cloth, and learn that napkins used at every meal, will save one cloth a week, you will be likely to take the napkins. By rings or letters they can be marked. A divided tray-basket or box can be arranged, that knives and napkins may be carried in the same hand. Clothes may be patched or very mean and poor, but these provocations to politeness will have a salutary effect.

Whoever sits at the head of the table should as carefully consult and serve the smallest child (not an infant) as they would a stranger. "If you please," and "thank you," and "no, I thank you," sound just as respectful from little children as they do from strangers. Carefully accustom your children to all these little things, and you will never have reason to be ashamed of them away from home, or at home.

CONVERSATION

At table should be cheerful—light rather than calculated to awaken discussion or thought. It may require self-control, but it is wise to let care and perplexing topics be ignored, never introduced at table. You would feel outraged if a *serpent* were served you in place of a piquant sauce. Forgetful of this, many a *sarcasm* is allowed to spring into table conversation, sharper toothed than a real serpent. Against the serpent every person would make common defense. Let us be as careful to banish from table-talk everything that is unpleasant. To this end, the more frequent the presence of genial guests, the better for your children—may we add, for yourselves, wearied fathers and worried mothers?

Please take the testimony of one who has been a guest in thousands of families—the plainest food, pleasantly served and seasoned with good will, is more acceptable to a guest, than costly viands where these are lacking.

A BOQUET OF ITEMS.

At all the Western and Southern Agricultural Fairs very liberal Premiums are given to Horticulture and Floriculture, and specials to Home Adornment.

The people of Illinois are giving considerable attention to the cultivation of Lemons and Oranges.

The editor of the Arkansas Journal says: "Where our office was two weeks ago now runs the Mississippi river. Out of respect for the father of rivers, we left."

Clark Mills, the sculptor, offers a fac simile of his equestrian statue of Gen. Jackson, in New Orleans, to the State of Tennessee for $16,000. This statue was originally made at the suggestion of a Tennesseean, and the first price asked was $25,000.

Mr. C. L. Allen, of Queens, L. I., has a flower-farm of seventy acres, where, during the last season, were 150 varieties of peonies of different colors, 100 000 lilies in bloom at one time, and nearly 1,000,000 specimens of gladiolus. He has now growing 150,000 tuberoses. The taste for flowers is largely on the increase, rendering their culture an important branch of business.

Art has contributed a new toy for the amusement of children—"a *fac'simile* of a toad escaped in a little house at the end of an oblong platform. He is impassive and apparently incapable of motion; but tempt him by placing a penny on a stand at the opposite end of the platform and with the speed of lightning he springs forward, seizes the penny and swallows it."

IS SHE NOT BEAUTIFUL?

We have recently received from Mad. Demorest their Premium Picture bearing the above *true expression*, as it alludes to the happy picture of two lovely children, and while one is looking at you with a lovely smile, the elder sister, still a young child, lovingly presses her little hand on her cheek, and making her little sister's mouth pout prettily. Such scenes contain gladsome joy; "isn't she pretty?" The picture is a gem.

FARMERS, COME SEE US.

Farmers, Stock Raisers, Vineyardists, Florists and all who are interested in the cause of Agriculture, Horticulture and Floriculture, are respectfully invited to call and pay a visit to the FARMER OFFICE when they come to visit San Francisco, especially as we have much to offer them.

All the leading Agricultural newspapers in the Country are on file for their perusal.

Farmers will find a large *Library* upon every branch of Science, Herd Books of Stock, and we shall always have some samples of Choice Seeds for every one of our Subscribers and Patrons that call.

Strangers from abroad will always be made welcome, and all and every information given them of LANDS, and FARMS *for Sale.*

The MUSEUM of the FARMER OFFICE will show them many Rare and Curious things of the early day of CALIFORNIA, and *specimens* of its *History* and *Resources.* We Bid all Welcome.

STATE FAIRS.

THE STATE AGRICULTURAL SOCIETY FAIR AT SACRAMENTO,

Commencing Sept. 18th, and continue six days
C. F. Reed, President, Maj. Beck, Secretary,
T. H. Hoag, Assistant Sec'y.

A CARD.

TO EASTERN ADVERTISERS.

We feel it our special duty to notify our Advertisers in all the Eastern States, that if they desire to reap the *Full Benefit* of their advertising that

NOW IS THE TIME TO BEGIN.

In is all important to Californians who desire to *Import from the Eastern States* their

Trees, Seeds, Implements or Merchandise,

that they should know where to find them *month* before they are to be used, so they can by a Correspondence with the parties know *who can satisfy them them to the best advantage.*

Those Dealers in any articles they desire to Introduce into the Pacific Coast, should by all means begin early. Soon our season of PUBLIC FAIRS commence, and this is a time when our Journal is scattered widely, and thousands sent out in the Cause of the Fairs and to promote our Industry, and all these will advantage ADVERTISERS.

The advertiser that begins early is the one that takes the lead in the business, and now is the most auspicious as for CALIFORNIA will Import everything that is

NEW AND DESIRABLE

cost what it will, and those Business men who are up and doing, *Manufacturers* of Implements for Farmers Sellers of Live Stock, Seeds, Plants, Trees, Garden Tools, Agricultural Books, &c., &c., should now be ready to send out their messages and let our people know what they have to sell.

The CALIFORNIA FARMER now enters upon its

THIRTY-SIXTH VOLUME,

and can give to all a BETTER CHANCE for PURCHASERS than any other medium, as we go *directly to those* who would purchase.

New Yorkers can send their advertisements to our Advertising Agents, G. P. Rowell & Co., others directly to us. See Terms in our Columns.

Address WARREN & CO.,
320 Clay st., San Francisco.

Home Miscellany.

SEED-TIME.

Grief is a rain, to fall
Upon us, one and all,
Like needful showers they make the dry earth mellow;
For autumn days will come—
The roots of love is numb,
Its sweetest blossoms all are sear and yellow.

And then a quick regret
Will harshly seem to whet
The ploughshare of misfortune, while it burrows
Along its cruel way;
And glossy locks grow grey
And lusterless beside the new-turned furrows.

Old Time comes on amain—
A farmer with his grain,
Experience he sifts between his fingers,
As up and down he goes.
Search, Time, along the rows;
Lest in the path a weed of evil lingers!

His cunning skill is such
He seeks with careful touch
The seeded grove with softest soil to cover;
Yet Time, thou hast not art,
But in some bruised heart
Long traces of thy husbandry will hover!

O, busy husbandman,
How perfect is thy plan!
Behold the harvest! For thy careful flinging
Of little curious seed
Shall come a crop indeed;
Lo! peace, and trust, and every virtue springing!

THE GREAT HEARAFTER.

'Tis sweet to think, when struggling
The goal of life to win,
That just beyond the shores of time
The better years begin.

When in the nameless ages
I cast my longing eyes,
Before me, like a boundless sea,
The great hereafter lies.

Along its brimming bosom
Perpetual summer smiles,
And gathers like a golden robe
Around the emerald isles.

There in the blue long distance,
By lulling breezes fanned,
I seemed to see the flowering groves
Of fair old Beulah's land.

And far beyond the islands
That gem the waves serene,
The image of the cloudless shore
Of holy heaven is seen.

Unto the great hereafter—
Aforetime dim and dark—
I freely now and gladly give
Of life the wandering bark.

And in the far-off haven,
When shadowy seas are passed,
By angel hands its quivering sails
Shall all be furled at last.

DEATH.

It is death alone that can suddenly make man to know himself. He tells the proud and insolent that they are but objects, and humble them at the instant, makes them cry, complain and repent, yea, even to hate their fore-passed happiness. He takes an account of the rich, and proves him a beggar, a naked beggar, which hath interest in nothing but in the gravel that fills his mouth. He holds a glass before the eyes of the most beautiful, and makes them see therein their deformity and rottenness, and they acknowledge it. O eloquent, just and mighty Death! whom none could advise, thou hast persuaded; what none hath dared, thou hast done; and whom all the world hath flattered, thou only hast cast out of the world and despised; thou hast drawn together all the far-stretched greatness, all the pride, cruelty and ambition of man, and covered it all over with these two narrow words, "Here lies."—*Sir Walter Raleigh.*

A USEFUL LITTLE ROCKING-CHAIR.

"Well," said a straight-backed, straight-legged chair to a cosy little rocking chair by whose side it chanced to be placed, "before I would be such a drudge as you are, I would be a stool, or, if possible, something still more insignificant. People are not content with making you nurse every person, be they big or little, but you must also be continually rocking them to and fro."

"To be sure," answered the little rocking-chair pleasantly, "I am always busy and on the go, for the gratification of others; but thereby have I won for myself many friends, and appear to be a great favorite with all. This well repays me for all my trouble." And so it is with persons; those who cheerfully and willingly do for others are the ones who gain for themselves many friends. —*The Guiding Star.*

Do not be frequently changing from one form of business to another, since you will lose much time in making these changes. A rolling stone gathers no moss.

THE MANAGING WIFE.

Ezra Newton has just finished looking over his yearly accounts. "Well," asked his wife, looking up, "how do you come out?"

"I find," said her husband, "that my expenses during the last year have been thirty-seven cents over a thousand dollars."

"And your income has been a thousand dollars?"

"Yes. I managed pretty well, didn't I?"

"Do you think it managing well to exceed your income?" said his wife.

"What! thirty-seven cents?" Said Mr. Newton, lightly.

"Not much, to be sure, but still something. It seems to me that we ought to have saved instead of falling behind."

"But how can we save on this salary, Elizabeth? we haven't lived extravagently. Still it seems to have taken all."

"Perhaps there is something in which we might retrench. Suppose you mention some of your items."

"The most important are house rent, one hundred and fifty dollars, and articles of food, five hundred dollars."

"Just half."

"Yes, and you'll admit that we can't retrench there, Elizabeth. I like to live well. I had enough of poor board before I married. Now I mean to live as well as I can."

"Still we ought to be saving up something against a rainy day, Ezra."

"That would be something like carrying an umbrella when the sun shines."

"Still is is well to have an umbrella in the house."

"I can't controvert your logic, Elizabeth, but I am afraid we shan't be able to save up anything this year. When I get my salary raised, it will be time enough to think of that.

"Let me make a proposition to you," said Mrs. Newton. "You say that one-half of your income has been expended on articles of food. Are you willing to allow me that sum for the purpose?"

"You guarantee to pay all bills out of it?"

"Yes."

"Then I will shift the responsibility upon you with pleasure. But I can tell you beforehand you won't be able to save much out of it."

"Perhaps not. At any rate I will engage not to exceed it."

That's well. I shouldn't relish having any additional bills to pay. As I am paid every month, I will at each payment hand you half the money."

The different characters of the husband and wife may be judged from the conversation which has been recorded. Mr. Newton had but little prudence or foresight. He lived chiefly for the present, and seemed to fancy that whatever contingency might arise in the future, he would somehow be provided for. Now, trust in Providence is a proper feeling, but there is a great deal of truth in the old adage that God will help those who help themselves, and in proportion as they are disposed to help themselves.

Mrs. Newton, on the contrary, had been brought up in a family which was compelled to be economical, and although she was not disposed to deny herself comforts, yet she felt that it was desirable to procure them at a fair price.

The time at which this conversation took place was at the commencement of the second year of their married life.

The first step which Mrs. Newton took, on accepting the charge of the household expenses, was to institute the practice of paying cash for all articles that came under her department. She accordingly called on the butcher and inquired:

"How often have you been in the habit of presenting your bills, Mr. Williams?"

"Once in six months, was the reply.

"And I suppose you sometimes had bad bills?"

"Yes, one-third of my profits, on an average, are swept off by them."

"And you could afford, I suppose, to sell somewhat cheaper for ready money?"

"Yes, and I would be glad if all my customers would give me a chance to do so."

"I will set them an example then," said Mrs. Newton. "Hereafter whatever articles shall be purchased of you will be paid for on the spot, and we shall expect you to sell as reasonable as you can."

This arrangement was also made with others, who, it is, is scarcely needful to say, were very glad to enter into the arrangement. Ready money is the great support of trade, and a cash customer is worth two who purchase on credit. Fortunately Mrs. Newton had a small supply of money by her which lasted till the first monthly installment from her husband became due. Thus she was enabled to carry out her cash plan from the beginning. Another plan which occurred to her as likely to save expense, was to purchase articles in large quantities. She had soon saved enough from the money allowed her to do this. For example, instead of buying sugar a few pounds at a time, she purchased a barrel, and so succeeded in saving a cent or more on the pound. This, perhaps amounted to but a trifle in the course of a year, but the same system carried out in regard to other articles yielded a result which was by no means a trifle. There were other ways in which a careful housekeeper is able to limit expenses, which Mrs. Newton did not overlook. With an object in view, she was always on the lookout to prevent waste, and to get the full value of whatever was expended.

The result was beyond her her anticipations. At the close of the year, on examining her bank book—for she had regularly deposited whatever she had not occasion to use, in one of these institutions—she found that she had $150, besides reimbursing herself for the money used during the first month, and having enough to last another.

"Well, Elizabeth, have you kept within your allowance?" asked her husband at this time. "I guess you have not found it so easy to save as you thought for."

"I have saved something, however," said his wife, "but how is it with you?"

"That's more than I can say. However, I have not exceeded my income, that's one good thing. I find that I have exactly spent all. But I can't see how you have saved anything. We have lived full as well, and I don't know but what better, than last year, when we spent five hundred."

"It's knack, Ezra," said his wife, smiling.

She was not inclined to mention how much she had saved. She wanted some time or other to surprise him with it when it would be of some service.

"She may possibly have saved up $25," thought Mr. Newton, "or some such trifle," and so dismissed the matter from his mind.

At the end of the second year Mrs. Newton's savings, including the interest, amounted to three hundred and fifty dollars, and she began to feel quite rich.

Her husband did not think to inquire how she had succeeded, supposing, as before, that it could be but a very small sum.

However, he had a piece of good news to communicate. His salary had been raised from a thousand to twelve hundred dollars.

He added, "As I before allowed you one-half my income for household expenses, it is no more than fair that I should do so now. That will give you a better chance to save up a part of it than before. Indeed, I don't know how you have succeeded in saving anything thus far."

As before, Mrs. Newton, merely said that she had saved some thing, without specifying the amount.

Her allowance was increased to six hundred dollars, but her expenses were not proportionally increased at all, so that her savings for the year swelled the aggregate sum in the savings bank to six hundred dollars.

Mr. Newton, on the contrary, in spite of his increased salary, was no better off at the end of the third year than before. His expenses had increased by a hundred dollars, though he would have found it difficult to tell in what way his comfort or happiness had been increased thereby.

In spite of his carelessness in regard to his own affairs, Mr. Newton was an excellent man in regard to business, and his services were valuable to his employers. They accordingly increased his salary from time to time, till it reached sixteen hundred dollars. He had steadily preserved the custom of assigning one-half to his wife for the same purpose as heretofore, and this had become a habit that he never thought to inquire whether she found it necessary to employ the whole or not.

Thus ten years rolled away. During all this time Mr. Newton lived in the same hired house, for which he had paid an annual rent of one hundred and fifty dollars. Latterly, however, he had become dissatisfied with it. He had passed into the hands of a new landlord, who was not disposed to keep it in the repair which he considered desirable.

About this time a block of excellent houses were erected by capitalists, who designed to sell or let them as they might have an opportunity. They were more modern and much better arranged than the one in which Mr. Newton now lived, and he felt a strong desire to move in one of them. He mentioned it to his wife one morning.

"What is the rent, Ezra?" inquired his wife.

"Two hundred and twenty-five dollars for the corner house, two hundred for either of the others."

"The corner one would be preferable, on account of the side windows."

"Yes, and they have a large yard besides. I think we must hire one of them. I guess I'll engage one to-day; you know our year is out next week."

"Please wait, Ezra, till to-morrow before engaging one."

"For what reason?"

"I should like to examine the house."

"Very well; I suppose to-morrow will be sufficiently early."

Soon after breakfast Mrs. Newton called on Squire Bent, the owner of the new block, and intimated her design to be shown the corner house. The request was speedily complied with. Mrs. Newton was quite delighted with all the arrangements, and expressed her satisfaction. "Are these houses for sale or to let?" she inquired.

"Either," said the owner.

"The rent is, I understand, $225."

"Yes; I consider the corner house worth at least $25 more than the rest."

"And what do you charge for the house to a cash purchaser?" asked Mrs. Newton, with subdued eagerness.

"Four thousand dollars cash," was the reply; "and that is but a small advance upon the cost."

"Very well, I will buy it of you, added Mrs. Newton quietly.

"What did I understand you to say?" asked the Squire, scarcely believing his ears.

"I repeat, that I will buy this house at your price, and pay you the money within a week."

"Then the house is yours. But your husband said nothing of his intention, and, in fact, I did not know"—

"That he had the money to invest, I suppose you would say. Neither does he know it, and I must ask you not to tell him for the present."

The next morning Mrs. Newton invited her husband to take a walk, but without specifying the direction. They soon stood in front of the house which he desired to live in. "Wouldn't your like to go in?" she asked.

"Yes; it's a pity we have'nt got the key."

"I have the key," said his wife, and forthwith walked up the steps and proceeded to open the door.

"When did you get the key of Squire Bent?" asked her husband.

"*Yesterday when I bought the house,*" said his wife quietly.

Mr. Newton gazed at his wife in profound astonishment.

"What on earth do you mean, Elizabeth?" he inquired.

"Just what I say. The house is mine, and what is mine is thine. So the house is yours, Ezra."

"Where in the name of goodness did you raise the money?" asked her husband, in amazement still as great as ever.

I haven't been a managing wife for ten years for nothing," said Mrs. Newton, smiling. With some difficulty Mrs. Newton persuaded her husband that the price of the house was really the result of her savings. He felt, when he surveyed the commodious arrangements of the new house, that he had reason to be grateful for the prudence of his managing wife.

INFLUENCE OF IMAGINATION UPON HEALTH.

Alexandre Dumas published some time ago, in a daily paper, a novel, in which the heorine, prosperous and happy, is assailed by consumption. All the slow and gradual symptoms were most graphically described, and great interest was felt for the heorine.

One day the Marquis Dalomieu called upon him.

"Dumas," said he, "have you composed the end of the story now being published in the ——?"

"Of course."

"Does the heorine die in the end?"

"Of course; dies of consumption. After such symptoms as I have described, how could she live?"

"You must make her live. You must change the catastrophy."

"I cannot."

"Yes, you must; for on your heorine's life, depends my daughter's."

"Your daughter's."

"Yes; she has all the various symptoms of consumption which you have described and looks mournfully for each number of the novel, reading her own fate in your heroine's. Now if you make your heorine live, my daughter, whose imagination will be deeply impressed, will live too."

"Come a life to save is too great a temptation to be resisted.

Dumas changed his last chapter. His heroine recovered and was happy.

About five years afterwards Dumas met the Marquis at a party.

"Ah, Dumas," he exclaimed, "let me introduce you to my daughter; she owes her life to you. There she is."

That fine handsome woman, who looks like Joanne d'Arc?"

"Yes. She is married, and has had four children."

"And my novel had four editions," said Dumas, "so we are quits."

THE DIFFERENCE.

One young lady rises early, rolls up her sleeves, goes into the kitchen to get breakfast or insists upon doing so, afterward with cheerful and sunny smiles, puts the house in order without the assistance of "mother." She will make a good wife and render home a paradise. Young man, "get her." Another young lady is a parlor beauty, pallid from company, dissipation and want of exercise, reads novels and almost dies of laziness, while the poor old mother does her washing. She is a useless piece of furniture, and an annoyance to the husband she may chance to "rope in," and will go whining to her grave. Young man, "let her alone!"

Meditation is prayer's handmaid, to wait on it before and after the performance. It is a plow before the sower, to prepare the heart for the duty of prayer, and the harrow to cover the seed when 'tis sown. As the hopper feeds the mill with grist, so does meditation supply the heart with matter for prayer.—*Gurnall.*

RICE AND MILK AND HARD WORK.

A health reformer was told that he could not keep up with the crew of men through haying on his "sick folks' baby diet." He replied, that he could go through the two weeks of haying on *rice* and *milk* and endure the labor as well as any man in the crew. The whole company ridiculed him.

"They laughed, 'twas well; but the rule applied
Soon made them laugh on the other side."

He went through the entire haying season with only rice and milk for nourishment, and to the astonishment of all, did more work and endured it better than any other man in the company. They had supposed that rice contained but little nourishment, was suitable only for sick people students, etc., but were surprised to learn that there is on earth but one other article of food (oat-meal) containing more nourishment to the pound than rice.—*H. E. Cornell.*

Baked Potatoes.

Potatoes are more nutritious baked than they are cooked in any other manner, and they relish better with those who have not been accustomed to eat them without seasoning. Wash them clean but do not soak them. Bake them as quickly as possible without burning in the least. As soon as they are done, press each potato in a cloth so as to crack the skin and allow the steam to escape. If this is omitted, the best potatoes will not be mealy. They should be brought immediately to the table.

FIRE! RUIN, OR SAFETY.

If owners of Farm Houses, Barns and Granaries in the country do but read the continuous fires that spread ruin everywhere, they will not sleep another night without securing themselves against Ruin by instantly getting insured. Why worry? better go at once and secure a Policy of Insurance at the Pacific Insurance Co., and then sleep easy, knowing *all is safe*, and Ruin warded off.

THE BURDETT

CASES NEAT and DURABLE.

INTERIOR WORK Unequalled.

ORGAN.

What they are thought of by the leading organists of the Pacific Coast:

"Superior to any instrument of their kind."
Mr. GEO. T. EVANS, the well known Composer, and Organist of the Church of the Advent, S. F.

"Recommend the Burdett for superiority of tone, delicacy and power, and in every respect far ahead of all other reed instruments."
Mr. S. D. MAYER, Organist of St. Johns Church, Oakland, Cal.

"After trying the Burdett, I take great pleasure in adding my voice to the many already sounding their praise."
Mr. H. B. BOSWORTH, Organist of Calvary Church, S. F.

"Far ahead of all I have ever heard or tried."
J. W. C. RHIND, Organist of Howard Street M. E. Church, S. F.

"Examining the "Burdett Organs" I was greatly and agreeably surprised at finding such variety, delicacy and power."
R. J. McCABE, Organist St. Francis Church, S. F.

"Consider the Burdett the finest of reed organs."
CHAS. H. HOFFMAN, Organist of the Mason Street Synagogue

"The most effective reed instrument for Church, School or Parlor."
J. MULLER, Organist St. Ignatius Church, S. F.

"A decided novelty and great improvement on the many styles now in use."
GEO. SCHUCKE, Organist of the Methodist Church, San Jose

"Surpassed my expectations of a reed instrument and comprises everything needed from the solemn music of the church to the popular music of the day."
EVERETT POMEROY, Organist of the Presbyterian Church, San Jose.

"They excel anything of the kind I have ever seen before."
Mr. JAS. F. LAWRIE, Santa Clara

"Their volume and purity of sound is far superior to any reed instrument I have ever seen, and combinations most perfect."
D. H. BERLIN, Professor of Music, Stockton

"The combinations, power and delicacy in all sizes are surprising, and I cheerfully recommend the Burdett."
W. CARMICHAEL, Organist of St. Marys Church, St. Louis

☞ Our descriptive price list now ready. Schools, Churches, Lodges, etc., will be dealt liberally with, and accommodation extended to responsible buyers. Address GRAY'S MUSIC STORE, Agents for the Pacific Coast, 622 and 625 Clay Street, San Francisco.

35.3

MILLS' SEMINARY.

REV. C. T. MILLS AND WIFE, FOR THE PAST six years Principles of the Young Ladies' Seminary at Benicia, are happy to announce to their patrons and friends that the next term of their well-known Institution will open

Wednesday, Aug. 2d,

In their NEW, COMMODIOUS AND BEAUTIFUL BUILDING just completed at

SEMINARY PARK, BROOKLYN.

As most of the able and experienced corps of teachers, with valuable accessions, as well as the fine classes of pupils now pursuing their studies, remove with them, the school remains essentially unchanged.

With greatly increased facilities for physical comfort and intellectual culture, and without additional expense, Mr. and Mrs. Mills believe they can accomplish much more for their pupils in the future, than they have been able to do in the past, and that their Institution offers unrivalled advantages for a thorough and finished education.

All communications relating to admission, and all letters of inquiry, should be addressed to

REV. C. T. MILLS, D. D.,
35.23 Brooklyn, Alameda county, California.

Santa Clara College, S. J.

SANTA CLARA, CAL.

Conducted by the fathers of the Society of Jesus

THE TWENTY-FIRST ANNUAL SESSION OF THIS Institution will commence on MONDAY, August 7th, 1871.

TERMS—Tuition in the Classical and Scientific Departments; Boarding and Lodging; Washing and Mending of articles; School Stationery; Medical Attendance and Medicines; Fuel, Light, Baths, etc., per session of Ten Months,.....$300

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Maraschi, S. J., St. Ignatius Church, Market street, between Fourth and Fifth, San Francisco.

34-1 REV. A. VARSI, S. J. President

THE

HOWE SEWING MACHINE CO'S

Sewing Machines

Have become celebrated the world over. The work done by these Machines is unsurpassed, sewing the thinnest muslin and the heaviest goods with equal facility, and requiring no extra adjusting for uneven thickness or passing over seams.

THE ATTACHMENTS

For Hemming, Felling, Braiding, Cording, Quilting, Tucking, Binding, and Gathering,

Are of the Latest Improved Patterns, and are superior to those used on any other machine.

THE HOWE MACHINES

Are the Strongest and Simplest, and seldom or never give any trouble in operating.

The Howe Sewing Machines

Are the oldest established in the world (Mr. Howe being the original inventor) and are in advance of all others in improvements and protection of mechanism. They have invariably won the highest honors at the great exhibitions of the world, and are universally acknowledged to be the best in use.

Miscellany.

CURIOUS INSTINCTS OF THE BEE.

Honey bees are governed by instinct and not by art. They never deviate from the course they were created in. The first comb they ever built was as perfected as at the present day; no art has improved the shape or size. One bee lays all the eggs, while the others raise the young and protect them; each bee does part of the labor in gathering in the flores and nursing the young; and I have noticed for some years past their mode of gathering pollen or bee bread. It is this:—When a bee goes out after food, it alights on some kind of flower and gathers a part of its load; then goes to another of the same kind, and perhaps a third, to obtain a load. Another bee goes out and if it alights on another kind of flower it keeps to that kind tills it gets a load. You go to the hive and watch them as they come in; some have yellow pollen on their legs; others have light color; others have dark; but no bee has two colors on his legs. If you see any you will see more than I have, for I never did; and I have supposed that they stored it in different cells for a change of food. The other day in overhauling a hive, I broke out a new piece of comb and found the different colors, in different cells, which confirmed my belief; for I suppose they like a change of food as well as humans.

Another curiosity is their coming out and alighting before going off; for amongst the hundreds that I have hived I never had one swarm leave direct from the hive. Another curious thing is their rearing the males and nursing them so tenderly; and after they become useless they destroy them. But instict has directed them to do it. Another curious thing is that, when they get to be too numerous, the mother bee should call out a part of the brood to go with her and leave the others to take care of the young. Why not call them all out to go with her? Because instinct has ordered it otherwise. Certain ones go out with her while others are coming in with stores for future use. A certain part of them don't seem to have any inclination to follow the mother bee, nor do they mourn the loss for another is provided.

How wisely the Orentor has arranged every part and movement is curious, too how the eggs in the drone cells are all drones, and those in the worker cells are all workers. We would suppose they would get mixed up like hen's eggs. Again, when they want a queen why not make a mistake sometimes and take a drone egg? And also by feeding a certain kind of food, make a queen instead of a worker. Again, the queen before she is hatched is head downwards, which would seem to be unnatural; but the All-wise has made every part perfect.—*A. Wilson, in Rural New Yorker.*

SALT FOR BEES.

I have been raising and managing a small stock of bees for the last ten years, and I find the use of salt a great benefit to them. I salt each hive regularly once a week as I do my cattle. One tablespoonful of salt to each stand of bees will do. The hive must be raised about ½ inch high from the bench or stand. This enables the bees to have free access to the salt that I throw or scatter under the hives. The hives are raised from the bench by placing a small piece of stone under each corner. I never have had the moth to trouble my hives since I have adopted the plan of salting my hives. The bee raiser will find it of great benefit to salt his bees once a week. It saves bees the labor of hunting salt in the busy part of the season.—*A Practical Farmer in Christian Observer.*

HOW TO DISPOSE OF VALUABLES.

If I was possessed of the most valuables things in the world, and was about to will them away, the following would be my disposition:

I would give to my wife and children a life insurance policy on my life, so that an ample, secure and certain competency may be provided for them when I shall have passed away.

I would give to the world truth and friendship, which are scarce.

I would give an additional portion of truth and honesty to lawyers, merchants and traders.

I would give to the physicians learning and skill.

I would give to printers and publishers of newspapers their promptly.

To all gossiping women shore tongues.

To young ladies good sense, modesty, medium sized waists, natural teeth and color.

To young sprouts and dandies, common sense, little cash, and much hard labor.

To old maids, smooth faces, good tempers and good husbands.

To old bachelors, love for virtue, children and wives.

To the self-religious, Bible charity for others.

To boys, becoming modesty and a disposition to profit by the experience of older persons.

ITEMS.

Indianapolis has a merchant who has been in business over fifty years and never advertised a line. His profits average about fifty cents a day.

There are lots of the same kind of men in San Francisco, who don't make twenty-five cents.

The bees throughout the world, as known collectively to the richest cabinets, number about 2,000 species.

Never get another to do for you what you can just as well do for yourself. Money thus paid out is thrown away.

Be content with a legitimate business and let speculation alone; and in the end you will be a richer man.

A quaint old Scotch proverb runs thus: "An ounce of mother is worth a pound of clergy."

Printers consider every letter a capital one which contains a remittance.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 600 miles without requiring to be re-greased on the road.

☞N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.,

Is on the red cover of the packages

Money and Exchange Table.

Exchange on England	108½@108⅝
Price of Gold	114⅛@114⅜
Value of Greenbacks	87½@88⅜
Value of Wheat in Liverpool	12s. 6d.
do do New York	160@170 bush

Price of Money in Eastern Cities.

New York—Money very abundant and rates as low as 2@3 per cent. per annum on call, at 4@6 on time paper.

Boston—Money very plenty, 3@5 per cent. on call, 5@6 on time.

Chicago—Money capital employed 4@6 per cent. on call, 6@8 on time.

Money in England.

Bank of England rates 2 to 2½ per cent, heavy supplies, money very easy in business circles.

GRAIN AND FLOUR MARKET.

Our Grain market has been experiencing some excitement, but we said last week that we believed the market had reached its zenith, so it proves thus far, for grain has fallen in Liverpool some 3d., and we believe it will recede more there, although circumstances here may keep up present rates, or send it higher still, but it is very certain that it cannot be sent to Liverpool *without a loss* by direct shipment, and we think it is only sent to give *freight* money rather than have ships lay idle.

Sale of Flour continue to be made for shipment to China, and as the quantity now being sent is steadily increasing this may keep up the rates of Wheat and Flour that otherwise would fall but for this great outlet, as Oregon has a fine harvest and of very superior grain this year, and Oregon will ship to China from her own ports direct this year.

Thus far this season only some half a dozen entire cargoes have been sent to Liverpool, while last year it was nearly *forty*, this is owing to our rates being above a possibility to ship without loss.

As we said repeatedly, the amount of acreage will be so largely increased this year, that an exceeding large amount of wheat will be retained in the interior to sell for seed, this will enhance its value, although there is more in the country than is estimated, as holders are chary of telling all they know, grain-holders are getting sharpened by their contact with speculators.

Barley, Oats, Rye, Buckwheat and Corn, are all in better demand and better prices by reason of the advance in Wheat and Flour.

Hay, Feed Grains and Straw are in better request and prices firm and steady.

The Root Crops, Potatoes, Onions, &c., are very plenty and prices low, yet better than two weeks since

Hops prove a profitable crop this year having advanced largely in value, old Hops have also advanced.

Cosmopolitan Hotel,

SAN FRANCISCO,

CHANGE OF PROPRIETORSHIP

H. H. PEARSON,

LATE OF THE RUSS HOUSE,

Having bought the interest of Messrs. Tubbs & Patten, of the Cosmopolitan Hotel, has secured a lease for a term of years of this well known and elegantly furnished Hotel. His previous reputation assures it being kept in first class style, while in order to keep pace with the times he intends to make important reductions in the scale of charges. His intention is to make it a family and business house, while his large connection with the traveling public warrants him in expecting a large amount of country, Pacific coast and Eastern patronage.

The prices will range from two to three dollars a day for ordinary accommodation. Board by the week or month as per contract. The table will be kept on the most liberal scale and many improvements introduced. The spacious reading room is the finest of its kind in the city, while the furniture and fittings generally are superior to those of any hotel in San Francisco. The house will be thoroughly overhauled.

Mr. PEARSON assumes proprietorship this day, August 1st. 306

PRICES REDUCED

TO SUIT THE TIMES

—AT THE—

AMERICAN

EXCHANGE HOTEL.

FIRST-CLASS TABLE BOARD:

Per Day	One Dollar
Per Week	Six Dollars
Per Month	Twenty-Five Dollars

BOARD AND ROOM:

Per Day	from $1 50 to $2 00
Per Week	from $8 00 to $14 00
Per Month	from $30 00 to $60 00

According to the Size and Locality of the Rooms. Prices for Families Reduced in the same ratio. Terms—Payable by the Day, Week or Month, in advance.

REDUCTION IN PRICE

AND

Liberal Club List

With a desire to place the CALIFORNIA FARMER in every family on this Coast we have concluded to make a

Liberal Reduction in Price,

and to place it at such a sum as that every Cultivator of the soil could have it.

We have announced the Terms in another columns, and here we give additional inducements to our patrons and friends to not only subscribe for the Farmer, but to secure other valuable Publications at a moderate price also.

We make this announcement for the express purpose of meeting the wants of a large increasing Agricultural population, and a large emigration that will soon be coming to our shores, who need the information of our resources, and we feel we can serve our State in no better way than to give to these new comers the

CALIFORNIA FARMER

at a very reasonable sum, so that every family can have a copy.

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar,	$13,50
The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid	$7,50.

THE WAY TO LABOR EASILY.

A scholar may be able to write in a dogged manner, with a determined resolution to grind out a given task at all hazards. So a person may put whip and spur to his over-worked and dragged-out energies, and engage in manual employments as the sullen culprit goes scourged to his irksome labor. But that is a very unsatisfactory way to perform literary labor. If one must sit with pen already dipped, and woo his ideas and tumble his dictionary for suggestive words, he will be very apt to write and erase, to change and alter repeatedly before the sluggish thoughts can be satisfactorily expressed. Thus it is also with manual labor: If we cannot engage in it as the buoyant urchin bounds away to the playground, everything will drag heavily. If the thoughts do not come rushing across the orbit of the soul in rapid succession, as the fleet shadows of summer clouds chase each other over the landscape, lay the pen and paper aside, touch no newspaper or book, and walk or ride out in the park, the fields, or grove for an hour or more. Throw off all anxiety and care, let down the tension which has held the entire system up to concert pitch for many days, and try to feel that you have nothing to do for three hours. Then, after an invigorating relaxation, dip the pen, and the well-arranged thoughts, in most appropriate language, will flow along as smoothly as excellent ink from the pen when writing on parchment. After writing one hour, drop the pen in the middle of a paragraph, and recreate for fifteen or twenty minutes by the clock; after which, resume the writing, always exercising rigid authority over self, to stop entirely before the monitor within says every faculty has been overdone.

A manual laborer who will apply himself faithfully for eight successive hours, with a half-hour's intermission, will accomplish much more, and feel better, than if he were required to drag a hoe for fourteen or sixteen hours. The housekeeper who would perform a great day's work, without overdoing, must stop and rest for ten or fifteen minutes every hour. If a person can accomplish but little—who is ever in a hurrying and always behind—will sit or lie down perfectly idle for an hour, or until he or she feels that labor would not be irksome, and, when the clock indicates a certain hour, have the mind prepared to do something, he or she would be surprised to see what a pleasure there is in various industry, and how much can be accomplished when one feels right. The great difficulty with most writers and manual laborers is *overdoing*. He who goad his already overtaxed energies to write hour after hour, when the faithful monitors within have repeatedly given the alarm that he has applied himself far beyond the limit of propriety, will find, when it is too late, that he has been burning the candle of life at both ends. He will not overdo, can perform surprising tasks. It is not the vast amount of labor in the aggregate that prostrates one's physical and mental system; but it is the habit of overdoing in the performance of every task.—*The Technologist.*

To cure a dog of sheep-killing, let him see the sheep he has killed; in his presence take off the pelt, fasten it tightly around him, make him wear it from one to three days. We think you will never be troubled by his meddling with sheep again.

WHERE TO BUILD A RESIDENCE.

No matter is of greater importance to a family man than the choice of a residence; and the result of any mistake, in this particular, is strikingly set forth in the following extract from a paper on "Consumption in America," from the *Atlantic Monthly* for January, 1869, by Dr. Bowditch:—

"We know of two families in Massachusetts of whom the following story may be told. Two hearty brothers married two hearty sisters. Both had large families of children. One lived on the old homestead, on the southern slope of one of the numerous beautiful and well-drained hills in that vicinity. The whole house was bathed all day long in sunlight, and consumption did not touch any of the young lives under its roof. The other brother placed his house at a very short distance off, but upon a grassy plain, covered all summer with the rarest verdure. In its front was a large open 'common.' In the centre of this, water oozed up from the split hoofs the cows, as they came lowing homeward at evening; and the barefooted boy, who was driving them used to shrink from the place, and preferred to make the circuit of its edge rather than to follow the lead of his comrades. Back of the house was a large level meadow, reaching to the very foundation of the building. Through this meadow sluggishly crept the mill-stream of the adjacent village. Still further, all these surroundings were enclosed by hills. The life-giving sun rose later and set earlier upon the other fair homestead. Until late in the forenoon, and long before sunset, left the chill-side home, damp and chilling emanations arose from the meadow, day after day enveloped the tender forms of the children that were *trying in vain to grow* up healthily within them. But all effort was useless. Large families were born under both roofs. Not one of the children born in the latter homesteads escaped, whereas the other family remained healthy; and when, at the suggestion of a medical friend who knew all the facts we have told, we visited the place for the purpose of thoroughly investigating them, we thought that these two houses were a terribly signification of this all-powerful law. We might speak of other homesteads which seem to us now to be the very nests of consumption in consequence of this law."

WHAT THE WORLD IS DOING.

Just now, when the political and moral condition of the world is so seriously disturbed, and when it seems as if evil influences were never so active and powerful, the utterance contained in the following paragraph, from the *Union and American*, have a suggestiveness calculated to set reflecting persons to serious thinking:

"All the kingdoms in the worlds are in agitation and solicitude. Revolution and anarchy threatens every one of them. There have been wars, and new ones are breeding. There are more perturbations among men. Suicides and all manner of crimes and wrong doings are abounding beyond example. There are fearful accidents by sea and by land. There are earthquakes in these last few years, beyond all example in history. There are furious tempests in the air, in regions that counted themselves exempt from the like. Frightful accidents, defying human foresight, are multiplying. Unnatural crimes are more prevalent than histories of our ancestors have ever, even by exaggeration, recounted. In the East—whence plagues comes to our shores—in Persia, we read of frightful scenes of famine and pestilence together. Among thoughtful minds there is a foreboding of calamities soon to come on our country. The pride, the fullness of bread, the abundance of idleness, was never more marked in Babylon or in Tyre, than in our Babylon and Tyre of the west, New York—and all towns and villages and railroad stations of the country are but New York extended. This proud, this voluptuous, this unbridled people, are calling on Heaven for a visitation."

PICK UP THE NAILS.

Harper's Weekly says: Complaints are frequently made to the officers of the Society for the Prevention of Cruelty to Animals that valuable horses are injured in consequence of having their feet pierced by nails thrown into the street. A short time ago a carman carried into Mr. Bergh's office a large bag of nails, which he said he had picked up in ten minutes outside two large fancy dry-goods stores in Franklin Street. He stated that the packing-cases were all opened on the sidewalk and the nails thrown into the roadway. His horse had been rendered useless for several weeks in consequence of having picked up nails in the fact. During the past three months, twenty-one valuable truck horses have been killed, owing to their becoming unfit for further use from the same cause. The iron penetrating the frog causes the flesh to fester, and eventually the roof rots off. It is evident that nails should not be thrown into the roadway; but if they are, somebody would do a pretty good business, and also serve the cause of humanity, by gathering them up.

THE COW'S INTELLIGENCE.

The London *Milk Journal* says:—That cows have memory, language, signs, and means of enjoying pleasant associations, combining for aggressive purposes, have been recognized, but scarcely to the extent the subject merits. Traveling in Italy many years ago, we visited some of the large dairy farms in the neighborhood of Ferra. Interspersed among much of the low lying, unhealthy land, remarkable for the presence on it of very fatal forms of anthrax, in the Summer season, are fine undulating pasture lands, and the fields are of great extent. We happened to stop at a farm house one fine Autumn afternoon when the cows were about to be milked. A herd of over one hundred was grazing homewards. The women took their positions with stool close to the house, and as the cows approached, names were called out which, at first were, we thought, addressed to the milk maids. Rosa, Florenza, Gidla, Sposa, and many names, which were noted by us at the time, were called out by the overseer, or one of the women, and we were astonished to see cow after cow cease feeding or chewing the cud and make direct, sometimes, at a trot, for the woman that usually milked her. The practice we found was not confined to one farm; all the cows on each farm knew their respective names, and took up their positions, just as readily as the individual members of some large herds in this country from fields to take up their places in the sheds.

FOOD AND WATER.

In this department much error has crept in. The habit of ignorant hired men is often to make the time requisite for giving the food to suit their own convenience rather than the necessities or health of their horses. When brought to the stable it is a common custom to first take the team to the water trough, and allow them to distend their stomachs with an immense quality of well water. This is as bad as can be. The horses want water, it is true, but it is best to give only a few mouthfuls to refresh them, then give a little hay, and in a quarter of an hour grain of any kind can be given in almost any reasonable quantities, without any chance of injury. After eating, water may be given with impunity to any extent. Where horse teams are employed jointly with a number of men, such as railroad work, or the like, they must be fed and ready again to go to work when the dinner hour is over; and for this meal, under these circumstances, chopped hay and ground oats, slightly moistened, form an admirable mixture. I prefer feeding it in this way to teams at all times and seasons, and am quite convinced that much saving is effected and injury to horses avoided. With this mixture horses may be fed with perfect safety, if ever so heated, provided there is not too much grain among the hay.—*N. E. Farmer.*

THE SOUTHERN STATES.

If the Southern United States are not the garden of the world, it is rather the fault of those who are responsible for their cultivation and development, than from any natural inferiority to any other land on the face of the earth. It occurs to every mind that this is the chief products which civilization demands. Cotton, sugar, and tobacco are products of such immensity as to dwarf those which other lands bring forth, and yet these are not all. Vast quantities of wheat and rice are exported, and luxuriant but uncultivated vegetation besides testifies to the immense resources which are forthcoming. These Southern States comprehend an area of territory equaling that of Great Britain, France and Germany. Watered by the grandest rivers, and rich in every variety of soil with millions of acres of swamp yet unreclaimed, there is a future for this district which will make it a territory to which all the world will turn for its vegetable supplies."—*The London "Chemist and Druggist."*

OUR AGRICULTURAL COLLEGES.

The college presidents, professors, and others engaged in teaching agriculture, have recently held a meeting at Chicago, and dignified it by the name of the "Agriculture Educational Convention." The great difficulty with our Agricultural Colleges is that the men who control them do not seem to know what they want. They seem to be actuated rather by vague yearning after something unknown, than by a desire to achieve a definite and really important object. Thus, at the convention recently held, it was decided, that, next to a series of meteorological observations, the great want of the agricultural community is a series of mechanical experiments on the strength of materials! Why did they not suggest that a series of investigations be made into the accuracy of our present chemical equivalents? These subjects are well enough in their way; but it seems to us that agriculturists, as such, have far more pressing demands upon their attention, and have no occasion to wander off needlessly into the province of the engineer or the theoretical chemist.—*The Technologist*

THE WINE PRESSES AT WORK.

Great preparation are going on all over our State among the Vineyardists for the gathering and crushing the Grape. Grape-growers are getting their Wine Vats, their Casks and their Machines for picking and stemming the grape, and from all sections of the State it is well understood, the crop will be very large—much larger than last year and far beyond any previous year.

The quality of the wine made this year will also be superior to all former years, as more pains will be taken to excel in the processes of wine making, and this added to the better experience, will secure better results.

Among the large Vineyardists and Wine-makers of our State, the Los Angeles *Star* reports as follows upon

WINE MAKING BY STEAM.

This season, at the extensive wine-making establishment of Don Mateo Keller, on Alameda street, a ten-horse-power steam engine will be used to drive one of Wadham's patent grape stemmers and crushers of sufficient capacity to stem and mash fifty tons of grapes per day. With this machine, which is a Los Angeles invention, the grapes are cleaned, stemmed and mashed without breaking the seeds, and dropped into a larged trough beneath. It is the intention of Mr. Wadhams to add a press to his machine next year, and to extract the juice from the grapes as fast as they are mashed; both press and crusher to be worked by the same motive power. We understand that this year Don Mateo will make over 200,000 gallons of wine and will commence operations on the 2d or 3d of next month.

In addition to this at many other Vineyards new and improved Grape Pickers and Crushers will be used, with better casks, more care of them and various improvements in the processes of making and purifying the Wines and Brandies of our State, so as to give it a character and a high name.

GEORGIA PROGRESSING.

No State in our Union is making more progressive movements than our Sister State Georgia, and according to her population and means is doing real wonders in *Agriculture* and Manufactures.

Economist writing to their Journals, on the importance of Fruit preservation, thus speaks about

DRYING FRUIT.

The fruit crop is so abundant this year that a large quantity of it may be turned to best account by drying it, in which shape it always finds a ready market. To get the best price, the fruit must be carefully and *neatly* peeled, the cores extracted, sliced and cured, and not, as is too often the case, only partly peeled or not at all, half cured, and left to dry as well be it can on the dirty roof of some out building.

The scaffold on which the fruit is dried, that is, left for the water to care, should be exposed to a strong draught of air, and as much sun as possible. The scaffold should incline slightly to the south, the fruit cut into thin slices, frequently stirred during the day, and protected from the dew and rain without excluding the air. The more rapid the process of drying the better the fruit, and the prettier the color. If the good housewives of Georgia will take the necessary pains to do the work neatly and properly, they can sell their surplus fruit for money enough to pay for all the coffee and sugar they will consume during the year, besides some nice Sunday clothes for the little ones.

A LARGE CROCKERY WAREHOUSE.

MESSRS. HAYNES & LAWTON'S SALES ROOMS.

These new advertisement in our Columns should receive special attention from our readers. No establishment of this class of Goods in our City can show a larger, finer, or more beautiful collection, indeed none so rare, as the patterns are exclusively made for this house.

The department of Silver Plating Goods is one of interest and value, as by this process old wares are made to appear equal to the new, and at little comparative cost.

A visit to this large Warehouse will always result in pleasure and in satisfaction to purchasers.

PROGRESSION—WOMAN WINS.

The prize of One Hundred Pounds Sterling for the best managed farm in England, and which is annually offered by the Royal Agricultural Society, was taken in 1870 by a woman. This year, another woman takes the third prize over nineteen male competitors. So much for "Woman's Work and Woman's Wages."

FARMER'S WAGONS.

J. D. Arthur & Son, offer our Farmers the famed Michigan Wagons, which for cheapness and durability have won quite a fame, and Messrs. Arthur & Son, now offer them at a very great bargain. See their new Advertisement.

DEATH, A LIFTING UP.

I love to think that what seems to be the mystery of the silence of death, which envelopes so many that we loved on earth, is not really a mystery. Our friends are separated from us because they are lifted higher than our faculties can go. Our child dies. It is the last we see of him here. He is lifted so far above us that we cannot follow him. He was our child; he was cradled in our arms; he clambered upon our knees. But instantly, in the twinkle of an eye, God took him, and lifted him up into his own sphere. And we see him not. But it is because we are not yet developed enough. We cannot see things spiritual with carnal eyes. But they who have walked with us here, who have gone beyond us, and whom we cannot see, are still ours. They are more ours than they ever were before. We cannot commune with them as we once could, because they are infinitely lifted above those conditions in which we are able to commune. We remain here, and are subject to the laws of this realm. They have gone where they speak a higher language and live in a higher sphere. But this silence is not the silence of vacuity, and this mystery is not the mystery of darkness and death. Theirs is the glory; ours is the waiting for it. Theirs is the realization; ours is the immaturity striving to be ripe. And when the day comes that we shall disappear from these earthly scenes, we shall be joined to them again: not as we were—for we shall not then be as we were—but as they are, with God. We shall be like them and him.—*Beecher.*

WORK FOR WOMAN.

Some labor congress, in Missouri, if we rightly remember, lately resolved that females ought to be paid for any labor the same amount for the same work as males. This sounds magnanimous. When the hard fisted sons of toil gather together to consider their grievances and the manner in which they are to be remedied, their rights and the means by which they are to be sustained, and then remembering their poor sisters and fully admit them to the fields of manual competition on the only sensible basis of equality, the equal pay for equal work, we may assume that their councils are controlled neither by fanatics nor by demagogues. The resolution accepts the broad principle that sex should be no bar to labor, nor to the rewards of labor, whether such labor be skillful or not, or however much of intellect may enter into it. It is based on the theory that the whole wide field of human labor is open to all the human race, and that no law, custom or prejudice ought to intervene betwen the laborer and the work to be done on account of sex.

The unsexed harridans and boisterous female speechifiers who stalk up and down through public thoroughfares, proclaiming that political equality which is but little sought for by the gentle sex, have none of our sympathy and no more of our respect than they deserve. In spite of them, and entirely as if they had never disnued the ears of the people with their clamor, we are at liberty to say that all just and justly thinking men are altogether willing that the field of labor in all its departments should be freely opened to such women as from choice or necessity may seek for the labor which is fitting for them.—*N. O. Picayune.*

A SIMPLE AND EXCELLENT CLEANSING AGENT.

Ammonia or as it is more generally called, spirits of harshorn, is a powerful alkali, and dissolves grease and dirt with great ease. It has lately been recommended very highly for many domestic purposes. For washing paint, put a tablespoonful in a quart of moderately hot water, dip in a flannel cloth, and with this simply wipe off the woodwork; no scrubbing will be necessary. For taking grease-spots from any fabric, use the ammonia nearly pure, then lay white blotting-paper over the spot, and iron it lightly. In washing laces, put about twelve drops in a pint of warm suds. To clean silver, mix two tablespoonfuls of ammonia in a quart of hot soap-suds. Put in your silverware and wash it, using an old nail-brush or tooth-brush for the purpose. For cleaning hair-brushes, etc., simply shake the brushes up and down in a mixture of one teaspoonful of ammonia to one pint of hot water; when they are cleansed, rinse them in cold water, and stand them in the wind, or in a hot place to dry. For washing finger-marks from looking-glasses or windows, put a few drops of ammonia on a moist rag, and make quick work of it. If you wish your house-plants to flourish, put a few drops of the spirits in every pint of watering. A teaspoonful in a basin of cold water will add much to the refreshing effects of a bath. Nothing is better than ammonia water for cleansing the hair. In every case, rinse off the ammonia with clear water. To which we would only add, that, for removing grease-spots, a mixture of equal parts of ammonia and alcohol is better than alcohol alone; and, for taking out the red stains produced by strong acids in blue and black clothes, there is nothing better than ammonia.—*The Technologist.*

Agriculture.

A CHAPTER ON CATTLE AND SWINE.

COTTAGE HOME, GA., July 25, 1871.

THE DIFFERENCE IN CATTLE, AND STOCK RAISING.

In the selection of cattle we have two objects in view, to get good milkers, and at the same time beef cattle. That combination is more apt to be found in the short horn breeds, the Devons and Durhams take on flesh very readily, and if well pastured, are pretty fair milkers. But for milk and butter, the Alderneys are becoming the favorites, even among the dairymen at the North, as from the quantity and richness of their milk, the best butter is made, exceeding in quantity and quality that of the Devons and Durhams. Such qualities have placed the Alderney cattle at the head of the list of the cows most wanted for the dairy. The Alderneys, though, are poor for beef cattle, as they take on flesh slowly and sparsingly. But the steers of that breed, (Alderney) although of large frame and rawboned, make good work animals, being strong and durable, and do not suffer from the heat as those breeds that are short and fleshy—they are what some term "long-winded." As such, for farming purposes, the Alderneys may be considered the most valuable, being rich in pairs and free in the yoke. And for the butcher, the Devons and Durhams are the most profitable, as they take on flesh rapidly. The dispositions of the Alderneys are also a great trait of their character, being mild and gentle in temper, showing great patience and forbearance, even under harsh treatment, which makes them so valued as milkers and work animals, and favorites with all. It is well for the South, that a growing interest is being taken in stock. Heretofore, it has been too much overlooked, and merely the commonest breeds of cattle and hogs were kept, and the little attention bestowed on them, did not seem to keep them up to a common standard, but a deterioration was suffered to go on to a scrub stock; hence they became not worth the food it required to raise and fatten them for slaughtering. The beef was made of the poorest quality, gluttinous in substance; and the pork so small and lean, it took at least three hogs to make in meat, after being butchered, what one of fine stock does. Hence the importance of importing fine stock of all kinds into the country, and raising finer animals that will pay better. The finer the stock, the greater interest taken in them, and the interest taken will lead to profitable results. But to raise fine stock, we must have fine pastures. Parts of the farm must be laid down in clover and the grasses, and cultivated with care, for it is as impossible to have fine stock without good pastures, as to expect to live without eating. The barns must be relied on in winter, but in spring and summer, grass is the food to give health, strength and size. Of hogs, the Berkshire and Essex are the hogs for the South. The Chester I have considered as only suited for lard, as there is too much fat for the flesh made, or in other words, it is a hog that runs too much to fat. The Berkshires are an active and industrious hog that thrives well on grass, and requires but little corn—compactly put up, and when fattened, the flesh and lard are in better proportion than with most any other kind of breed. There were some fine Berkshires brought into this county from Kentucky and Tennessee, which was very much needed for stock purposes. Sheep are much wanting, but the fear of dogs deters the farmer from undertaking them. Bad fencing and numerous curs, make sheep a very undesirable stock. We trust the Legislature will abolish fencing and tax dogs $5 per head. Thanks to the railroad train that run over three worthless curs last week, all belonging to one freeman, and lessened their number, even to three, when three hundred could have been spared in this neighborhood, without missing them.

STOCK RAISING SOUTH.—We call special attention to the above Letter from Georgia, of J. H. Dent, Esq., to *The Plantation*. Here is real sensible talk, and it is this kind of practical talk and the work that follows, that will build up the whole South.

The Albany (Ga.,) *News* says: We are now in possession of reliable data from the whole of Southern and Southwestern Georgia, relative to the condition of the cotton crop, and it is our painful duty to report a disastrous failure. This is no sensational announcement, and is not based upon doubtful information. The *best sections* of this portion of the State cannot possibly reach two-thirds of an average crop, while the poorer sections will scarcely exceed one-third. The acreage of the latter being much the largest, the plain deduction is that a half crop will not be realized. Before the recent storms and continued rains, the better lands promised a good yield, but not a full crop. Now the rust is making destructive ravages, and the caterpillar is spreading with fearful rapidity. We have direct intelligence from nearly all the large plantations in the Oakwoods belt, and the concurrent testimony discloses disaster everywhere."

Cramp in horses arises from irregular action of the motor nerves. Rubbing the affected parts with a wisp of hay for ten minutes would be beneficial; and should friction alone not remove the tendency to cramp, the parts affected should be rubbed occasionally with a solution of camphor and olive oil, in the portion of one part of camphor to four of olive oil.

MANGOLDS AS FOOD FOR SHEEP.

To the Editor of the Mark Lane Express:

SIR—It appears to me that one of the most interesting parts of farming is, that one learns a wrinkle or two almost every year. Last year I had an enormous crop of mangold-wurtzels, and although I keep my usual head of stock, they appeared to make scarcely any impression upon my store. I bought fatting cattle, contrary to my usual custom (for I am a breeder of stock) high as they are in price; for I could not bear the thought of my beautiful orange globes becoming a mass of rotten pulp. I advertised one hundred tuns for sale; but instead of selling tuns, I have only succeeded in selling a few hundredweights. To give you an idea of the state of mind we were in, a friend of mine called, and, on looking over the stock, said to my herdsman: "Well, John, how are you getting on?" "All well, sir; only we are distracted about them mangels." I resigned myself to what appeared to be my inevitable fate—that I should have to spread my beauties over the land for manure, never dreaming that when my ewes and lambs were turned out on fresh fields and pastures new, they would look at a mangold; but, to my surprise and delight, they actually prefer the mangolds. They were lambed down on a twenty-acre grass-field, where I kept them eating mangolds and hay as long as I dared, and when I opened the gate into an adjoining forty-acre field, that had not a hoof on it since November, I expected they would not have returned for a considerable period—at least, until the old pasture has been refreshed; but, to my surprise, though they wandered about during the day-time, they invariably returned to pick up any shells of mangolds that might be left. Seeing this, I ordered the supply to be kept up, and now one hundred and twenty ewes, with their lambs, consume a cart-load of mangolds every twenty-four hours, so completely, that they do not leave a piece as big as half-a-crown; and the lambs seem as partial to them as do their mothers.

Wrinkle No. 2.—I used to give my ewes half a pound of oats whilst their lambs were with them, and I invariably found that many of them became ragged, and lost a portion of their wool from their backs and shoulders. My supply of roots being so large, I have this season not given any oats. The result is, that they have scarcely shed an ounce of wool.

Wrinkle No. 3.—Now, as I have found out that you may grow on the same field, year after year, mangolds, not only without deterioration, but with manifest increase (having grown for the last ten years mangolds on a small field of two acres), I grow more and more mangolds. About three years ago, I had about two hundred lambs, three-parts bred. I was obliged to sacrifice one hundred of them at 18*s.* 6*d.* a-piece, for my pastures were bare, brown and dusty; these same lambs were sold at 27*s.* 6*d.* a-piece. Now, if I had had an unlimited supply of mangolds, I find out that I might have put that 27*s.* 6*d.* a-piece into my own pocket, instead of allowing it to go into the dealer's, and been spared the humiliation, when I begged for another sixpence, of being told that he considered he was doing me a great favor in taking them at all, but as I was an old customer, he would do it to oblige me.

Your obedient servant, F. G.

DANGER OF WHIPPING HORSES.

In his work on the "Education of Horses," Prof. Magner says:

I would caution those who train or use horses against exciting the ill will of the animal. Many think they are doing finely, and are proud of their success in horse training, by means of whipping, or otherwise rousing and stimulating the passions, and then, from the necessity, crushing the will through which the resistance is prompted. No mistake can be greater than this; and there is nothing that so fully exhibits the ability, judgment, and skill of the real horse man, as the care and tact displayed in winning instead of repelling the action of the mind. Although it may be necessary to use the whip sometimes, it should always be applied judiciously.

The legitimate and proper use of the whip is calculated to operate upon the sense of fear almost entirely. The affections and better nature must be applied in training a horse, as well as in training a child. A reproof given may be intended for the good of the child, but, if only the passions are excited, the effect is depraving and injurious. This is a vital principle and can be disregarded in the management of sensitive, courageous horses, only at the imminent risk of spoiling them. I have known many horses of naturally gentle character to be spoiled by being whipped once, and one horse that was made vicious by being struck with a whip once, while standing in his stall.

I have referred to these instances to show the danger of rough treatment, and the effect that may easily be produced by ill usage, especially with fine blood horses and those of a highly nervous temperament. Many other cases can be cited as such are by no means uncommon. Sensitive horses should never be left after they have been excited by the whip or other means, until calmed down by rubbing or patting the head and neck, and giving apples, sugar, or something of which the animal is fond. Remember the whip must be used with great care, or it is liable to do mischief, and may cause irreparable injury.

GOOD NATURE.

As welcome as sunshine
In every place
Is the beaming approach
Of a good-natured face.

As genial as sunshine,
Like warmth to impart,
Is a good-natured word
From a good-natured heart.

—*Selected.*

STATEMENT

OF ASSETS OF THE

PACIFIC

INSURANCE COMPANY,

SAN FRANCISCO, CAL.

JUNE 30th, 1871.

CAPITAL STOCK	$1,000,000 00

BLOODED STOCK

For California.

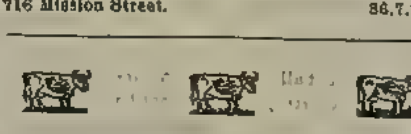
As we have already sold one Car load of Blooded Stock to go to California, and have to send a man along to take care for it, we should like to sell enough to load two or three cars more. This offer to all interested in Fancy Stock and Poultry is a rare chance to have them taken out at low rates. We will insure the safe arrival of all Stock in good order.

Send for Circular and Price.

Address N. P. BOYER & CO.,
Parkesville Chester Co., Pa.

For Particulars we refer to Editor of CALIFORNIA FARMER, who will furnish Circulars, &c. 37.7

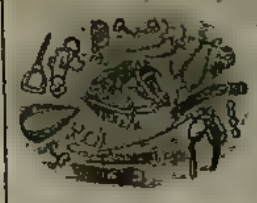
Stock of all Kinds.



Those who have *Blood Stock, Horses, Cattle, Swine,* also *Poultry* of choice kinds should send us a List of what they have for Sale with full descriptions and price, as we can always give to such persons facilities for the ready Sale of all such Stock. Address EDITOR FARMER.

Harness. Saddles.

MAIN & WINCHESTER



Manufacturers AND Importers of

HARNESS,

Saddles, Bridles

WHIPS, COLLAR

SADDLE-WARE, &C..

Nos. 214 and 216 Battery street,
SAN FRANCISCO.

☞ To correct an erroneous impression which some may have, we wish it understood that though we keep the largest Wholesale Stock in the country, small Orders and Retail Customers will receive every attention and benefit that they can at smaller establishments.

FARMERS and others will do well to call on us before purchasing, as the rate of Eastern Exchange justifies us in offering goods at REDUCED RATES.

N. B.—
We have the exclusive sale of HILLS CONCORD HARNESS for the Pacific Coast.

FOR SALE.

A FARM OF 160 ACRES OF LAND

Lying 5 Miles South of Petaluma,

All under good fence, nice Dwellings, good Barn and Dairy, Chicken House, and other Out-Buildings, good Bearing Orchard, with First-rate Water,

AND PLENTY OF SPRINGS FOR STOCK.

Title Perfect.

PRICE $5000.

For further particulars enquire at the Post Office in 36.1 PETALUMA, CAL.

SWEET CHESTNUT TREES.

ONE-HALF A MILLION, BESIDES A Large General Nursery Stock.

A Sixteen Page Circular Free, also a Trade List for Nurserymen and Dealers.

Can send safely to California, Small Trees by Mail and Large ones by Freight or Express.

Address STORRS, HARRISON & CO., 36.1 6m Painesville, Lake Co., Ohio.

JAPANESE SILK WORMS EGGS.

One Hundred Cartons of Japanese Silk Worm's Eggs of very superior quality to be sold very reasonable in lots to suit purchasers.

Apply at the FARMER OFFICE,
320 Clay Street, San Francisco.

Best machine ever offered for paring, coring, quartering or slicing apples. Does the entire work expeditiously, promptly and well—separating core and parings from fruit at once. Will prepare more fruit for drying, pies, or family use than six ordinary parers. For farmers it is indispensable. Fruit can be taken care of in season, instead of allowing it to rot in the orchard. Three times the price of the parer can be saved on every crop. A barrel of apples can be got ready for pies in one hour, saving in labor alone, in a single year, many times the cost of the parer. Territory for sale. Agents wanted. Send for circular.

TIPPECANOE APPLE PARING MACHINE CO., 40 Courtlandt St., N. Y. 36.6

A FINE

"Kentucky Hunter Stallion."

A very splendid Stallion of the "KENTUCKY HUNTER" Blood, Full Pedigree, Five Years old, Sixteen hands high, very fine form, good action, one of the very best STALLIONS now for Sale on this Coast.

This Horse will be sold at a Bargain if applied for soon. This animal is of a Stock and style seldom found for sale, an early application will secure a splendid animal at a Bargain.

Inquire at this Office. 36.5

NEW SEEDS.

THE Conlover Asparagus, new kinds of Cucumbers extra sugar Beet, Long Blood and Turnip-Rooted Beet, Cabbage, Celery, Broccoli, Radish, and Lettuce for successive planting.

For Sale at "FARMER OFFICE."

A GREAT CHANCE FOR AGENTS

Do you want an agency, *local* or *traveling*, with an opportunity to make $5 to $20 a day selling our new Tetrad *Wire Clothes Lines?* They last *forever*; samples free, as there is no risk. SEED OF THE BIG TREES.

Those who desire to procure fresh seed of the BIG TREE of Calaveras or Mariposa for planting, or for sending to friends at the East, can have this seed in neat packages of $1 each.

Apply at FARMER OFFICE.

OIL CAKE MEAL

THE BEST FEED KNOWN

FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 23 9-100 per cent. For life-sustaining properties to all stock exposed to sudden changes of weather or over-driving I am no equal

For MILCH COWS it is particularly valuable, increasing the quantity of milk and giving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food generally mixed with the mash of bran, slops, roots, or any feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($40 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, price at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on the coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

PACIFIC OIL & LEAD WORKS,
NOS 3 AND 5 FRONT STREET,
San Francisco.

TRUE'S

IMPROVED

POTATO PLANTER.

This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops those pieces with the most perfect regularity, and covers them perfectly and does all this as fast as a horse can walk over any ground that can be plowed.

No intelligent farmer can fail to see that an instrument with which one man can, with the aid of a horse, plant six acres of potatos in a day, is of inestimable value because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attention to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Instrument, and a good Mechanic can make a fortune with it. Particulars and Catalogues can be had at our office.

WARREN & CO.,

A NEW ARTICLE.

Composition Pipe for Conducting Water

THE ATTENTION OF RAILROAD COMPANIES, Farmers, Dairymen and others, is called to our new Pipe for leading water. It is lighter than ordinary lead pipe, and much cheaper than iron, will stand a heavy pressure, and deliver about one-third more water than iron pipe, provided the sizes are the same.

We are now manufacturing all sizes, from one-half to two-inch, and can fill large orders at short notice and put on reels for shipment, the same as lead pipe.

Samples can be seen at our office,

No. 11 California Street,

THOMAS H. SELBY & CO.

Horticulture.

THE VINEYARDS OF FRANCE.

The *Wine and Fruit Reporter* of New York in speaking of the condition of the Vineyards of France, says:

A journal apprises us that the Minister of Agriculture is about to make a tour of observation in the South. Our colleague specifies, as the object of the visit, an inquiry into the ravages of the oïdium; but it was doubtless intended to speak of the ravages of the phylloxera, for a little goodsulphur is a vastly more efficacious against the oïdium than all the visits which a whole cabinet could possibly pay. It is true that these visits will not have a very powerful effect on the phylloxera, that insect which is even more rebellious against authority, than reckless of the wars waged against it.

This displacement of the most important agricultural functionary may nevertheless bring a certain result. It will surely serve to concentrate upon the terrible scourge which threatens all our vineyards, the efforts of science and of skill. As in France private enterprise is not often heroic, and prefers leaning upon the arm of an authority which guides it—not always on the right road—to acting for itself, the eminent minister is entitled to our thanks for bringing to the patient's bedside the leading physicians of the age.

We shall prepare ourselves to bear up as courageously as possible under the torrent of reports, expositions, opinions, and discourses, with which we are menaced by the impending ministerial progress. Nothing can be more certain than that if zeal and good will sufficed, nothing could go farther towards effecting so desirable a cure than the interposition of the present Minister of Agriculture.

Be that as it may, the vine is running a serious risk, and it is not too much to apprehend from the concurrence of so many untoward influences the entire ruin of our vineyards. It is said that the remedy is often found side by side with the evil; it is of great importance, therefore, to attend closely to the observations of practical men, which may at any moment detect the means of arresting the march of the disease. We place more reliance on some accidental observation made by a sagacious vintner, than on the most elaborate descriptions of the manners, customs, and affiliations of the terrible insect.

We set great store by the intervention of the learned men; they will expound the misfortune, if they do not remove it; but we cannot forget the remark so frequently made, that the most valuable discoveries have always been the offspring of patient and assiduous practical observation.

BEAUTIFUL IRELAND.

We know of course, that Ireland is called the "Emerald Isle," and the color of the emerald is green, but never had it entered into our imagination that there was anywhere in this world to be seen such verdure as it charmed our eyes to look upon in the rural district of Ireland. The slopes, the knolls, the dells, fields of young grain, over which the breezes creep like playful spirits of the beautiful, the pastures, dotted over with sheep of the purest wool; the hillsides, rising up into mist-shrouded mountains, are all covered with thick carpets of smooth, velvet green. But Ireland should also be called the Flowery Isle. There is not a spot in Ireland, I believe, where blessed nature can find an excuse for putting a flower, but she has put one—not only in the gardens and in the meadows, but upon the very walls and the crags of the sea, from the great blooming rhododendrons, down to the smallest flowret that modestly peeps forth from its grassy cover. The Irish furze, so richly yellow, covers all places that might otherwise be bare or barren; the silkworm delights everywhere, from thousands of trees, to "drop its web of gold; the blooming hawthorn, with the sweet-scented pink, and especially the white variety, adorns the landscape and the gardens; wild flowers, of every hue and variety, clamber to hide the harshness of the moral supports; and beetled cliffs of the North sea are fringed and festooned with lovely flowers; and if you kneel anywhere almost on the yielding, velvety carpet, you will find little, well-nigh visible, flowerets, red, white, blue, and yellow wrought into the very woof and texture. Ireland ought to be called the Beautiful Isle. The spirit of the Beautiful hovers over and touches to loveliness every point.—*Pall Mall Gazette.*

NEW

AGRICULTURAL

BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

COMMISSION

SALES-ROOM

—AND—

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders shall be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charges will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose cash, factory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

We particularly call attention to the

New Agricultural Implements

which we announce in our columns several of which we have the exclusive sale for this Coast.

THE POTATOE PLANTER,
JEBB'S PATENT CHURN,
CHEESE CURD CUTTER
PATENT WEEDING HOE,
LIFTING HAY FORK,
WITH OTHER VALUABLE IMPLEMENTS.

Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

TREE SEEDS

OF ALL THE VALUABLE KINDS.

Also,

TOBACCO SEED.
COTTON SEED.
COFFEE SEED.
TEA SEED.

Silk Culture!

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FOR THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental Seeds.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

FLOWERING BULBS.

RARE AND CHOICE KINDS

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

Please remember that Lawns can be made so as to be perfect at any season of the year.

FINEST MIXED LAWN GRASSES,
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR ORILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

EVERGREEN AND DECIDUOUS SHRUBS,
ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

ORANGES, LEMONS, FIGS,
Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kind

GREENHOUSE AND BEDDING PLANTS.

These are grown at our residence under our own care where they always can be selected.

Any one desirous of having their Gardens look gay throughout the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference

WARREN & CO.

Farmers' Headquarters 320 Clay Street, up-stairs

The California Farmer.

SAN FRANCISCO.

THURSDAY EVENING, SEPT. 28, 1871.

THE CALIFORNIA FARMER READING ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines of less of space, in Nonpareil type, for *one* insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SPECIAL, TO ADVERTISERS ABROAD.

Advertisers of other States who wish their Advertisements to *appear promptly* must bear in mind that the MONEY must come with the advertisement to insure its insertion.

The cash, or its equivalent, a satisfactory reference must come with the advertisement.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* of *our Journal*, to which we would direct their special attention.]

OUR PRESENT NUMBER.

The Steam Press made havoc with the *Title*. "What Five Dollars Paid," a story in our Home Department, worth reading, it shows how much good can be done by the *prompt payment* of little sums. Let every reader carefully peruse this story and then go pay the little sums they owe and see how quick the same money comes back to them as it did to Mr. Herriott, and they will enjoy the luxury of doing good. "True Taste," and "Modern Extravagence" will be found interesting.

Farmers will find valuable Chapters in our Agricultural Department, and Vineyardists will find a Chapter on the "Vineyards of France," of much interest.

NEXT WEEK.

Our "European Letter and "New York" Letters, both very interesting, also Letters from "Berkley" with others received too late for this issue.

COMPLIMENTARY.
